PART I

SUMMARY.

plenty, and, with the exception of an insignificant dis-

THE record of the year is briefly one of peace and

turbance among the Bhils of the Mahi Kantha, profound quiet has prevailed. Crime has decreased and education has progressed. The harvests have been abundant, prices have fallen to a lower level than they had reached for many years, and the condition of the labouring poor has been one of unmixed satisfaction. Indeed, the fall in prices has given rise to an uneasy feeling that cultivation is not remunerative; but if against this is set the fact that cultivation has increased, especially in the Southern Marátha Country, where the traces of famine are rapidly being obliterated, and that the revenue has been collected with ease, and, further, that the rayat has had no occasion to resort to the savkar to mortgage his land, it will be reasonable to conclude that the uneasiness is nothing but the disappointment of being baulked of those high prices

The trade of the port of Bombay has been enormous; and the Prince's Dock, lately a burden upon the Port Trust, has not had accommodation enough for the crowd of steamers that seek to enjoy its conveniences. Capital has been abundant, production has been active, new mills and

which used to prevail. The export trade is progressing by leaps and bounds, and a fair part of this increase is due to the great development of the local trade in cotton and wheat, while the facilities given by the Rájputána Railway have increased the trade of the port by the traffic

Introductory.

of the North-West.

presses have been added to the number in operation, and merchants are known to have had a profitable year. The reproach of possessing a large tract of country unprotected from the horrors of famine is now in course of being removed by the construction of the Southern Marátha system of railways, while the Níra and Gokák canals and the Mhasvad and other tanks will, when completed, add materially to the area which may be cultivated independently of the season. War has ceased, and, suitably to crown a successful year, the last restraints upon trade have been swept away, and the country is now in the enjoyment of an almost ideal perfection in free trade, while the long-deferred promise of an equalisation of salt duties has been fulfilled.

His Exce lency the Governor.

In July 1881 His Excellency the Governor Sir James Fergusson made a short trip to Sholápur, where he opened the water-works for the supply of the town from the Ekrúk Tank, and returned to Poona vid Ahmednagar, taking the opportunity to visit a part of the country he had not seen before. In August he opened the waterworks at Thana and visited Broach to inspect the imposing structure of the Narbada Bridge and to decide upon the site for the junction of the Broach and Jambusar Railway. The Right Honourable Mountstuart Elphinstone Grant Duff landed at Bombay in October on his way to Madras and was received by His Excellency, who soon afterwards, in company with the Honourable Mr. Ashburner, undertook a tour in the Southern Marátha Country, following generally the line of the proposed railway and visiting the irrigation works in progress of construction, when the Cliefs of the Native States through whose territories he passed had an opportunity of receiving and meeting His Excellency at their own capitals. Returning to Bombay in December His Excellency proceeded to Baroda at Christmas to represent the Viceroy at the imposing ceremonial of the installation of His Highness the Gaekwar, and after the festivities visited. Ahmedabad on his way to Cutch and Káthiáwár. His Excellency was charged to present to the Thákor of Bháynagar at Rájkot the well-merited

honour of a K.C.S.I., but at Bhúj received the melancholy intelligence of the saddest of domestic bereavements which recalled him to Bombay. The deep senso of a private sorrow and the genuine and unfeigned grief of the people found expression in numbers of addresses of condolence in which they bore testimony to their appreciation of the high worth and amiable qualities of the good and gentle lady who had passed away, and these sincere evidences of the public sorrow were fully approciated and duly acknowledged by His Excellency, who has since necessarily led a retired life though engrossed with the graver duties of his high position.

The State of I dar has been handed over to its young Chief, who has had the advantage of a training in the Rájkumár College He travelled over the State in company with the Political Officer to learn the methods of administration, and one of his first acts has been to assign, as a free gift, the land which is required for a road to connect Dákor with Modása, on which no transit duties will be levied. The road will be made by Government with a view to relieve the traffic from the strangling effect of the transit duties which are levied in the numerous petty States of the Mahı Kantha. The State of Sunth was restored to its Chief on attaining his majority, and the majority of the Thákor of Wadhwán was anticipated by nearly a year, relying upon his prudence ar good sense. The little State of Mharsál had been removed in 1872 from the charge of the Chief of Sángli, to whom it is subordinate, on the ground of mismanagement, but Government have now seen reason to restore it.

The State of Kolhápur has again la sed to a provisional Kolhápur, Not many years ago a gifted youth sucadministration. ceeded to the government, and died soon afterwards while on a tour in Europe, and with the permission of Government his widow adopted the present Raja, then a bright and intelligent boy; but the promise of a great career has been disappointed by the mental disease under which the young prince is labouring. For many months

States restored to Chiefs.

it was hoped that he would recover, and change of scene and of diversions were tried, but failed to produce any satisfactory effect, until a committee of experienced doctors were reluctantly obliged to admit that here was no longer any hope of recovery. A Regency has, therefore, been nominated, with the Chief of Kágal as President, assisted by three of the chief officers of State, who will transact public business in the name of the Rája, but without the power of imposing taxation, except with the consent of Government. The choice of this Chief, himself a near relation and friend of the late Rája and a well-educated and intelligent person, has proved both popular and successful. The Regent manifests an active interest in the affairs of the State.

It was only natural that the native mind should have been deeply stirred by the misfortunes of the young prince; but in endeavouring to account for a calamity from which no human science or care could save him it is to be regretted that certain Marátha papers should have imputed base motives to the chief officer of the State and should have charged him with having a personal interest in prolonging the illness of the Rája. Accusations so virulent and circumstantial could only be refuted as widely, and publicly as they had been made by an impartial judicial inquiry, which in the end demonstrated the utter baselessnes of the charges, and the calumniators suffered the penalties appropriate to their offence. It would be impolitic to check a fair and candid criticism of the acts of public officers or to appear to use the criminal courts as instruments to stifle the expression of public opinion, but in this case the abuse of a free press was apparent; and although, on its being proved that the documents, upon which the defence relied, were obvious forgeries, the cused persons tendered apologies to the prosecutor, this did not avail with the High Court to avert a suitable punishment.

Administrative Improvements

Turning to the improvements which have been made by Native Chiefs in their estates, the abolition of the custom of forced labour, or rather of customary unpaid labour, in

Cambay may be noticed, and the establishment of a model farm in the Báriya State, which promises to effect much good in that backward part of the country. The practice of adding sper cent. to the revenue due by a defaulter has been abolished in Janjira, and in Jath the opportunity of the direct administration of the State has been taken to abolish a number of oppressive cesses which were necessary. A few years ago this State was handed over to Government indebted and impoverished, with its affairs in inextricable confusion; but, although in the interval it has been scourged by famine, it is now practically free from debt after the discharge of about 5 lákhs of obligations. Its affairs have been reduced to order, reforms have been made in all its departments, and it will now be in a position to spend a suitable proportion of its revenue on the public works which will be necessary in connection with the construction of the Southern Marátha Railway.

An inquiry into alienations is apparently not pecu- Alienations. liar to the British administration, for such inquiries into allowances and into rent-free lands have been carried on in Kolhápur since 1845, although in a desultory way. The proceedings of late have not given satisfaction to the public; and His Excellency Sir James Forgusson, when at Kolhápur, took the opportunity to inquire into these complaints, which has resulted in an offer to recognise all titles to alienations on payment of a small quit-rent, and this offer will probably be accepted and the inquiry brought to a speedy close. • In Sángli inquiries into alienations are almost finished, and in Jath the quit-rents imposed on unauthorised inams have added considerably to the revenue. In Cambay the Nawab has commenced a similar inquiry and is proceeding with caution, while in Cutch the Chief does not he sitate to attach endowments which are indebted, or which are perverted from the uses for which they were set apart.

The survey is now being introduced, wherever practicable, into almost every State. Cutch has been surveyed, and the occupancy right is only conceded to those cultivators who can show that they have improved their estates

Surveys.

by sinking wells or in other ways. In Palanpur similar work has been commenced and in Jawhar it is going on, although slowly. The settlements already made in Kolhápur have added materially to the revenue, and waste lands are rapidly being brought under cultivation. In the Southern Marátha States and especially in Rámdurg it is said that land is being taken up in the hope that the survey rates will be lower than the present rates. Survey is being carried on also in Bhor and Aundh: and in Savantvádi the revised rates, against which the people remonstrated, were thought to be too high, and were reduced. in Bánsda produce less than the old farming system, and in Sachin the work has had to be stopped temporarily, as there was no establishment available. Janjira is also about to be surveyed. In the estates of Thákors and others under the management of Government it is generally found that the rents are too high and press unduly upon the cultivators, and it is proposed to apply the survey settlement to them also.

Forests.

Considerable progress has been made in setting apart land for forests in Native States, and the Chiefs are gradually evincing an enlightened desire to follow the lead of Government in this matter. The I dar State borrowed the services of a forest officer who surveyed the forest lands, and has proposed to set aside 113 square miles as forest. Large reserves have been formed in Sávantvádi, and in Kolhapur all cuttings within five miles of the crest of the hills have been prohibited, and an attempt is being made to put a stop to or regulate kumrı cultivation. Bhor a good deal of land has been demarcated in the Níra and the Musa valleys, but the forests in the Gir, in Káthiáwar, require more attention. In Báriya the forests have been greatly denuded since the approach of the railway, but measures will now be taken to conserve Land has been taken up in 42 villages in Akalkot; and in Jath, which is thinly populated, a great part of the bare hill-sides might be put under forest.

Police.

Crime has greatly decreased both in the number of offences and in their gravity, the stimulant of want

having in a great measure been absent and the gradual development of a better police having also had its effect. In Pálanpur it has been necessary to stimulate the exertions of the village police by enforcing the local responsibility in every case in which the robbers have not been followed in hot pursuit; and in one case, where evidence could not be obtained regarding a local riot in which swords had been used, a fine of Rs. 400 was recovered from the village of Sumao. The internal peace of the States was profound and was scarcely disturbed by anything higher than a street brawl or an ordinary robbery. In one case only did a small body of Jats in Káthiáwár, well armed and mounted, make a rapid descent upon a distant village, but their pursuit and capture were creditably performed by the local police.

It was otherwise with the peace of the frontier. Bhil risings had occurred beyond the border in Meywar and infected this rostless and excitable race. The Chief of Pol, in Mahi Kántha, was besieged for a week in his capital, and concessions were extorted from him and another Cattle-lifting then became common, but was soon suppressed,—the Bhils having lost heart after the repulse of their attack upon Gallora, where they were beaten off by the police with the loss of three killed. Later in the year the carriage of the Political Agent was plundered in the mistaken belief that it contained a large amount of treasure; but, as the robbers were promptly arrested, the excitement and alarm consequent on so daring a robbery died out. Special commissioners possessing long experience of the Bhils were appointed to enquire into the causes and nature of the disorders, and detachments of native infantry were for a time quartered in the disturbed districts. Some of the worst offenders were apprehended and convicted, and villages concerned were compelled to make restitution in kind. Prudent measures were taken to maintain order, and according to the custom of the country the village bards have given their personal security for the peace of the disturbed villages. As any infraction of the bond is supposed to entail the most

Bhil Risings. dreadful torments here and hereafter upon the culprits, it is to be hoped that the religious instincts being enlisted upon the side of order, the lawless habits of the people will be restrained, and an era of order and quiet may now be introduced.

It is difficult to assign any good reason for these disturbances; the harvests have been good and prices cheap, and, moreover, the material condition of the Bhils has greatly improved and they are said to be better off than the Bhils in Khándesh. They live in better houses and their women are better clad and wear ornaments, but perhaps a revival of their old predatory instincts must occasionally be expected in the transition from the nomadic and restless state to the more regular and settled pursuits of agricultural life. In the Rájpipla territory also the Bhils created some disturbance, but this was perhaps due to the misgovernment of the Rája, and the rising quickly subsided on a promise of a patient hearing and inquiry into their grievances.

The case of the Maháráj or high priest of the Vaishnavs in Káthiáwár, who was imprisoned on conviction of complicity in a post-office robbery and disposing of the stolen property, excited the strongest emotion among his followers, and the excitement extended to the city of Bombay, where shops were closed and business was suspended in sympathy with the prisoner. The case is mentioned as a curious instance of how little the popular ideas have been acted upon by the levelling process of English law, which is not a respecter of persons, for a whole community was found clamouring that their priest should be above the law. It is not so long since that the Brahmans were exempt from hanging or whipping; but their peculiar privileges are no longer recognised, and it was perhaps necessary that a great example should serve to impress upon the Vaishnavs the practical lesson of equality before the law.

The members of the Kolhápur Local Corps and the force in Sávantvádf have been allowed pensions for old and approved service—a measure which has greatly increased the popularity, and will probably increase the efficiency of these bodies. In Kathiawar police service used to be rather despised, but of late a very much higher class of men has been seeking to be enrolled. Considering the small pay which is given and the loose organisation which generally prevails, the measure of success which is attained by the police in Native States is fairly respectable.

The prisoners are generally well cared for and confined in good prisons; and some States, of which Bhor is specially mentioned, are said to possess excellent prisons. The only serious prison outbreak which occurred was at Khairpur, in Sind, where the prisoners disarmed a negligent guard; but instead of escaping waited to loot the jail, which gave the Mir's son an opportunity to cut off their retreat and compel them to surrender after a siege of five days.

Criminal Justice.

Criminal and civil justice is generally entrusted to men who have some acquaintance with the law and procedure of British courts, and the tendency is to employ an increasing number of such men. The Chiefs, as a rule, pay great regard to the representations of Political Agents on such matters, and in Pálanpur very great reforms were made in this respect. Rájpipla is the only State in which Government had reason to take notice of the misgovernment of the Rája, and it may be hoped that, before the next year's report is written, the reforms directed by Government will have been carried out.

The perfection of the courts of justice in different States naturally varies according to their wealth and intelligence. In Káthiáwár, besides the courts of the different Chiefs themselves, the Rájasthánik Court for the settlement of the claims of the Chiefs upon their powerful vassals has worked so satisfactorily that the States have determined to continue it until 1885. The change wrought in the habits of the people by the establishment of a system of police and regular courts is so marked that in place of the lawless country it used to be, infected by bandits and

outlaws, it is now as peaceable as an ordinary English district. From such large States as Kolhápur and Káthiáwar, where justice is administered upon English models, we may turn to the arcadian simplicity of Nárukot in which there is no civil court, and the people are so primitive that every offender who was arrested admitted his guilt, or to the little State of Daphlápur consisting of six villages, governed by a widow lady who sits to dispose of cases and suits as a magistrate and judge.

The finances of the different States are generally in

Finances.

a satisfactory condition, Phaltan being to some extent embarrassed, the Chief of that State has applied to be relieved of the management until his debts have been settled, and the Government of India has accordingly sanctioned a loan of 21 lákhs for this purpose. A loan for a similar purpose has also been granted to Kurundvád. In Cambay skilful finance has enabled the Minister to reduce the debt from 5 lákhs to 3 lákhs and to reduce the rate of interest from 12 per cent. to 6 per cent. cyclone of 12th July did unmense damage in Navánagar. and the public loss is estimated at 9 lákhs, which the State can ill-afford to lose, as great efforts are being made to pay off a load of 21 lákhs of debt. In Pálitána thelongpending dispute regarding the payment to be made by the Shrawaks for protection of pilgrims visiting the shrines of Shetrunia has been settled. The charge will now be Rs. 2 a head instead of a lump sum of Rs. 10,000, and this change will probably return a larger profit to the Chief. The abkari or excise system has been generally assimilated in most States to that in force in British India. and Government have arranged to supply the States with opium at a reduced rate of duty or pass-fee, as it is called. In Cutch and Káthiáwár the Chiefs objected to the allowance of one-fifth of the duty, but Government have now been pleased to remit one-third, relying upon the willing cooperation of the Chiefs to prevent smuggling and to carry out the policy of Government. In other States a greater or less allowance has been made according to circumstances, and the policy so far has been highly successful;

A bkári.

in fact the tendency, especially in the Rewa Kántha, is to pply for more opium than can be used in the State itsel. The management of the manufacture and sale of spirits has generally been leased to Government for three years on terms profitable to the States, and the tree-tax has been reduced in Sávantvádi to an amount intermediate between the tax in Goa and in Ratnágiri, to discourage by a graduated scale the practice of smuggling.

The progress in public works is highly satisfactory. In Cutch His Excellency Sir James Forgusson laid the foundation of the Alfred High School, and an expenditure of 3 lákhs evinces a satisfactory activity in public works. The Mándvi breakwater has been completed at great expense, and efforts are being made to deepen the channel, while a new line of coasting steamers runs between Mándvi and Bombay, calling at Káthiáwár The spirited policy of the Thákor of Bhávnagar has earned for him the well-merited honour of & K.C.S.I. In one y ar alone he has spent 23 lákhs on the Bhávnagar Railway, thus nearly completing a most useful work, besides decorating his capital with public buildings at a cost of 3 lákhs. The railway has brought great prosperity to his State, as the increase in cotton shipped from the port of Bhávnagar testifies, and it is gratifying to observe that already it is expected to pay a dividend of 4 per cent. This success has inspired the Nawab of Junagad to project a * 4e to connect the railway with the port of Verával through his capital, and the Thákor of Morvi proposes to join Wadhwan to Rajkot. The latter has introduced the electric light into his new palace. Altogether nearly 50 lákhs was spent on public works in Káthiáwár; several of the Chiefs being busy with their new palaces, but not forgetting roads as feeders to the railway, or schools. The Chief of Navánagar spent 11 lákhs in repairing the damage done by the storm, and Rs. 25,000 was spent on the Girásia school at Wadhwan. The public buildings at Junagad are extremely handsome, and the new hospital building at Bháynagar possesses great architectural merits. *

Public Works. The expenditure in Kolhápur was $7\frac{1}{2}$ lákhs on public works, chiefly on the great storage tanks, the palace, the hospital and roads. The Southern Marátha Railway will pass the town of Kolhápur at a distance of about 30 miles, and the numerous roads already completed must prove eminently useful. About $1\frac{1}{2}$ lákhs were spent on public works in the Southern Marátha States and chiefly in Miraj and Jamkhandi. In Sángli Rs. 41,000 was spent and in Sávantvádi $1\frac{1}{4}$ lákhs.

Education.

Each year is marked by the continued progress of education. In ten years the number of scholars in Cutch has increased four-fold, while in Káthiáwár there are now 630 schools and 36,000 scholars, and in imitation of the Rájkumár College at Rájkot an attempt has been made to establish a Girásia or yeoman school at Wadhwan. It has been fairly successful, the boys being intelligent and possessing frank and easy manners. Kolhápur possesses_ 154 schools and 9,000 scholars. The Rajaram College has never been numerously attended, but the number of families is not numerous in that neighbourhood who can afford the expenses incidental to residence there. The Rájkumár College has done incalculable good; but here, too, the number of young Chiefs available for tuition has lately declined from natural causes. Two brothers of Chiefs went last year to the University of Cambridge, and one intends to remain until he has taken his dogree.

Some interest is being taken in girls' schools, the Chief of Rádhanpur in particular being greatly interested in them, and their number is increasing. There is a large number of indigenous schools in Native States, and the practice in the Mahi Kántha is for each boy in turn to provide the master's food, trifling money presents being given on holidays. A school for young Thákors is proposed to be established at Vajinia in the Rewa Kántha, and the Chiefs are contributing towards the cost. Mussalmán education is very forward in Janjira, where the Mahomedans support the greater number of the 46 private schools, and have applied for assistance to open a girls' school. The Chief of Phaltan feelingly complains of the poverty and

ignorance of his people who do not appreciate the value of education-"Their ignorance, coupled with their poverty, render the work of securing the attendance of their children a very difficult and painful task."

In the extension of education, the prosecution of pub- Progress. lic works, the establishment of regular courts of justicer the entertainment of a police, the adoption of the survey and the provision for the sick, the Native States of to-day are very different from the Native States of some years Mutual feuds and jealousies have been healed and a healthy rivalry in progress has been stimulated and The younger Chiefs have been educated in English colleges, have been trained in manly exercises. and have acquired the manners and feelings of English gentlemen, and now in the government of their States many of them carry into practice the principles which have been carefully implanted into them at school. old order is giving place to the new, and the suspicious and jealous exclusiveness which used to characterise so many of them has been dispelled by the light of a higher knowledge and a wider experience. A few years ago it would not have been possible to have witnessed such a scene as that at Rájkot, where the Chiefs assembled to celebrate the occasion of the presentation to the Thákor of Bhávnagar of the decoration already mentioned. The utmost good feeling and cordiality prevailed, and the Chiefs vied with each other in hospitality and delighted in friendly reunions; and whatever may be said regarding the burden of maintaining princely courts there can be no doubt that their state is in consonance with the feelings and ideas of the people. When their administration is respectable they may even furnish an element of political strength, while they also do something to break up the dead level of native society which is an unconscious effect of British rule. Colonel Barton has also well written:-- "The numerous petty courts and their people form a large body of rich resident landlords spending their rents on their estates; and the ministers, officials and landlords of various station and

wealth contribute to impart a brisk vitality to the progress and general well-being of the country." In the provinces of Kathiawar, of which he speaks, the results of improved administration are specially apparent.

Some of the Chiefs are complimented by the Political Agents. Bhávnagar, in Káthiáwár, is referred to as having achieved the distinction of being the leading State in the province under its enlightened administration. Bhor, in Deccan, is administered by a Chief who in all that comes before him energetically does his duty. Jamkhandi is said to be undoubtedly the best-managed of the Southern Marátha States, and the rule of the Chief of Kurundvád (Junior) is characterised as just and mild.

The acquisition of the lands of Shaikh Othmán, near Aden, has enabled the authorities to reduce the overcrowded state of the Settlement and free it from the presence of a large body of the poorest classes who live from... hand to mouth and who are fruitful causes of disease and crime. A new town has been laid out, and people are induced to go there by the exemption of all rates and The Resident has endeavoured to taxes for two years. keep the peace between the tribes, and succeeded in settling the disputes regarding the boundary between the Abdali and the Fadhli, but he was unable to prevent hostilities between Makála and Shehr, which ended in the supplanting, with the assistance of a British naval force, of the former, who has retired to Zanzibár. The year was unfortunately marked by the outbreak of cholera which fortunately was confined to a portion of the Settlement, but extended to the Arab tribes in the interior.

Surveys.

The admirable series of topographical maps published by Government keep the public informed of the work of this useful department. Their clearness and accuracy are remarkable, and it will not be long before the position of the remotest parts of the Presidency will be accurately determined and the work made available to the public at a moderate price. Already excellent maps of the Deccan districts are available, and about 8,000 additional square miles were mapped during the year, half the

work being done in Cutch and the Southern Marátha Country.

There is nothing particular to remark about the original revenue surveys, which are being pushed forward, chiefly in Kánara, Ratnágiri and Sind, bút it is satisfactory to find that a good deal of work has also been done in the Native States of Kolhápur and in the Southern Marátha Country. The estates of indebted Thákors in Broach and Kaira which have come under management disclose a considerable amount of rack-renting, and it is proposed to introduce the survey with a view to place rents on a more equitable footing.

When the original settlements for thirty years began to fall in, the revenue survey system entered into the second phase of its existence. In the first phase the dominant principle which had guided the counsels of Government was one of extreme moderation. The survey found the country half a desert, thinly populated, and the people miserably poor, and in thirty years the change has been little short of a revolution. The difference cannot, of course, be attributed solely to the survey. The steady rise in prices, occasioned partly by a considerable expenditure on public works and the increase of trade culminating in the almost fabulous rise of prices during the American war, was the cause of an unprecedented extension of cultivation and of an increase in all the indications of agricultural prosperity, but the thirty years' settlement under the survey system made it possible for the rayat to reap the full benefit from the harvest of prosperity which had ripened around him. The inevitable reaction set in. and it is unfortunate that the settlements should have expired just when there were unmistakable signs of the commencement of a period of depression. The re-settlements made at that time were somewhat influenced by the impression that the decline was temporary, but after a time the re-settlements were again considered and reduced.

Two great questions naturally came up for discussion: How far old first, to what extent the measurements of the first survey measurements should should hold good, and, second, how much of the "unearned

Revenue Surveys.

increment" should be appropriated by Government in enhancing the rates. It was declared to be "obviously most desirable to avoid the annoyance to the people and cost to the State of a re-survey and re-classification even at a slight loss to the revenue", except in the case of those parts which had been measured in the infancy of the survey and before the method of assessment had been systematised. But in practice it was found that little was saved by abstaining from re-measuring the The first survey had necessarily left large blocks on single fields for which there was no occupant, but the progress of cultivation made it necessary that the block should be divided among the different cultivators, each being made responsible for his particular plot. Nor did the first survey make a sufficient difference between the best and the worst soils, the latter being highly assessed in proportion: and as this difference is now recognised, it is necessary to apply the correction to the original classification. Therefore in re-settling a district it is found necessary to make so many reductions in the size of large fields and alterations in others, and also to examine the classification of so large a percentage of the survey numbers that the difference in cost between a thorough re-survey and this process of examination and correction would perhaps be very small. Still the original survey was made with a commendable degree of accuracy, and the extent of the work to be done over again will be inconsiderable in many parts, while the annoyance to the people is a material element in the determination of the question.

Share of unearned increment to be claimed by Government. The share of the uncarned increment to be appropriated by Government in a revision of settlement is a more difficult and complicated problem. In the absence of any precise knowledge of the cost of cultivation, the maintenance of the cultivator and his family and the surplus available for rent, it is only possible to proceed on the basis of past facts. The original survey was eminently successful, and apparently left a large majority of the gross produce to the credit of the producer.

Having regard, therefore, to the difference in prices under the old settlement and at the present period, and admitting that the cultivator has a right to share in the increased profits of his land, the enjoyment of which during many years of the original settlement has accustomed him to a higher standard of domestic comfort, it was ruled several years ago that the assessment should never be more than doubled in individual cases, but this was practically restricted by the limitation of the increase on any one village to 66 per cent., and on a group of villages settled under the same conditions to 33 per cent. This ruling, though only formally declared to be applicable to certain Decean Collectorates, may be regarded as guiding the operations and proposals of the survey in all the districts of the Presidency proper.

The Government of India have decided that, having regard to the cost of revision operations, to the harassment of the people during their currency, and to their effects in checking improvement and affecting the value of property, a revision of settlement should not be undertaken unless the annual increase expected would be about 20 per cent. of the cost, and should not be commenced at all if the increase would be less than 10 per cent.

In consideration of the depressed condition of agriculture resulting from the famine the increase of assessment on revision was reduced for three years to within 20 per cent. on the rates of the old settlements. The abundant harvests of the last two years have greatly contributed to improve the condition of the Deccan, and it is hoped that the people will now be found to have recovered sufficiently to admit, of the collection of the full revised rates from next year.

Nevása revised settlement.

A large part of the táluka of Nevása was re-measured before the receipt of these orders, and it has been re-settled during the year. The progress made since 1851-52, when the original settlement was made, has been marked, the area under cultivation has nearly doubled, and the revenue has risen from Rs. 84,000 to Rs. 1,09,000. It is now within a few miles of the railway and the old tracks have been transformed into high roads, well metalled and bridged. The average price of the staple food-grain, jowári, was 55 sers for the rupee in the first decade and only 24 sers in the last decade of the settlement, but in the latter period the price was affected by the famine. Lately the price has been 30 to 40 sers for the rupce, and under these circumstances the rates have been increased—on the best land from Rs. 1-4-0 to Rs. 1-6-0 per acre, and this will show that whereas at the beginning of the first settlement the farmer had to sell 70 sers of jowari to pay the assessment, he will now be required to part with only 55 sers. Had the present price of 70 sers been taken as the basis of a revised settlement, the amount would be at least Rs. 1-12-0, or an increase of 8 annas an acre; and it will be admitted that in making an advance of only 2 annas or 3 pence and giving 6 annas to the farmer, extreme moderation has been exercised, and that he has been allowed to retain three-fourths of the unearned increment. Moreover, however unsafe it may be to predict the range of future prices, yet it is reasonable to suppose that prices in the late bountiful season were lower than they are likely to be in an average of future years. In fact prices are now (December 1882) about 20 per cent. higher than at this time last year. In the thriving taluka of Málvan a settlement has been made for the first time which has increased the revenue by 22 per cent., and in Kánara, parts of Sirsi, Supa and Honavar have been surveyed and settled. The country is naturally protected

Málvan.

Kánara.

from famine, and the tropical plantations of the supari and cocoanut, the pan and the pepper vine bear silent evidence of the natural richness of the land. Hitherto the assessment has been levied at a guess upon the extent of cultivation, and the inequalities of this mode of assessment are now superseded by the accuracy of the survey, which has been welcomed by the people. In the Native State of Kolhapur the settlement of 60 villages has caused an increase of 5 per cent. on the old revenue.

The City Survey of Ahmedabad has at length been concluded after operations and enquiries extending over seventeen and a half years. It has already proved of great benefit in preventing the inveterate habit of encroaching upon public land; and although the financial result shows a deficit of Rs. 84,599, there is every reason to believe that by the sale or lease of the vacant land this temporary closs will be soon converted into a substantial surplus. The population is increasing, and the land, which is valuable, has already fetched prices varying from Re. 1 to Rs. 325 per square yard. In Dhárwár and Hubli the mapping

work is nearly complete.

Great extension of cultivation.

Except in the exceptional districts of Sind and the Panch Maháls the best lands may be said to be fully occupied. In Khándesh perhaps some good land is still available and also in Kánara, but in both of these districts the want of labour is a check upon cultivation, which, however, is being rapidly overcome in Khandesh. Deccan districts suffered so severely in the famine that it is only natural that the land which was thrown out of cultivation should be gradually re-occupied; but the rapid recovery of these unfortunate districts, helped as it has been by bountiful seasons, has been astonishing. In this year over 100,000 acres have been re-occupied, the winter harvest has been abundant and the grain pits have been filled, and the only complaint has been that prices have fallen to so low a level that they do not cover the expense of cultivation and the Government assessment. The practical enquiries which have been made for a series of years relating to the outturn of crops, as determined

by actually weighing the crops of particular fields, give very different results, the outturn in dry-crop lands being greatly influenced by seasonable rain. The yield of a field assessed at Re. 1 an acre in Sholapur has been found to be over 1,000 lbs. of grain in a good season, and the lowest average has never been declared to be less than 350 lbs.

Last year the cheapest rate at which grain was sold was never more than 100 lbs. a rupee, and if it were allowed that the yield of the exceptional harvest of 1981-82 was only 500 lbs. an acre, the gross return would not be less than Rs. 5 per acre, of which Re. 1 would be the Government assessment. The average holding being about 15 acres the total outturn would be 7,500 lbs., of which 1,500 lbs. would be sold to pay the assessment and 6,000 lbs. would be left for the consumption of the cultivator's family, who would consume 2.000 lbs. and leave 4,000 lbs. either for sale to provide luxuries and necessaries or to be hoarded. The complaint, therefore, that the fall in prices has injuriously affected the rayat, does not appear to be well grounded, and this view is sustained by the fact that there has been an unusually small amount of borrowing or selling, as evidenced by the registration returns and the remarkable decrease in native ornaments sent to the mint for coinage. The assessments for the license-tax also show that the money-lenders have pleaded a great reduction in their business and profits as a good reason for the abatements which have been liberally made. The great increase of cultivation is in itself conclusive that the people, who are the best judges, have not been deterred by the fall of prices from cultivating as much land as they could in a good year, while the beneficial regulations of the survey do not oblige them to retain the land in bad In fact, the system allows free play to the dictates of self-interest: when it is to the interest of cultivators they extend cultivation, and when they suffer by it they resign their excess lands and contract their operations.

The great increase of agricultural stock is another Increase of indication of agricultural prosperity, and it is even asto-tural Stock. nishing when it is considered that cattle-disease of a virulent type prevailed in many districts. From all districts there is the same satisfactory account of a large increase in live-stock, and in Belgaum the numbers are sufficient for the cultivation of the whole of the district. Hence both in the extension of cultivation and in the increase of stock the traces of the great famine are being rapidly obliterated.

but from all other districts the testimony is general and emphatic that there has been an improvement in the material condition of the people. The cultivation of cotton has increased enormously, perhaps stimulated by the comparatively small profits in grain, and the traffic returns of the G. I. P. Railway show that the great increase in their carriage of goods was in the local traffic of the Presidency,—unprecedented quantities of cotton and wheat having been carried to Bombay for export. Sholapur the people are thriving, and forgetting the famine; in Kaládgi they are continually improving, and there is less actual poverty there than in any other part of the Deccan. In Nagar unfortunately the northern tálukas have again had a very unfavourable year, and it was necessary to spend a large sum in improving wells for the water-supply and in allowances to the village officers to retain them in their villages. A large amount was also made available as loans to the people for improvements and for the purchase of cattle, but it is singular that little of it was taken up. In Gujarát tho people are generally well off, although the season was not so vary favourable for them. In parts of Kaira the population is more dense than in any other part of the Presidency, and the pressure upon the soil is extreme,

In so large an area it would not be possible not to condition have some reverses, and the condition of the people in of tho Dhandhuka and in a few coast villages in Broach is said people. not to be satisfactory. In Dhárwár also the failure of the rice crops has temporarily embarrassed the rayats,

Thriving

yet the population has apparently not overtaken the food supply, and they decline to take advantage of the inducements held out to emigrate to the Panch Mahals. This district, which has hitherto been almost an unknown country, will probably soon be opened up, as the facilities effered by the railway must soon dispel the terrors which it excites.

The only class in the Konkan which is said not to be doing well is that of the Bhandáris or toddy-drawers from cocoa and date palm trees, whose industry is restricted by the increased excise duty upon tapped trees, but this is more than compensated by the greater sobriety of the people and their material improvement, and it is possible that the Bhandáris will in time turn their attention to the manufacture of palm sugar and so recoup their losses. Ratnágiri is the great home for pensioners, the land is fully occupied, and the sea-coast. villages to a thriving trade; but the produce is not sufficient for the population, and a considerable quantity of grain is imported. The condition of the people in Sind is also prosperous: they live roughly but not miserably, and labour is in demand and commands good wages.

The wage-receiving class naturally has been greatly benefited by the fall in prices, and in the Southern Division by the demand for labour in connection with the Southern Marátha system of railways.

Land Revenue collected with ease, The land revenue has been collected without pressure, and it was only necessary to issue notices to about 5 per cent. of the occupants to pay their assessments. Most of these persons paid their dues, and in a few cases only was resort had to distraint. In half the districts the number of distraints was under 100 in each.

Indebted Estates of Tálukdárs. The difficulties in the management of the estates of indebted Tálukdárs have led to proposals for the amendment of the Act, by which it will be sought to promote the partition of joint shares and to settle the vexed questions regarding alienations. The survey will be in-

troduced into the estates of the Thákors of Broach and Kaira which are under management, as it is found that the rates are too high and press unduly upon the cultivators. A Rumber of Girásias who are involved in debt have applied for the benefit of the Act, which could not be applied to them, as they are not of that rank of persons to whom its application has been restricted, but it is questionable whether the Act should be further extended.

The Acts of the Government of India passed in the year Legislation. which more nearly affect the Bombay Presidency are the Factory Act, the Acts relating to the Sind and to the Broach and Kaira incumbered estates, and the Act amending the Dekkhan Agriculturists' Relief Act. To start the working of the first Act an experienced inspector was brought out from England, and it is satisfactory to learn from his report that machinery is properly fenced and that the mills are generally well conducted, although he has strongly represented the need of much more stringent provisions for the prevention of over-work for children and young persons and for the good sanitation of the building.

The Factory Act.

The Acts relating to the incumbered estates of Zamíndárs and Thákors in Sind and Kaira and Broach have been amended to secure the advances made by Government to clear off the debts of these gentlemen without the cumbrous process of a mortgage in each case, and further time has been given to them to apply for the benefit of this Act. The Act amending the Dekkhan Agriculturists' Relief Act will be referred to further on.

The Bombay Legislative Council has passed a very useful Act in providing for the appointment of village officers in Sind, by means of which the duties of Government in connection with the revenue and police will be more efficiently discharged than hitherto. The ancient system of village communities, if it ever existed in Sind. has completely died out, and hence the necessity to revive or create that part of it which is an assistance to good

Village Officers in Cotton

government. The Cotton Frauds Act has been abolished. Frands Act. It was originally introduced in 1863 at the urgent recommendation of the merchants themselves, but the subsequent fall in the price of cotton and the changes introduced by the adoption of a system of classification of cotton in the trade led to the suggestion that the Act should be held in abeyance, but retained in the Statute book to meet any exceptional complication which might arise similar to the state of things in 1863. The Secretary of State, however, at first directed that the Act should be amended, and Act VII. of 1878 was passed in accordance with his suggestions. This Act, too, has now been formally repealed, the establishments maintained under it having been abolished about two years ago, but since its repeal many complaints have been made of the adulteration of cotton in bales, and a certain reaction in favour of the revival of the Act appears to have set in.

Police.

Another indication of the prosperity of the country is to be found in the police returns and the statements relating to criminal justice. Crime has greatly declined. The offences affecting life decreased by 88; and, as the High Court has remarked, the offences of theft, extortion, robbery and dacoity, criminal misappropriation, criminal breach of trust and receiving stolen property, by which the criminality of the country can best be gauged, decreased by 1,617 cases. The success obtained by the police in convicting persons whom they were responsible for arresting, was generally about 60 per cent., although the measure of success in Sind was only 51 per cent. The extent to which trivial or false complaints are made, may be judged from the fact that one-fourth of the offences reported were struck off by the magistrates as no crime, and 19 per cent. were undetected or remained pending at the close of the year. The only class of crime which is practised as a profession is cattle-lifting in Sind; the gang of Bedar dacoits which had given some trouble in Belgaum and Kanara was captured, and another desperate gang in Hyderabad was pursued and dispersed after a fight with the police in which their leader was slain.

The police is in the majority a Mahomedan force, although a good number of Maráthás is employed in the Marátha districts, and it offers a great career for intelligent men with active habits. As a rule, most of the native inspectors and chief constables have risen from the ranks. Bhils and Kolis are also employed in the districts where they are found. The Railway Police have hitherto been paid by the companies, but Government have now undertaken to bear a share of the cost, as in other parts of India.

The criminal courts convicted 47 per cent. of the number of persons (108,323) brought up for trial and acquitted or discharged 51 per cent. The number-remaining under trial was 1.50 per cent., and the duration of a case was generally six days. The High Court reversed 10 per cent. of the convictions by the Sessions Court and Presidency magistrates which were appealed against. In the same way 17 per cent. of the decisions of Assistant Sessions Judges and superior magistrates were reversed by the Sessions Courts, and the Appellate Courts reversed 28 per cent. of the decisions by the subordinate magistrates.

Prisons.

Administration of

Justice.

Criminal

Courts.

The decrease in crime has naturally affected the number of prisoners confined in jails, which is lower even than the number confined in years before the famine, and the cheapness of food has materially reduced the cost of rations. In Kaladgi the food of each prisoner only cost the small sum of Rs. 11-6-6, thus showing that it was possible for the wage-receiving class to have lived upon one rupee a month. The average number of prisoners confined per day was 9,734 against 11,236 in 1880 and the gross cost was Rs. 62 per head, which may be reduced to Rs. 42 after deducting the cash receipts from the proceeds of jail labour. This is the lowest rate at which prisoners have ever been maintained in this Presidency. An average of 3,081 men was daily employed in manufactures, and earned Rs. 55,637 independently of the work done for the jails themselves. The amount earned by the extra-mural gangs was Rs. 1,28,488, which, however, was swallowed up by the cost of their maintenance and guards; the Nára Gang, however, earned a clear profit of Rs. 1,278, which is the first time such a result has ever been attained in any jail or gang in this Presidency.

Improvements have been made in the Juvenile Prison cat Poona by completely separating the juveniles from the adult prisoners and providing them with separate wards and separate workshops. They receive school teaching daily, and are also taught trades as smiths, carpenters, weavers, &c. At Shikarpur the boys when asked declared they would not follow the trades taught to them, because weaving and carpet-making require capital, and pottery and reed work are the occupations of the lower castes, and in consequence they are now taught carpentry and blacksmith's work, which will be useful even if they do not follow them as regular pursuits. has also been disclosed that not one boy who could be traced out of 63 released, follows the trade he was taught, 9 had been returned to jail, and others were servants and labourers. Apparently juvenile reformatories have not vet effected the good they were designed to do.

Civil Justice. Litigation appears to have decreased in the High Court and in the superior district courts, but in the subordinate courts it has increased, except in the southern districts. The only noticeable increase, however, is in the number of suits brought in the districts subject to the Dekkhan Agriculturists' Relief Act. The first effect of the Act was apparently to check litigation, but it is now seen that this was only a temporary effect, and that a large amount of litigation is intercepted in its initial stages, as the parties are obliged to obtain a certificate from a conciliator preparatory to filing a regular suit. In the southern districts the decrease in the number of suits is said, to be due to the improved condition of the people, who are in a position to meet their obligations without the compulsory process of a decree.

The duration of suits does not appear, as a rule, to be unnecessarily prolonged beyond those delays which seem

to be essential in the interests of justice. In the subordinate courts six months is the average duration of a contested suit, while in the superior district courts and in the High Court it is about nine months. 91 per cent. of the suits which were actually tried were decided in favour of the plaintiff, which does not tend to show that any unusual amount of false claims is brought before the courts. Fair progress had been made in the disposal o appeals, and the number in arrears has been considerably reduced, but more than a third of the remainder are pending before the High Court and the district court at Thána, to which latter court an officer has been specially deputed to assist in working off the arrears. · A very large number of second appeals appears to be made to the High Court without any reasonable chance of succoss and upon mere questions of fact. This implies either a defect in the education of pleaders or a reckless spirit of gambling on the part of defeated litigants.

About 70 per cent. of the litigation in the districts The Deksubject to the Dekkhan Agriculturists' Act falls under culturists' that Act. Debtors had begun to sue their creditors in a great many instances to recover possession of their mortgaged properties through the medium of an account suit. but on the High Court holding that this was not an appropriate form of action for the purpose, recourse was had to formal suits for redemption; and the Government of India, in consideration of the special circumstances of the people, remitted the heavy court fees which seemed to stand in the way of the recovery of their property by debtors. The debtor, however, is required to repay the amount found to be due, which he is not always able to do, or to have the mortification of seeing his interest in the land sold outright, and this result has tended to check the institution of such suits. It has been proposed to amend the Act to permit of account suits being brought for the recovery of mortgaged properties; but although the Act has been amended by enlarging the scope of the term "agriculturist" and m other minor particulars, this amendment has not been adopted.

The novel provision of the Act empowering the Judges to go behind the bond and to inquire into the history of a transaction, has been availed of in 796 cases with the usual result of reducing the claims, sometimes slightly, sometimes considerably, and upon an average about 26 Neither debtors nor creditors appear to be fully satisfied with the results, and this is no doubt an indication that substantial justice is done. It has not been found possible to make over the land of a debtor to be managed by the Collector on behalf of the creditors, as most of the land is mortgaged and in the possession of creditors, but generally cultivated by the debtor. Nor have the provisions relating to insolvency been availed of. The debtors are sufficiently primitive to retain a horror of insolvency; but prudential considerations also restrain them, for it would no doubt be difficult for any defaulter to borrow again, and the tenacity with which they cling to the land has also its influence. They seem to prefer to endure the misery of eking out a bare subsistence from the land than to sink to the position of casual labourers.

In a few talukas the conciliation system has been suspended from different causes, but it is in full force in 26 tálukas, and 313 native gentlemen have been employed upon the good work of persuading the parties to make a fair settlement of their obligations. They disposed of no less than 69,531 applications, but in more than half the number the debtors refused to appear, and they granted 34,007 certificates to creditors to enable them to proceed in a regular court. In more than 14,000 cases it is believed the conciliations were successful in effecting a satisfactory settlement, and to this extent the civil courts have been relieved of unnecessary work. They generally succeed in reducing the claim by one-quarter of the amount; and there is little doubt that, where good men can be obtained, the system has many advantages. It is still, however, in its infancy, and has not passed the experimental stage.

The operation of the Act has been severely criticised,

but it is evident that it does not stand in the way of creditors recovering their just debts without utterly crush-, ing the debtors; and if the extinction of the petty moneylender has been one of its consequences, it is a consequence which would not, at all events, be an unmixed The village money-lenders with their extortionato practices and usurious rates were a burden upon the. people, and if it is now not so easy for the needy with small security to obtain a loan it is a question whether many facilities for borrowing are beneficial among an ignorant and improvident people. It cannot be denied along with much evil the system did some good, for there are many seasons when the cultivator must borrow for seed for implements and for food, and some efforts may be necessary to restore the good which has been swept away and to make it possible for the people who require loans for their field operations to obtain them on easy terms. Government have been always ready to assist such people with loans for agricultural purposes, but the people have not been inclined to make much use of the facilities offered to them, although efforts have not been wanting to make the transaction as simple and direct as possible. For, whether it is due to timidity, to old habits, to being in the power of the savkar or to any other cause, it is certain that the people do not come forward readily to apply for a loan from Government. It has been suggested that an agricultural bank devoting itself entirely to this business and operating with a moderate support from Government might effect great good; and as the Government of India have approved of some assistance being given to such a bank, there is a probability of the scheme being started under fair conditions of success.

Fewer documents were registered in the year than in 1880-81, and it would appear that for some years the tendency has been towards decline. In so far as it imports that the improved condition of the people has made it less necessary to sell landed property, it is not an unhealthy sign; but, on the other hand, it may also imply less

Registra-

business activity. The trade returns and the agricultural and revenue statements, however, all show a great advance in commercial and industrial activity and prosperity, and the depression in registration cannot, therefore, be ascribed to causes which are injuriously affecting the public Registration under the Dekkhan Agriculturists' Relief Act has also decreased. This by itself would imply a decrease in the number of loans to agriculturists; but as the decrease under general registration is common to almost the whole Presidency and appears to be simultaneous with great general prosperity, the decrease under the special Act perhaps merely indicates a less necessitous state on the part of the cultivators. The special Act has been amended by the repeal of the clause requiring the registration of all documents relating to money or lands executed by agriculturists before the Act came into force. It had not been found practicable to register over 100,000 documents within the year prescribed by law in the personal presence of the parties, and the documents have now been returned. The delay, however, has had the good effect of stopping a good deal of litigation at a critical time, and the debtors are now in a better position to pay. An administrative change has also been made in the appointment of special registrars for village registration in place of the village accountants, against whose honesty and partiality there had been a great outcry.

Military.

In proportion to the reductions of the cadres of regiments in the other Indian armies one regiment of cavalry and three of infantry have disappeared from the Bombay Army List, but the strength of the remainder has been proportionably increased. A scheme for a more efficient transport service for all India is also matured, which will involve the concentration of transport at Poona, Kirkee, Mhow and in some point in Sind. In cantonments revised systems of taxation have been introduced with the view of rendering them self-supporting.

Marine.

There is a growing demand for native seamen, who are not infrequently sent to England as passengers to join ships newly launched.

It is satisfactory to notice the very flourishing condition of the finances of the Bombay Municipality which has repaid $7\frac{1}{2}$ lákhs of debt and interest and has set aside $2\frac{1}{2}$ lákhs as the nucleus of a fund to provide suitable office buildings, besides spending $1\frac{1}{3}$ lákh on new works and increasing the expenditure on conservancy and vaccination. The new works were chiefly in connection with the drainage scheme, the Tulsi water-supply, and roads to afford facilities for the traffic at the dock.

Municipality of Bombay.

District Municipalities.

The district municipalities continue to be carefully and economically managed, and special efforts have been made to improve the octroi duties and to provide for a prompt and liberal system of refunds. In Sind alone the refunds amounted to 5 lákhs, and warehouses have been built at Karáchi and Lárkhána to facilitate the work. In a few towns a house-tax has been introduced, and efforts are being made to substitute this tax for the octroi wherever possible. A direct tax, like the house tax, naturally produces some irritation at first, and it is to be regretted that in some towns the assessments should appear to have been made without due care and moderation, and should have caused unnecessary annoyance and opposition. Great attention has been paid to conservancy; the improvement in this respect has been marked, and it is observed that the receipts from the sale of nightsoil poudrette and sweepings have increased in several of the large towns.

The expenditure in municipalities was over 32 lakhs, and a very satisfactory sum has been spent on public works. The special improvements to roads in Ahmedabad have been pushed on with vigour. In Thana the works for the water-supply of the town have been finished, and His Excellency the Governor marked his approval of the enterprise and spirit of the town by opening the works in person. Large sums have been spent on roads in the Central and in the Southern Divisions. The municipal commissioners of Satara in the year under review borrowed a lakh for the improvement of their water-supply, and Chiplun applied for a loan of Rs. 30,000 for the

same purpose, by means of which an excellent supply has been obtained for that busy port, and His Excellency has lately also inaugurated the completion of this work. 3½ lákhs have been spent in Karáchi with the like important object.

Cotton,

The enermous extension of the cultivation of cotton by more than a million of acres in two years has not only been induced by the deficient crops in America, but has also been affected by the fall in the prices of grain, and large areas formerly under grain have been put under The season has been exceptionally favourable for this crop, and the outturn is reported to be higher than the previous year, which is sustained by the results obtained at the experimental farm in Khándesh, where the average yield was 117 lbs. per acre, although the average of the Presidency is about half that quantity. It is evident that illimitable quantities of good varieties of cotton can be supplied, and that with a better husbandry and the use of selected seed the outturn of individual fields may be vastly improved. The area cultivated with wheat continues to expand, and in five years it has risen from a million to more than a million and a half of acres. department for improving the breed of horses has been re-organised and placed upon a sounder footing. results attained under the old system have not been unsatisfactory, as is proved by the excellent stock which can now be exhibited at the different horse-shows, but it is expedient to utilise the horse-breeding powers of the country to a greater extent to meet the demands for the army and other services. The new department will be able to pay more undivided attention to the work, and the results will perhaps be proportionately greater, and as it is proposed to organise a mule transport service the breeding of mules will be still further encouraged.

Horsebreeding.

Trade. The expansion of the export trade is most satisfactory. It has occurred chiefly in cotton and wheat and in seeds and skins. 4,433,000 cwts. of cotton were exported, and the trade appears to have recovered all the ground that it

has lost of late years, and as the prices are moderate it is possible that it has been placed on a more satisfactory basis. The exports of wheat have been unprecedented, and the value is stated to have been 513 láklis, or nearly four times the value in 1880-81. The local traffic in wheat on the G. I. P. Railway was extraordinary, and, great quantities of cotton and wneat were brought down by the Rajputána line and by the Indus Valley Railway. In fact, the rice trade was partially abandoned to secure the greater profits to be obtained from wheat, a trade which only commenced about six years ago. crease in linseed and in ground-nuts was great. latter article is rapidly becoming an important item of export, and in the former the increase is all the more satisfactory, as America now grows her own linseed. The large decrease in the export of opium is, however, a source of anxiety and, if long continued, must materially affect the Indian revenues.

The import trade has declined, although it is still above the average of the preceding five years, and it is thought that the large stocks imported in 1880-81 have stood in the way of imports in 1881-82. Increasing quantities of cheap earthenware and hardware and umbrellas continue to be poured into the country, and the demand for these articles appears to be steadily rising. Larger quantities of liquors have also been imported, notably of cheap brandy, whisky and Vienna beer.

The abolition of the cotton duties on the lower counts had the effect of stimulating the manufacture of goods which just escaped the duty and as they appear to be made of stronger material and with less size they have become popular and command a ready sale. The imports of duty-free cotton-goods increased considerably, but dutiable goods decreased, and the net result was only a small increase. The Rajputana Railway has apparently opened a wider market, and business has been done with tewns which there was no possibility of reaching before. The imports of coal, copper and iron declined very seriously, but there

716-58

was an increase under machinery. The imports of gold and silver have also increased and as the latter is not used as currency, it is evident that the large quantities which are being imported, denote a greater indulgence in luxury, but no doubt a considerable quantity is used as a means of exchange. The decrease in the import trade has naturally affected the customs receipts; and as towards the close of the year the memorable abolition of all import duties, except upon five articles, caused a further loss, the total decrease amounted to 10 lakes. The contraction of the rice trade, which was abandoned for wheat, has also contributed to the decline.

Prince's Dock.

But the great development of the export trade is nowhere seen clearer than in the extraordinary profits which have been obtained by the Prince's Dock. Not long ago it was believed that the dock would not be resorted to and would be a burden upon the Port Trust, but now there is not room for the steamers that would use it, and already the expediency of constructing a new dock is being dis-The Prince's Dock alone earned a net sum of 6 lákhs, which is nearly 7 per cent. on the cost of construction. The total surplus of the Port Trust was nearly 9 lákhs, which has enabled the Trustees to make several judicious reductions in the shipping charges and wharfage rates. The credit of the Trust was, in fact, so good that the Trustees were able to raise a loan of 7 lákhs bearing only 4 per cent. interest at a premium of a quarter rupee, and this success induced them to apply for powers to raise a large amount to pay off the debt due to Government. These powers were given by law, but unfortunately the current rate of interest had risen in the interval, and the opportunity was lost.

Public Works. The return of peace has left the Government free to devote their energies to the prosecution of public works and irrigation, upon which over 96 lakes was spent during the year. The expenditure on military public works was 12½ lakes, but the only important work commenced was the fortified position at Ahmedabad.

15 lakhs was spent on civil buildings and their repairs. The salt-works and offices, courts for subordinate judges and mámlatdárs, several dispensaries and schools, alterations to the ancient buildings at Bijapur to adapt them for public offices, and the churches on Malabar Hill and at Ahmedabad, to which last the State made contributions only, were the principal works which were executed. On roads and bridges 32 lákhs were expended, of which about a third was applied to original works. The road from Kalyán to the Málsej Ghát is important and will be a great convenience to the cart traffic; from Surat to Bárdoli the road is practically complete, and in Broach causeways across two salt creeks which intercepted the traffic have been completed. Dhandhuka is being put into connection with the Bhávnagar Railway, and several useful roads were made in the Panch Mahals. In Kanara a section of the Kárwár-to-Yellápur road has been improved. which will develop the forest traffic, and further progress has been made in the general road system of the Southern Marátha Country. Two more ghát roads in the Southern Division, the Amba and the Nhávi, were also pushed on, and are practically complete. The important Loni-Bári road will give the northern tálukas of Nagar an outlet to the railway near Igatpuri, while the number of feeder roads which are being built to connect these districts with the Dhond and Manmad Railway must prove extremely useful, and Government have undertaken to give a grant-in-aid of half a lakh a year until they are completed.

The Ashti Tank in Sholapur and the Bhadalwadi Irrigation. Tank in Poona have been opened for irrigation, and the total area, which may now be said to be permanently protected from famine, is nearly 300,000 acres, which is capable of maintaining at least as many people. a matter of regret that only a tenth part of the irrigable area is actually irrigated, although there can be little doubt of the altimate utilisation of the canals. A peasantry possessing small means are perhaps not in a position to be enterprising, nor do they appear to possess

the skill necessary for the growth of irrigated crops by an economic use of water; but although the returns show considerable fluctuations, there is, on the whole, a decided tendency to a more extended use of irrigation. This is especially noticeable in the neighbourhood of Poona and on the Kristna Canal in Satara. The season under review was favourable, and the farmers were more independent of the canals, and the slow extension of the area irrigated must be expected until by recurring experience they have learnt to make the most out of an irrigated field.

Considering the astonishing difference between an irrigated and a dry-crop field, and noticing how rich the for-mer is with its crops of "waving wheat and verdant sugarcane", it is not surprising that enthusiasts should have advocated the immediate undertaking of a vast network of canals which they fondly believed would turn the country into a smiling land. But a sober experience has toned down the vivid colours of this glowing picture, and the insufficient returns which in many places have been realised, have proved the necessity of proceeding with caution. Sind is a notable exception, but it is recognised that generally canals will probably not return an interest on their cost for many years after their construction: yet it was necessary to choose between the loss on artificial irrigation and the certain waste on periodical famines, and it has been determined to carry out canals by loans but within a certain limit of expenditure in order to guard against financial embarrassment. The Níra Canal and the Mhasvad Tank, which were projected many years ago and put aside pending a decision on the general question. will now be constructed as protective public works, and the expenditure upon them must be regarded as an insurance against famine.

The Nira works will cost about 34 lakhs, and its canals, 105 miles long, will command 289,000 acres of land in a part of the Poona District which has an uncertain rainfall and which has been most severely tried by famine. The Mhasvad Tank will extend its canals for 30 miles in

Sholápur. The Gokák Canal is calculated to protect an area of 600 square miles when completely carried out, but the section now being constructed will command only 25,000 acress In Ahmednagar the small canals from the Pravara will be benefited by the Maladovi storagor tanks which will soon be taken in hand, and which will also enable the Right Bank Ojhar Canal to be undertaken for the protection of a part of the country which of late years has suffered very heavily. The project on the Bhíma will, if carried out, protect the southern parts of Ahmednagar, and there is a small work in course of construction on the Muchkhandi, in Kaladgi. These works, in addition to the works already in operation, will go far towards putting the Deccan in a state of preparedness against the next famine; but now that the Southern Marátha Railways are being pushed on, the effects of famine will probably only be felt in a partial rise in prices. Practically the failure of crops in the north of Ahmednagar might have produced a local famine, but the facilities given by the railway were such that prices were cheaper than they had been for many years.

While so much attention has been devoted to the large canals the minor village tanks and bhandaras have not been neglected. A systematic inquiry has been made regarding their capabilities, and few are found to irrigate more than 50 acres. In Gujarát some of them have been improved; but as the people have hitherto maintained them in a satisfactory way, the system has not been interfered with. The total expenditure on canals and tanks amounted to 30 lakhs.

The activity of the trade of the year is reflected in Railways. the traffic returns of the guaranteed railways. The G. I. P. Railway earned a net profit of 184 lákhs and the B. B. & C. I. Railway 57 lakhs, and in both cases the amount was sufficient to meet the guaranteed interest in full, as well as to divide a substantial surplus with Government. The latter company is indebted for its good results to the traffic which has been brought to it by the Rajputana Railway, but the success of the G. I.

P. line is in a great measure due to the expansion of the local traffic and perhaps to the higher rates which the company charged, and which, it was maintained by the trade, was a discouragement to traffic. The State railways also exceed a small net profit; and the share of Government in the Dhond and Manmad line is greater, as the expense of working it by the G. I. P. Railway has been less.

The bridges on the Bhávnagar Railway were nearly completed, and although unfinished, the profits of this line were expected to be nearly 4 per cent. The profit on the Gáckwár's Railway was reduced to 33 per cent., owing to the cost of re-construction of a part of the line.

The handsome passenger platform at Bori Bandar, the terminus of the G. I. P. Line, has been opened, and the great work on the B. B. & C. I. Railway was the opening of the imposing structure of the Narbada Bridge, which is 31 times the length of the bridge at Charing Cross with twice the depth of foundations, the columns having been sunk 100 feet. The extension of this line to Godhra was opened in February 1882, and it has been proposed to carry it on to Rutlam and even to Cawnpore, but this has been negatived by the Government of India. rival project has been submitted by the G. I. P. Railway Company to extend their line to Cawnpore and to Gwalior. Extensions from Bársi Road Station to the towns of Bársi and Pandharpur are projected for the accommodation of the large pilgrim traffic. A line is also proposed from Broach to Jambusar and from Surat to Bárdoli, which may be extended to Nandurbúr The extensions proposed by the Chiefs in Káthiáwár from Wadhwán to Rájkot and to join the port of Verával vid Junágad with the Gondal Railway have already been referred to.

But the greatest improvement which has been made is the final adoption of the lines from Bolláry to Goa and from Sholápur to Gadag. The rival merits of Kárwár and Goa had long been discussed. The former is a natural port in British territory and would open out Kánara and other British districts; on the other hand the estuary of Goa presents great advantages, and the Portuguese

Government have made great sacrifices to obviate the objections on account of its being a foreign port. The railway has been placed under British direction and the customs under British administration, and they have allowed the compensation payable to them to be hypothecated to the company to secure the guaranteed interest. An English company has promptly taken up the work, and the construction has been commenced with vigour. In British territory the construction of the line has been entrusted to another, though kindred, company, as well as that of the line from Sholápur to Gadag. The earth-works which were thrown up as famine relief-works have been utilised, and it will not be long before both the lines are opened.

A third line, which will complete the Southern Marátha railwaysystem, will probably run from Poona southwards, passing not far east of Kolhápur and Belgaum. It has been surveyed, and has been recommended for adoption to the Secretary of State. It will intersect the whole of the Southern Marátha Country, and will afford an outlet for trade to the coast at either end. The system as a whole will doubtless afford a powerful stimulus to the development of the country and a better military hold upon it, and will also secure important districts from the periodical visitation of distressing famines. It would, therefore, appear that, as far as human care and foresight can be exercised in the laying out of canals and in the construction of railways, the country is being put into a state of defence which will enable it to meet and repel a calamity which, as in the last case, swept away a million of human souls.

To supplement the railways and to provide through road communication from the sea to the great centres of trade in the Southern Marátha Country, a comprehensive system of arterial roads has been proposed by the Commissioner, S. D., in consultation with the district committees and with the Native Chiefs. It provides for 500 miles of road which, on a rough estimate, will cost 23 lákhs of rupees, and which it was proposed to raise by loan.

Southern Marátha Roads. Many portions of the scheme are in existence or in progress, but under the present scheme of local self-government works so extensive can hardly be effected by local funds.

Telographs.

The year has been marked by the adoption of a low tariff for telegraph messages and by a special charge of four annas for short distances; but the convenience of this last change has been counteracted by the establishment of the telephone, which immediately became popular, and is doing a large and increasing business.

Forests.

The forests have continued to receive the attention which they deserve, but the business of the year has chiefly been to define the boundaries and to classify the forest either as reserved or protected. Several officers of the Civil Service have been engaged upon this work, as it is found that the spread of cultivation is checked in many parts owing to the uncertainty of the boundary which may be fixed upon. The system of allowing grazing in certain forests on payment of a small fee has been extended in the Southern Division, where facilities have also been given for the sale of small quantities of firewood at a low price. Broadcast sowings, which were introduced in the Northern Division many years ago, have given very satisfactory results, and the system has been extended to the Southern Division. In the Deccan it is said a great change is coming over the face of the country as hill-slopes and other lands are becoming re-wooded, and as a consequence the grass has improved, and brings in a larger rovenue. Near Poona several blocks of forest are now sufficiently advanced to admit of their being opened out to grazing after having been closed for years.

The experiments at Ganesh Khind demonstrate the value of the casuarina as a profitable timber tree, and it is shown that good paper can be made from one of the common bulrushes which has grown up since irrigation has been introduced. But it is not probable that the cryptostegia grandiflora will produce sufficient rubber to allow it to be cultivated with profit. Henbane and taraxicum have been grown, and the cork and the olive

have flowered, and it might be possible to acclimatise the seedlings grown from the fruit. It is to be regretted, however, that the failure of the cinchona plantations must be accepted as demonstrated.

The finance of the year shows a very satisfactory surplus of 84½ lákhs on the whole account taken togother. The Imperial receipts increased under the items of land revenue and forest; the former increased by 8½ lákhs owing to the extension of cultivation and the latter to the activity in the timber trade. But the receipts from customs declined by 103 lakhs from causes which have been already explained, the loss on opium has been referred to, and the decrease of 3 lákhs under mint is due to less bullion having been coined. The total Imperial receipts were less than the receipts in 1880-81 by 371 lákhs, but the expenditure was greater by 69½ lákhs, and is attributable to the large purchases of salt from Goa, increased political allowances and an increase of 2½ lákhs paid as interest on deposits in the Government Savings' The receipts of this bank were 56 lakhs, and the withdrawals 57 lakhs. The surplus received from the guaranteed railways amounted to the satisfactory sum of over 27 lákhs.

Finance. * Imperial.

The Provincial Services show a satisfactory surplus of Provincial. nearly 9 lakhs in the ordinary account, but this has been increased by the Provincial refund, by the Government of India, of 8 lákhs deducted from the Provincial grant to Bombay in former years, and 25 lakhs to cover the loss which will be caused by reducing the revised settlements. The excise revenue yielded a large increase of no less than 11% lákhs, and the receipts from scholars and from tolls also increased. The cheapness of food reduced the cost of jails by 21 lákhs and the abolition of the preventive line allowed of a saving of Rs. 70,000. The condition of the finances, therefore, justified a larger expenditure of 31 lakhs more than was intended on public works, and enabled a large contribution to be made to education and a grant to be made to the Railway Police.

Excise.

The excise system has been extended by leasing the rights of Native States, extending the sadar distillery system and introducing a tree-tax on toddy trees. The system has been extremely successful financially and morally, and the check upon drunkenness has been generally noticed. The rules regulating the sale and transport of drugs has given a command over the trade which has brought it more under control and has increased the revenue. The foreign trade in opium has greatly declined as already noticed, but the quantity consumed in the Presidency has increased, noticeably in the Central Division.

Salt.

The duty on salt has been reduced to Rs. 2 per maund and equalised all over India. The exhaustion of stocks tended to restrict the direct supply by railway to other provinces, but it is believed that this stimulated the traffic with pack bullocks, which could not be controlled. The local consumption per head has increased, which is attributed to the recovery of the districts from the effects of the famine, but it is noticed that the people in the interior consume 4 lbs. more salt per head than the people in Gujarát. The large salt-works at Uru have been laid out, and it will now be practicable for the department to manufacture nearly double the quantity of the superior Baragara salt which is consumed in Gujarát, and is chiefly exported to the North-West and Central India.

License-tax.

The only thing remarkable about the license-tax is that only $12\frac{1}{2}$ lákhs should be collected from 16 millions of people. The Act presents no difficulties, but owing to the reduction of profits in the money-lending business, considerable reduction has been made in the assessments. Active trade has produced a better revenue from stamps on bills of exchange than has ever been received before, but the greater prosperity of the people has apparently caused less business to be done for which general stamps should be used. The receipts for court fees were, however, higher.

Stamps,

Vital.

The births registered were 459,657, or 27.93 per mille, and the deaths 381,450, or 23.18 per mille,—the deathrate being highest in Gujarát and considerably higher in * towns than if the country. In 1880 both the number of births and of deaths was lower than in 1881, but against the average of nine years the ratio in 1881 appears to be about 1 per cent lower. Cholera prevailed to a great extent, and carried off 16,694 persons, or at the rate of 47.36 per cent. of those who were attacked. Only 539 persons died from small-pox against an average annual number of 9,973. The deaths from bowel complaints and fevers increased, but there was a small decrease in the deaths from injuries,—the deaths from snakebites being 1,209. There has been a large increase in the number of vaccinations, and nearly 95 per cent. of the operations were successful.

The hospitals and dispensaries have given relief to a million and a quarter of individuals, and they are steadily increasing in popularity, -fevers, skin-diseases, worms and respiratory affections being the principal complaints. The new hospital at Dhárwár will soon be occupied, and at Kolhápur a large hospital is in course of construction, to which it is proposed to attach a medical school. school has been opened at Hyderabad in Sind, and the schools at Poona and Ahmedabad continue to make satisfactory progress, while no better medical education in India can be obtained than that imparted at the institution which owes its foundation to the munificence of Sir Jamsetji Jijibhai. At the Gokaldas Tejpal Hospital the assistance and co-operation of unpaid surgeons have been invited, and the innovation is being watched with interest; and lately the investigations regarding the number of lepers in the Presidency has led to an invitation to the public to assist the State to establish leper asylums, especially in the city of Bombay itself, which harbours a leper colony of most wretched subjects.

The progress of education has been satisfactory, and, Education. considering the money at the disposal of the department, it may be said to have made the most of its advan-

tages. In five years the number of schools has risen from 4,417 to 5,704, and the average number of scholars at each school has increased from 56 to 63, although the funds derived from Government and from local funds have not increased, but the expenditure of private funds in education and the expenditure of the Native States on the same object have continuously increased. During the year the expenditure by Government was over 24 lákhs, and another 10 lákhs was defrayed from private sources and Native States, and the increased outlay has resulted in a large increase of 361 schools and 42,000 scholars.

The Baroda High School has been raised to the rank of a college, which has to some degree affected the attendance at the Ahmedabad College. Four new high schools were established, 13 new middle class schools, 307 vernacular boys' schools and 28 girls' schools. tendance at the Law College and the Engineering College has declined, but increasing numbers resort to the study of medicine. The agricultural class is not flourishing, as the students have no career open to them after finishing their education, and the same cause is affecting the attendance in the forest class. The several technical schools appear to make some progress; but the Dhulia workshop has been closed as a failure, and the agricultural class at Broach has been closed for the same reason. other towns these classes have drawn a large number of pupils, many of whom have passed very successful examinations.

Examinations. Tested by the results of the University examinations the schools and colleges have not succeeded so well as in the previous year, the success at Matriculation being only 28 per cent. against 34. The results of the Previous Examination were generally poor, but there was a slight improvement in the examinations for degrees.

Several important changes have been made by the University. The rule restricting the Matriculation Examination to boys who have passed a certain age has been

abolished, as it operated harshly upon clever boys and condemned them to waste their time unnecessarily; and a year too soon at college is better than a year 'too late The practice in this respect is now uniform throughout India, and it is observed that three-fourths of the pupils who would have been under age have success-, fully passed the examination. The First Examination in Arts is now called the Previous Examination, to correspond with the English term. After the Previous Examination the student was formerly obliged to pass two years before going up for the examination for the degree of B.A., but he may now exercise a choice, and divide the examination into two parts, and after the first year submit to be examined in all the obligatory subjects, the First B. A., which will leave him free to devote the second year to the optional subjects, the Second B. A., which he might select. If he should fail in the first year, he is allowed to present himself in both subjects in the second year. Or he might elect to omit the First B. A. Examination and go fully prepared for the Second B. A.

The Vice-Chancellor in his speech referred to the Vice-Chanestablishment of colleges in the districts as a powerful means of diffusing a higher education, and to the revised bye-laws framed by the Senate as designed to make that body a pattern of what a deliberative body should be-courteous, candid, fair in argument, tolerant and business-like. He deplored the tendency to appear for the Matriculation Examination without being sufficiently grounded as the cause of so many failures at the examination itself and at the further examinations for obtaining degrees. Youths of inferior abilities who are not likely to be successful students are not weeded out with a sufficiently rigorous kindness. "The aptitude for scholarship is not universal, and disappointment must often result from setting naturally dull boys to tasks which call for at least an average measure of intellectual acuteness." Mr. West claims special advantages for the system of teaching which the University enforces, as it serves to remove

cellor's Speech the student from embarrassing associations, and subjects him to academical influences, and concludes an eloquent passage with the observation—"The student does not merely cram; the examination is but an incident in his course. He abides with his learning, takes in its influence in every mood, and at an impressionable age is imbued with the best thoughts of the greatest men under the guidance of teachers who have steeped their own minds in the same sacred springs. This goes to make a manly character as well as a strong and versatile intellect."

Mahomedan Education. The neglect of Mahomedan education has long been deplored, but the efforts of the Anjuman-i-Islam to encourage education among the Mussalmans were recognised, and a grant of Rs. 500 a month was made by Government for their special assistance. The school was established in November 1880, and in December 1881 it had 14 teachers and 429 scholars, half of whom had never been put to any school before. The school has been inspected with satisfactory results, and the Municipality of Bombay have generously contributed Rs. 5,000 a year. In the districts, and specially in Ahmednagar, they do not appear backward in using the Government schools; and, to encourage them still further, two Mahomedan gentlemen were appointed as deputy inspectors of schools.

Education of girls.

Over 22,000 girls are being educated at schools, but it is as yet too soon to hope for a proper appreciation of female education. It is well that a habit is being established and that interest is being taken in the subject, and in time an intelligent appreciation of education will probably follow. Already an intelligent and educated native lady has taken up the self-imposed task of travelling from town to town and addressing large audiences on the education of her sisters. Her words cannot fail to have some effect, and as a sign of the times her proceedings are remarkable.

European Children, A special enquiry has been made regarding the education of European and Eurasian children in the Presidency, and it has been found that 366 live at places

where no suitable school has been established, and 79 are kept from school by the neglect or poverty of their parents. The Bombay City Mission has kindly undertaken to provide for the wants of the 32 neglected children who are to be found in Bombay, and for the wants of the remainder arrangements have been made to have. them educated at local schools at the expense of Government if necessary. The Railway Department has been requested to arrange for the education of the children of their employés; and where suitable native schools exist, the parents would not be excusable if they neglected to send their children to them, nor is it desirable to draw distinctions between native and European children domiciled in India. Where suitable schools do not exist, it will be necessary to assist parents in sending their children to existing boarding schools at other stations.

The native mind is still profoundly affected by the Veds and the Puráns, and draws its religion and philosophy, its poetry and even its dramatic conceptions from these fertile and imaginative sources; and the only English periodical which appears to enjoy an extensive circulation among natives is the "Theosophist", which deals in mesmerism and spiritualism. No books on such practical subjects as travels and voyages or politics have been published, although the Sárvajanik Sabhá continues to interest itself in questions of administrative reform. There are a few publications in history and biography relating to ancient times: and in fiction while the Maráthi work which has been successful treats of the rascalities of a corrupt shirastedár to a collector, the Gujaráthi works which have attracted most attention have been satirical stories upon the manners and extravagances of reformed Parsis. 'Romeo and Juliet' has been translated into Kánarese; Rasellas into Sindhi. It is also noticeable that the Gujaráthis have been for some time past increasing the number of their publications and have now clearly passed the Maráthás, and also support three times the number of periodicals.

Books published Native Press.

92 newspapers are issued by the Native Press, but the Maráthi papers generally appear to be very short-They are conducted with an average amount of intelligence and ability-some with much of both, and for the most part discuss measures dispassionately and reasonably, although they naturally take a patriotic view of the obligations of Government towards India. Native editors have often a tendency to indulge in strong language, and perhaps many mistake criticisms, however captious, for independence of thought. The violent language of the young editors of the "Marátha" and "Kesari" with reference to Kolhápur affairs and the proceedings in consequence have already been referred to, but their strictures did not apply to Government. With the exception of this unpleasant incident the conduct of the Native Press has fully justified the confidence which the Government has reposed in them by repealing the Vernacular They, rely upon the prudence and good Press Act. faith of Government by persistently suggesting the subjection of charitable and religious endowments to the superintendence of Government to prevent mismanagement and misapplication of funds, and chiefly advocate the adoption of a permanent settlement of the land revenue; while they disapprove of the appointment of Native Civil Servants by nomination, and demand that the Service should be thrown open to competition in India as in England on such conditions as will admit Native Indian candidates on suitable terms.

PART II.

CHAPTER. I.—POLITICAL

Tributary States.

It is convenient to preface the annual account of the administration of the tributary States with a short table showing at a glance their area, population and revenue:—

District,				Area.	Population, 1881.	Revenue, 1881.

^{*} These figures are from the census of 1872.

GUJARA'T STATES.

CUTCH-

Area, 6,500 square miles; Population (1881), 512,084; Revenue, Rs. 16,03,055.

Political.

His Excellency the Governor Sir James Fergusson visited Cutch in January 1882; he landed at Mándvi on the 6th January where an address of welcome was presented to him and proceeded to Bhúj on the 6th January where he was received in State by His Highness the Ráo and held a levée and sat in Darbár. On the 8th he laid the foundation stone of the Alfred High School. The town was illuminated for three nights and the general festivities attracted a great number of visitors.

His Highness the Ráo attended the meetings of the Council of Regency as a spectator once a week and appeared to take an interest in the work. He is nearly 16 years of age and is being privately educated at Bhúj; meanwhile the administration is conducted by Ráo Bahádur Nandshankar Tuljashankar, the Diván, who is head of a Council of four members. As in previous years, disputes with the Thákor of Morvi absorbed and wasted a great deal of time, and the interference of the British Government is earnestly prayed by the Diván to put an end to these ever-recurring disputes, many of which have already been decided against the Thákor, but from these decisions he almost invariably appeals. The Thákor has evaded his liability to construct and maintain a good wharf and warehouse at the port of Wawania or to grant a site for a building for the accommodation of the officers of the Cutch State located in the town. The boundary disputes between certain villages of Cutch and Morvi in the Adhor Táluka have been settled by a Commissioner, but it is represented that an exchange of villages between the two States would be a far more satisfactory solution of present difficulties and a preventative of future disputes.

Bhayad.

The visit of His Excellency the Governor was taken advantage of by several of the Bhayad to make their representations regarding their rights and privileges and to pray for the British guarantee of their jaghirs, but their relations with the Agency continue to be friendly. Education is sadly neglected, although His Highness the Ráo and his brother have set the young Chiefs so good an example. Still a steady progress is observable, however slow, and in five years the number of boys under tuition has risen from 50 to 93, while 8 Jadeja girls attend school. The habits of centuries cannot be cast aside in a day, and this small progress is therefore not unsatisfactory, although the education is very elementary.

Surveys.

There are eight tálukas in Cutch which contain 1,086 towns and villages. The revenue system is the Bhaghatai or Metayer and the State share is sold by auction. A high value is set upon the right of occupancy, but in the Girásia villages the cultivators are tenants-at-will who can be evicted at any time. In State lands the right of occupancy is only accorded to those who have proved themselves worthy of the concession by sinking wells or convert-

CUTCH.

ing dry-crop into garden land. An experiment has been made in introducing cash rates in a few villages for five years, but the people do not appear cager for any change. The Revenue Survey has been at work for several years, but the work is confined to measurement and not to classification or assessment. 35,000 acres were surveyed during the year. The Party of the Trigonometrical Survey of India was engaged upon the Runn of Cutch, and the Darbar very generously provided the means of transport and carriage of food and water, which is difficult to procure in that desolate and inhospitable region.

About 10,100 acros of waste land were brought under cultiva- WasteLands. tion with great success, and an attempt was made to establish a new village and hamlet and to re-populate the deserted village of Ghodalak by making a channel three miles long for irrigating the Panier tract.

Girásia Estates under management.

The jaghirs of Roha and Vinjar were released from attachment in 1880-81, but their condition has not improved. They are in fact burdened with debt, and the necessities of maintaining the dignity of the family in marriages and other matters make it almost impossible for the Girásias to curtail expenditure and pay off debt. The estates under attachment in 1881-82 were 6. Lákadia had been eight years under management when released in this year and during this time Rs. 75,000 of debt was cleared off. The administration was improved, public works were carried out and a balance in cash was handed over to Sumraji. His son Harisingji is at the Rájkumár College. Gedi, the seat of the Waghela class, is under management during the minority of the Rána, and Lákhania and Kanthkot are under control for the same reason. The revenues of all three are very small. The Chief of Polanswa died without male heirs, and until the successor is nominated. the Darbar hold possession. The revenue management of Nahija is in the hands of Girasia proprietors, but civil and criminal powers are retained by the Darbar owing to the misconduct of these gentlemen. It is a thriving town and the centre of many families of Bombay Bhátiás.

Estates.

Besides these the Darbar administered the religious endow- Dharmadaya ments at Ajefal and of Sha Murad at Mundra and handed over to the rightful heirs 5 other charitable grants. The Pir of Ajefal died, leaving the jághír heavily sunk in debt, and the management is held by the Darbar until the dispute among the disciples regarding the succession is settled. The Khalifa of Sha Murad is a minor and the estate is in debt. These attachments of the estates of Rajput Chiefs are very delicate operations and extremely repellant to the pride of the people, but they tend to strengthon the hold of the Ráo over his vassals and are necessary in the interests of good government. .

Police.

The police force numbers 602 or 1 man to 10.7 square miles and to 850 of the population. There were 1,025 cases in which 2.111 persons were arrested and the whole of them were sent up for trial. 1,265 were convicted or 60 per cent. There were 612 cases of thefts and offences against property, of which in 504 cases conChap. I.

4

CUTCH.

victions were obtained. The value of stolen property was Rs. 31,016 and Rs. 20,095 were recovered. These results are a great improvement upon the previous year.

Prisons.

2,563 criminal cases were decided and 2,225 persons were convicted; only 4 per cent. of these were imprisoned for more than six months. The average daily number of prisoners in the Bhúj Central Jail was 155.

Infanticide.

2,795 unmarried Jadeja girls had to be accounted for, of whom 197 died, 5 emigrated and 114 married. The deaths are nearly equal to those of last year, but the number of marriages, 114, was 95 less. Grants are made on marriage from the Infanticide Fund to those who are not rich enough, and Rs. 8,000 was so paid during the year.

Civil Justice.

3,450 fifty civil suits were decided, and the average value of a suit was Rs. 151.

Registration.

1,145 documents were registered and the fees realised were Rs. 4,783; the falling off in transactions is attributed to greater prosperity.

Municipali-

There were six municipalities. Bhúj has an income of Rs. 41,600, Mándvi of Rs. 34,600 and Anjar of Rs. 11,600; the others are small institutions. The money appears to be well laid out in cleaning, wrtering and lighting the roads and in a few local improvements. In all Rs. 84,800 were spent. The incidence of the tax is not 1 rupeo per head.

Season.

The monsoon commenced with a cyclone which swept over the Gulf of Cutch and did some damage to the shipping at Juna and Mandra. The fall of rain was 24 inches 35 cents against 13 inches 88 cents of the previous year. The excessive fall in some talukas did some damage to cereals, but the cotton crop was excellent and made up for all losses. There were a few deaths from cholera.

Forests.

There are no forests in Cutch. The 17 reserves contain kher and babul fit for firewood, but building timber has to be imported. The reserves are useful for grass, and a quantity valued at Rs. 13,300 was stocked at Bhúj for the Darbar.

Mines and Quarries. Good stone is found in Cutch, and the Khavda yellowish marble is being exported to Baroda for the Gaekwar's palace. Rs. 2,772 was derived from the manufacture of alum; there is some difficulty in obtaining cheap potash to improve the manufacture as desired.

Manufactures. Silk and cotton manufactures do not thrive under the present competition, but a partial remission of duty was allowed on cloth imported to encourage the dyeing industry and its export to Africa. The result shows that the number of bales of blue cloth exported has risen from 376 to 586. The Cutch silver work is universally admired.

Trade.

The Rájputána Railway is said to have had an injurious effect upon the trade of Cutch, as traffic is diverted to Bombay and Karáchi. But the quantities of merchandise imported and ex-

ported are on a level with the previous year, although values have fallen (imports Rs. 58,53,400, exports Rs. 17,01,900). The trade in ivory and blue cloth was better and the quantity of shipping has increased. A large number of vessels arrived at and left Cutch, which would point to an increase of sea-borne traffic. A breakwater to protect Mandvi harbour is under construction and the Tuna creek is to be deepened. The customs duties are for the most part farmed, and realised Rs. 7,45,000.

The breakwater at Mandvi designed by Mr. Ormiston has been PublicWorks. completed to the length of 1,350 feet originally intended, and it is now decided to carry out the pier parallel to the breakwater which that engineer also proposed. This work and two dredgers cost Rs. 1,17,900 during the year. Wooden piles were employed to protect the face of the bank in the Mándvi creek. Bhuj-Mándvi road was repaired and a bridge and culverts constructed at a cost of Rs. 49,600. A section of the Bhúj-Tuna road cost Rs. 12,800 and the Anjar-Tuna section Rs. 11,300. Other important works were the Mandra school-house for 200 boys and 3 other schools for 100 boys each, the Rapur dispensary and hospital, the Anjan dispensary, the Bhúj public market, and the Bhúj Alfred High School, of which the foundation was laid by His Excellency Sir James Fergusson. The Gadhshisa irrigation works to reclaim Panari cost Rs. 3,500.

The postal system of the Gujarát Native States has been introduced into Cutch and 18 new post offices were erected, making a total of 38. The cost was Rs. 2,200, and although this is a little more than the former cost to the Darbar yet the greater number of post offices and the facilities given to the public are a great gain in convenience.

The revenue was Rs. 16,03,555, the expenditure Rs. 14,48,422, surplus Rs. 1,55,133. The largest items were customs Rs. 7,44,500, land revenue Rs. 5,50,200, ábkári Rs. 40,800, stamps Rs. 36,800, and interest on capital invested in Government promissory notes Rs. 56,600. This year a further sum of rupees one lakh was invested. Under expenditure there is Rs. 1,86,900 for the subsidiary force and Rs. 51,200 for the sibandi, Rs. 1,56,100 for customs establishments, Rs. 1,11,200 for police, Rs. 54,500 for civil courts, Rs. 35,300 for education, Rs. 26,800 for medical, and an item of Rs. 76,200 for Darbár stables and conveyances. Under extraordinary expenditure there is a most satisfactory item of Rs. 2,99,500 for public works. The cash balance was Rs. 10,57,300, of which Rs. 6,32,600 were invested in Government securities.

The land revenue is paid in kind and the Darbar share is sold by auction. The customs are mostly farmed and realised Rs. 7,44,500. Government were pleased to allow the Darbar a drawback of and instead of the duty on opium imported and the receipts have increased by Rs. 10,000 to Rs. 25,400. There are four places where salt is manufactured for the use of the local consumption of Cutch and nearly 20,000 maunds were sold.

The total revenue derived from the six municipalities amounts to Rs. 99,900.

Post.

Revenue.

Municipal Revenue.

Chap. I.

Curcu. Mint. The State has coined money since A.D. 1510 and the unit is the kori, 379 koris equal Rs. 100; but the exchange value rises and falls and on an average is 375 koris to Rs. 100. The mint was closed for six years, but recommenced work in April 1881, and coined koris 45,22,000, the profit to the Darbár Being Rs. 57,200.

Census.

The area of Cutch is about 6,500 square miles and of the Runn 9,000 square miles. The census found 8 towns and 1,078 villages with a population of 512,084—males 260,251, females 251,833. The number of houses was 153,009. There are 78 persons to the square mile and 5.02 per occupied house. A comparison with the census of 1872 shows an increase of 23,577 persons, 5,167 males and 18,410 females. Among the Jadeja Rájputs it is noticeable that there were 10,364 males against only 4,604 females. There are only five towns with more than 5,000 inhabitants and the tendency appears to be to decline in numbers.

Births and Deaths. Dispensaries. The number of births recorded was 6,212 and deaths 4,282. There were more deaths and less births than in the previous year, and the increase in deaths is said to be due to malarious fever of a bad type. An average of about 985 patients attended daily at the five dispensaries which cost Rs. 22,900. Of the whole number of 64,400 only 82 died and 56,900 were cured. Suitable buildings were provided for the Anjan and Rapur dispensaries. 3 students are being educated at the Medical School at Ahmedabad on condition that after they have passed they will serve in the Cutch Medical Department. The lunatic asylum at Bhúj has been placed in a now building; it contains 8 lunatics.

Vaccination.

18,936 persons were vaccinated, an increase of 1,061, and 98 per cont. were successful. 86 persons were re-vaccinated. The progress is most satisfactory, and has risen in ten years from 1,900 to 19,000—the cost was Rs. 7,700.

Instruction.

The total male population is 260,200, of whom 2.5 per cent. were under instruction, 10.5 per cent. were able to read and write, and 87 per cent. were illiterate. 8,195 boys and 458 girls were under instruction, including the children who attend indigenous schools. The number of recognised schools was 86 attended by 5,342 scholars. There was 1 high school which did not show well at the University Examination; 42 boys learn English. There were 68 lower day schools, 7 night schools and 7 girls' schools. The day school passed 73 per cent. of the scholars and 116 girls passed examinations out of 458 attending school, and steady progress is perceptible. Looking at the progress made in ten years the number of schools has risen from 24 to 86 and the scholars from 1,200 to 5,342. Rs. 56,300 was spent on education including buildings.

There are six libraries at the principal towns and a small museum attached to the School of Art at Bhúj.

PA'LANPUR.

PA'LANPUR.

Area, 7,775 square miles; Population (1881), 576,475; Revenue about Rs. 12.00.000.

The Political Superintendent of Pálanpur has jurisdiction over a group of 13 States, of which Palanpur and Padhanpur are the largest. Four of these States are under Musalman Chiefs, seven under Rajputs, and two under Koli Thakurdars. Except the Diván of Pálanpur, the Nawab of Radhanpur, the Thákor of Tharád, and the Rána of Váv, the petty Chieftains are little removed from the rank of cultivators and are poor and ignorant; their States have a population of from 5,000 to 20,000 and a revenue of from Rs. 3,000 to Rs. 30,000.

His Excellency the Governor visited Palanpur on the 30th Chief events. December 1881 and was received by the Diván and principal officials; on the following day he left for Abu. On more than one occasion apprehensions were excited by the movements of Bahirwatias and Bhils on the Sirohi side of the border, but peace was not disturbed. The jurisdiction over eight villages which has been in dispute between Pálanpur and Tharád since 1825 has at length been judicially settled in favour of Pálanpur. The Nawáb of Rádhanpur claimed double salámi from the Rájputs on the occasion of a marriage in his family and based the demand on ancient custom; the Rájputs resisted it, but most of them have since agreed to pay the demand by easy instalments. In September 1881, Oomerkhan, the Chief of Varahi, died, leaving a boy, who was born a few days before his father's death, and not long afterwards a characteristic charge was made that the child had died and had been replaced by a changeling, but this could not be substantiated upon careful investigation. The State has been taken under direct management and a rough inquiry discloses that it is indebted to the extent of Rs. 1,09,500, while the revenue is

The revenue survey of seven villages in Pálanpur has been completed and that of four others is in progress. The area measured was 10,142 acres, but no classification was made.

only Rs. 14,000 a year.

Four attachments were made during the year and four were Estates under removed. They are imposed usually in the interests of the parties concerned or for the satisfaction of the decrees of civil courts. The only noticeable one is the attachment of the estates of Oomerkhán of Váráhi on his death.

A regular police force of 520 savárs and 274 foot is maintained which includes 265 savárs of the Gáckwár's Contingent and is exclusive of 4,930 village police. An epidemic destroyed 215 horses of the police. The system in force of absolving a village from responsibility which was able to trace the tracks across its boundary has been changed so far as to make responsibility devolve primarily on the State where a traveller is plundered and to shift it only where the robbers are followed in hot pursuit into another State and handed over to the authorities. The value of property stolen was Rs. 62,700, of which Rs. 12,700 or 20 per cent. was recovered against 14 per cent.

Survey.

attachment.

Police,

Chap. I. POLITICAL

PA'LANPUR.

Criminal Justice.

The total number of criminal trials was 899, the number of persons tried 2,059, of whom 961 were convicted and 1,098 acquitted or discharged. Of the above trials, 263 were disposed of by the Political Superintendent and his two Assistants and 636 by the The number of offences was 1,596 against 777, six Thánádárs. and this large increase causes an increase of trials and convictions. Of the graver offences there was only I trial for murder, 18 for grievous hurt, 1 causing miscarriage, 3 rape, 2 dacoity and 1 for forgery. The Political Superintendent sitting as Sessions Judge disposed of 29 criminal appeals, in which he confirmed 15 sentences, reversed 13 and modified 1.

Some of the Thánádárs have charge of more than 100 villages and are expected to inquire into every offence without the aid of regular police and to try or to commit them to the superior courts. They also decide civil suits under Rs. 250 in value and inquire into Valtar cases or claims for compensation, and have other miscellaneous duties. Altogether the work is more than they can perform.

The above figures are irrespective of criminal statistics in the courts of Native Chiefs. The Chiefs of Pálanpur and Rádhanpur have full civil and criminal jurisdiction within their States and some of the petty Chiefs have limited powers conferred upon them or are required to employ competent officers to exercise their powers. The Political Superintendent was able to persuade the Diván of Pálanpur to make great changes among the Judges and Magistrates of his Courts, as numerous petitions complaining of injustice had been received and native gentlemen have been appointed who have had a practical acquaintance with the working of courts in British districts. A Tálukdár of Tervádá has never used his powers except on one occasion when he released from confinement a sepoy of his who had been arrested for theft. There is no head of this State, and as it contains a population containing many of the most notorious thieves and receivers of stolen goods in this part of the country, the want of proper police supervision is felt severely by all its neighbours. At Sumao in Kankrej there was a riot in whick sticks and swords were freely used and severe wounds were inflicted; but as it was found impossible to ascertain the history of the case, a fine of Rs. 400 was imposed upon the village.

The Darbar courts tried 2,242 criminal cases concerning 3,448 persons and convicted 1,590 and released 1,758. The number of offences was 2,318 against 2,510 and shows a satisfactory decline of 12 murders, 3 of culpable homicide, 6 of causing miscarriage. 4 of dacoity and 130 of theft.

Prisons.

397 persons were sent to the Superintendency Jail and 320 were released, the daily average in imprisonment being 108 against 73. Weaving was introduced and the prisoners make their own blankets and coarse clothing. They also grow their own vegetables. In the Darbar jail of Palanpur 597 persons were confined and in the Rádhanpur jail 361 persons.

Civil Justice.

The number of civil suits disposed of was 899 of the value of Rs. 81,809; of these 72 were decided by the 2 Political Assistants.

PA'LANPUR.

and the remainder by the 6 Thánádárs. The number of political cases decided was 364 valued at Rs. 48,432, of which 9 were suits for land, 13 boundary disputes, 339 compensation claims and 3 miscellaneous. Including appeals the total of civil and political suits decided was 1,309 against 1,651; 43 boundary disputes were decided.

The Darbar courts disposed of 1,614 civil suits valued at Rs. 1,25,921 and 108 appeals besides 10 special appeals and 444. political cases, of which 9 related to land, 409 to compensation and 26 miscellaneous. Altogether there were 2,195 suits and appeals valued at Rs. 1,77,297.

There is no municipality but there is a municipal secretary at Municipality. Pálanpur. There are sanitary rules, but they do not appear to be enforced. The town is not too clean and the outskirts are very filthy. Rs. 1,000 was spent on a road in the town which was much needed.

The several States maintain a body of 522 horse and 1,109 foot, nearly the whole of which is located in Pálanpur and Rádhanpur.

In the early months of the monsoon the amount of rain that Weather and fell was equal to the average fall of the whole year and then the rain almost entirely ceased. Badly-built houses fell into ruins and the floods did some injury to land in Kankrej. The kharif crops were mostly destroyed, but the rabi was good, so that grain was plentiful and prices moderate. The average rainfall was 32 inches 42 cents.

There are valuable forests in the north of Pálanpur, but a contract being given to a Pársi to cut firewood for 5 years, he injured the tract considerably by cutting down timber without regard to his agreement. The contract was cancelled, but a great deal of damage has been done, especially along the railway line. A few road-side trees have been planted in Radhanpur.

Rupees 9,137 was spent chiefly on dharmshálas and wells. Public Works It is also reported that Rs. 10,700 was spent in Rádhanpur on public works, and the account shows that Rs. 22,900 was spent on buildings in Pálanpur.

There are several funds in charge of the Political Superintendent. The total receipts were Rs. 1,73,200 and the charges Rs. 1,07,900. The receipts are derived from Imperial salaries, compensations for theft, attachments, the cost of the Palanpur levy contributions paid by some of the petty Talukdars, court-fees, criminal fines, &c., and the charges are the payment of the Thanadar establishment, vaccination, feeding prisoners in jails, minor buildings and repairs, payments of debts from attached properties and compensation to sufferers by theft, the pay of the levy, &c.

The Pálanpur State alone has furnished a short account of revenue and expenditure, from which it appears that the revenue was Rs. 3,86,600 and the expenditure 3,83,000. The land revenue yielded Rs. 1,33,500, custom and transit duties Rs. 1,05,900 and taxes Rs. 60,800. The pay of the levy and sibandi was Rs. 1,29,000, the Gaekwar tribue was Rs. 50,000, public works Rs. 22,900 and the Diván's household Rs. 71,000.

Military Force.

Crops.

Forests.

Revenue.

PA'LANPUR.

The census of 1881 shows a population of 566,475 against 502,586 in 1872, an increase of 63,889 in nine years, or 12.6 per cent. The increase is general, but Tharad and Kankrej appear Census. to have increused faster than the other States. The details are given below:-

Q.		Census.	Census.
		1872.	1881.
Pálanpur	ė	215,972	236,461
Rádhanpur		91,579	98,129
Tharád		46,497	58,985
Morváda	•••	6,595	6,509
Váv .	•	23,081	27,735
Suigam		10,104	11,521
Diodar		19,701	24,061
Terváda	•••	7,338	8,846
Bhábhan		5,659	7,222
Kánkrej	• • •	37,771	45,164
Váráhi	•••	20,096	21,376
Santalpur	••	13,574	15,136
Chádchat	•••	4,619	5,330

Dispensary.

At the three dispensaries 14,500 persons attended for treatment including 7,200 men, 2,900 women and 4,300 children.

Vaccination.

The number of persons vaccinated was 17,786 against 15,180, and the cost was Rs. 1,722, or about 1 anna 7 pies per head.

Instruction.

A school was opened at Diodar and the total number is 29. The number of pupils was 1,770 against 1,594 and the school-fees were Rs. 838 against Rs. 720. The expenditure was Rs. 9,600. The school-fees, except in Palanpur, are paid into the Political Superintendent's treasury to form a pension fund for schoolmasters; and as the States demur to increase the number of schools unless the fees are paid to them, the question is under consideration whether a change should not be made in the present practice. The Nawab of Radhanpur takes a great interest in education and intends to establish a girls' school.

MAHI KA'NTIIA.

Area about 4,000 square miles, Population (1881), 517,485; Revenue (1881), Rs. 10,12,500.

This tract comprises 58 estates of which I'dar is the largest and covers more than half of the whole country. Eleven other States are of some consequence, the remainder are petty. The young Maháraja of I'dar has lately left the Rájkumár College after two years' residence, and can speak and write English very fairly. During the year he was associated with the Assistant Political Agent to learn the method of administration and travelled all over the State in his company.

The Bhil disturbances excited some attention. Across the border there had been some popular risings in Meywar, and as anarchy is infectious the excitement was caught by the Bhils in the Pol State in the Mahi Kantha who rose against their Chief, besieged him for a week and plundered some of the shops in his capital of Ghoradar. An agreement was extorted from him and

MAHI KA'NTHA.

also from a Bhumia or vassal chief under I'dar making certain concessions to the Bhils. Flushed with success they attacked Gallora on the 30th June 1881, but were repulsed by the police and lost 3 of their number killed, but managed to make off with 150 cattle and looted 2 or 3 houses. Cattle-lifting now became frequent, until the Political Agent fined the Chief of Pol Rs. 400 on account of the value of the cattle taken away by his subjects. This had an excellent effect, and combined with the measures taken by the special officers who were deputed by Government to inquire into these disturbances and to cause the restoration of plunder and payment of fines, the country was not long after pacified and the extorted agreements were cancelled. It is not easy to assign any particular reason for these risings among so ignorant and inflammable a people as the Bhils.

Later in the year the carriage of the Political Agent was plundered on the Ahmedabad-I'dar road in the belief that it contained treasure for the Sámláji Fair, and the audacity of this proceeding created a deep feeling of alarm among traders and peaceable people. To allay it, two companies of Native Infantry were sent to I'dar. The robbers were fortunately apprehended, some of the stolen property buried in the hills recovered and 18 of the number were convicted and sentenced. Since then there have been no loots in that part of the country; and as 14 of the leading men round Waghera, another notoriously unsafe place, have also been taken and severely punished, it is to be hoped that these lessons will be remembered and the future conduct of these restless people may be more peaceable and quiet. The Bhats or village bards have according to the custom of the country given security for the good behaviour of these villages, and their influence it may also be hoped will be exerted on the side of honesty and good government. The material condition of the Bhils in these parts is not unsatisfactory, and Major Probyn, who has an intimate knowledge of Khandesh, considers that they are better off than the Bhils there. They grow good crops of gram and Indian corn, many of their houses are tiled and their women have a well-to-do appearance, notably in Pol. The Bhils in the east are better behaved than those in the north and this is owing to the salutary influence of a local saint who guides them in the paths of peace.

There were 15 estates under attachment or management Estates under chiefly owing to the minority or indebtedness of the Chiefs. The attachment upon Dadhália and Punádra was withdrawn during the year and the State of Varsoda was attached in consequence of indebtedness. I'dar has been released since the close of the year; it has remained under attachment for 13 years during the long minority of the Chief and a special account of the Political Agent's stewardship will be more appropriately given in the report for 1882-83. Rs. 94,600 of debt and interest was paid off, leaving Rs. 1,40,900 due to creditors at the Diwali. The Thakor of Varsoda has wasted a great deal of money in the endeavour to prove the illegitimacy of the child of his senior wife. The case was decided in favour of the child and arrears of maintenance to the amount of Rs. 7,000 ordered to be paid to the wife.

attachment.

Chap. I. 12 POLITICAL.

MAHI Ka'ntha.

Not an anna was paid and Government have been obliged to order an attachment.

Police. ,

2.392 offences were reported to the police, 1.312 persons were arrested and 1,254 were sent up for trial; of these 706 were convicted and 528 acquitted: 54 per cent. of those arrested were convicted and 56 per cent. of those who were sent up for trial. Compared with the previous year the number of offences has slightly decreased, but the number of offenders in each case was larger and the results were not so satisfactory, as the percentage of convictions has fallen from 67 to 54 of those arrested and from 67 to 56 of those sent up for trial. I'dar is the only State which maintains a regular police; in the others the village police is supervised by inspectors. The Gáckwár's Contingent of horse patrols the country in detachments and helps in tracking, but they do not consider this their proper business and confine themselves to preventing breaches of the peace. The pay is small, but they are paid regularly and their arms are inferior. The I'dar regular police numbers over 400, largely made up of undrilled veterans at a cost of Rs. 36,300.

Stolen Property. The amount of property stolen was valued at Rs. 85,900 against Rs. 62,200; Rs. 27,600 was recovered, which is 32 per cent. against 22 per cent. in the previous year.

Graver Crimes. Dacoities have numbered 116 and in these and other robberies 17 perons lost their lives chiefly when the country was unsettled. Since January 1882 violent crime has greatly decreased and the dacoities have been only 5, all without killing or maining. Bosides these cases 19 persons were killed and 35 wounded in quarrels about women or other causes common amongst Bhils. There are now no "Bahirwátiás" (outlaws) in the Mahi Kántha and the custom is dying out.

Infanticide.

The Marwari caste is under surveillance and consists of 982 males and 1,162 females, of whom 320 are unmarried and are all under 15 years except 18 girls. In most of the marriages assistance was given from the fund, of which the receipts were Rs. 1,365 and Rs. 1,347 was spent; 10 boys and 13 girls died, but in no case were the circumstances suspicious.

Criminal Justice.

The Chiefs are divided into classes according to their wealth and importance and have criminal powers according to their grade, but cannot try heinous crimes except the Chiefs of I'dar, Pol and Dánta. The total number of offences brought before the courts was 3,203 concerning 3,402 persons, of whom 1,254 were arrested by the police, 496 persons were discharged, 847 acquitted and 1,786 convicted; 61 were committed to the Court of Sessions, 90 persons were sentenced to over six months' imprisonment and 382 to lighter terms: only one was hanged.

The Political Agent tried 14 cases and convicted 41 persons.

Rs. 14,000 was imposed as fines and Rs. 9,500 was recovered. Four cases were confirmed upon appeal, 5 were modified and 6 reversed.

Prisons.

There is one large prison at I'dar and 25 locksups in other parts. The number sent to jail was 628 and the daily average

was 145. The cost was Rs. 12,800 against Rs. 17,500 in the preceding year.

Mahi K'ANTHA.

The Chiefs are also invested with civil powers according to Civil Justice. their class; 1,663 suits were filed in 42 courts and 1,905 were disposed of, leaving 452 in arrears. The aggregate value of property in dispute was Rs. 1,01,000, or an average of Rs. 60. The Political Agent disposed of 11 appeals, leaving 20 in arrears. 584 political cases were decided by the Agency courts against Political cases. 625.

The rainfall, 44 inches, was over the average and fell heavily in Weather and August, damaging the bájri. Rice, wheat and sugar-cane were very good. Wheat is grown in considerable quantities, but there is not much cotton and not of good quality. In I'dar 92 new wells were sunk for agricultural purposes.

Crops.

A survey was made of the I'dar forests by a native officer of the Forest Department, whose services were borrowed for the purpose. The proposal is to take up 113 square miles for forest, of which 54 square miles are to be reserved, the remainder to be open to the public, and 120 varieties of trees are to be preserved. It is anticipated that teak will flourish well and that the forests will be valuable in time. The proposals only relate to the I'dar khálsa villages, but the Sardárs also preserve very valuable tracts and they may also enter into the scheme.

Forests.

The quarries at Ahmednagar are much prized and most of the buildings at Ahmedabad were built with it. It is thought that it might be practicable to float the stone down upon rafts and this experiment is about to be tried.

Quarries.

Trade is not flourishing except perhaps at Mánsa. The transit duties are very heavy and it is almost impossible to go a few miles without being stopped to pay toll. As the Maharaja is now installed it is perhaps possible that he might make the sacrifice of revenue that is necessary in abolishing or modifying them. The usual fairs were held at Sámláji and Bramhakhed, but the disturbed state of the country interfered with their success. At Sámláji the goods brought for sale (Rs. 2,59,300) were little more than half the value of those in 1880-81.

Trade.

The trade across the frontier passes chiefly via Samora, and the value registered at the naka was, imports Rs. 74,02,500 and exports Rs. 2,73,700. At Posina the value either way was about Rs. 37,000.

PublicWorks

About Rs. 25,500 was spent on public works in I'dar, of which Rs. 4,700 were contributed by the people. The chief work was a causeway across the Háthmati at Ahmednagar: the old crossing was difficult and rocky and many cattle were disabled in consequence. Another small bridge was built at Danamli, a small irrigation work at Waranshi was made and 5 new school buildings were put up, besides dharmshálas at I'dar and Sabarpur. The Katosan Thákor appears to appreciate the benefit to be derived from public works, and in Bavisi Rs. 3,300 was spent. Some Rs. 2,300 was spent on a road in Sadra and Rs. 2,200 in Ilol, which is under attachment; but most of the Chiefs are not

Mahi Ka'ntha.

disposed to make any outlay on public works. At five post offices there is a daily delivery.

It is proposed to make a metalled road at the expense of Government from Dákor to Bayar and thence to Modása. The I'dar State has given the land free and has agreed to abolish transit duties on the route.

Revenue.

The total revenue obtained by all the States in Samvat 1937 (1881-82) was Rs. 10,12,500 or Rs. 15,300 less than the previous year. If these figures may be accepted as correct, the taxation is Rs. 1-15-4 per head. The following taxes are not unusual:—

- 1. Plough tax-Re. 1-0-0 to Rs. 3-8-0 per plough.
- 2. Field tax—Re. 0-9-6 to Rs. 1-12-0 per burnt field.
- 3. Wood tax—Rs. 1-10-0 to Rs. 1-12-0 from each wood-cutter every third year.
 - 4. Food for 4 men when going to fix the above amounts.
 - 5. Waje at 1th of the crops.
- 6. Sukhdi, from 4 sers to 1 maund per house, 100 ears of makai and one measure of ground gram per house.
 - 7. Tax on each house purchased according to means.
 - 8. Tax on each marriage, 8 annas.
 - 9. Tax on sale of bullocks, 4 annas per head.
- 10. One-fourth produce of mahura trees, fee of 4 annas per each house for collector.

In addition to the above, free labour is exacted, such as conveyance of grass, firewood and military service if required. All these taxes and cesses may not be punctually paid, but they are debited to the rayat's account and he pays up as he can.

The States get their opium from Government duty free and retail it in their districts at full rates; most of them have found that this system is profitable and are eager to indent for more opium than they can require for local consumption. In return they are required to assist in detecting smuggled opium; 49 offences were dealt with.

Local Funds.

There are in all 13 small funds which are accounted for by the Political Superintendent. The total receipts were Rs. 18,400 and the expenditure Rs. 14,400. The total balance at their credit was Rs. 33,600 at the close of the year. The most important are the Thánádár's fund and the Sádra Bázár Fund.

Census.

The population according to the census of 1881 was 577,485, and in 1872 it was 447,056, an increase of 29 per cent.

Births and Deaths. There were 12,041 births and 8,667 deaths in 1881-82. In 1880-81 these figures were 12,235 and 8,400 respectively.

Dispensaries.

There are dispensaries at I'dar and Sádra, which treated 5,800 patients. A new dispensary has been opened at Ilol and another was about to be opened at Katosan.

Vaccination.

11,258 persons were vaccinated, which is a great improvement upon previous years, and all but 212 cases were successful.

KA'NTHA.

There are 60 inspected schools in the Mahi Kantha with 3,255 scholars, an increase of 3 schools and 184 scholars. The percentage of scholars to population is '06, and 83'33 is the average number of square miles to each school. The success at examinations was very poor. The cost was Rs. 18,900 including new buildings, and an English class was opened at I'dar. There were 3 girls' schools. There is a school at Sadra for young Talukdars; the number of boys attending it has increased, as the Chiefs are gradually realising the fact that some elementary education is indispensable in the present day.

The 31 indigenous schools are attended by 306 scholars. The masters are fed daily in turn by each boy, and on holidays a present of a pice or so is given by each. The boys are taught the rudiments of accounts, the calculation of interest and how to conduct ordinary trading correspondence.

The library at Sadra is kept up by subscriptions from Taluk- Instruction dars and officers of the Agency.

KA'TIIIA'WA'R.

Area. 20,542 square miles; Population (1881), 2,348,325; Revenue about Rs. 1,53,00,000.

Káthiáwár is divided into 188 separate States, large and small, of which 13 pay no tribute, 96 are tributary to the British Government and 70 to the Gáckwár. They are arranged into 7 classes with varying civil and criminal powers. Chiefs of the first and second class exercise plenary jurisdiction, and the judicial powers of the lesser Chiefs are graded in a diminishing scale, the residuary jurisdiction being vested in British officers, each superintending a group of States. The Political Agent controls the whole. Public business is thus mainly conducted by and at the cost of the Darbárs. "The numerous petty courts and their people form a large body of rich resident landlords, spending their rents on their estates; and the ministers, officials and landlords of various station and wealth contribute to impart a brisk vitality to the progress and general well-being of the country."

His Excellency the Governor arrived at Wadhwan on the 4th January 1881, and rode the same day to Morvi where he visited the Thákor Sáheb. The next day he left for Cutch. His Excellency had intended to return to Rájkot for the purpose of investing His Highness the Thákor Sáheb of Bhávnagar with the insignia of the Order of a K. C. S. I., but he was unfortunately prevented by a sad domestic bereavement and the ceremony devolved on the Political Agent. The presentation took place at a Darbár held in Rájkot on the 17th January and was imposing and impressive. The first class Chiefs of the province; who are all Knights of the Order, and all the second class Chiefs available, attended on the occasion with large retinues and warmly congratulated the new Knight. During their stay they displayed a spirit of mutual cordiality and good-will which could not have been looked for a few years previously, and were profuse in their hospitality to each

Ka'thia'wa'r. other. Under its present enlightened administration Bhavnagar has achieved the distinction of being the leading State in the province.

The horror excited by the attempt to assassinate Her Majesty the Queen found expressions in addresses of loyal sympathy by the Chiefs of Káthiáwár, and the Nawáb of Junágad distributed Rs. 1,000 in charity within his territory as a mark of gratitude to Providence for the preservation of Her Majesty's life.

The daughter of His Highness Sir Mansingji Ráo Sáheb of Dhrángadra was married to His Highness the Maháraja of Jeypur in December with much pomp and ceremony. The Maháraja was royally entertained by the Ráo Sáheb and returned to Jeypur highly gratified with his reception and with the gorgeous dowry in ornaments, clothes and furniture with which the lady had been endowed by her father.

.The Thákor Sáheb of Gondal was married in June to four wives simultaneously; the marriage ceremonies cost Rs. 2,60,000.

The Thakor Saheb of Wadhwan was formally installed in power in July, Government having anticipated his legal majority by ten months, confiding in his ability and good sense.

Sáyla.

Chúda.

The Chief of Sayla died in September and was succeeded by his son Vakhtasingji, the State is much involved and cannot afford to do anything in the way of public works. The Chúda State after some years of attachment has been freed from debt and handed over to the care of its Chief under proper arrangements for its future welfare. It is but one amongst many examples of the way in which a fine property may be rescued from a State bordering on insolvency and handed over to its Chief in a highly prosperous condition by the benevolent action of the Agency. The income is less than Rs. 80,000 a year. The habilities in 1877 amounted to Rs. 1,29,700, and all these have been cleared off. A new jail, school and dispensary have been built. The town which is now scrupulously clean has been connected with the railway station 4 miles off by a first class metalled and bridged road. The police and courts of justice have been reformed and an energetic Kárbhári is assisting the Chief to carry out the good intentions which he professed on being restored to the exercise of his authority.

Cyclone,

The great storm of 12th July did immense damage. It swept across Navánagar, Morvi and Dhrol, sweeping away roads and bridges and destroying thousands of houses. The main roads from Dhrol to Navánagar and Jodiya were entirely wrecked, embankments were breached and those bridges which were not swept away were left standing disconnected and bare. The road from Jodiya town to the bandar constructed twenty years ago was completely destroyed. Great damage was caused in the towns which were invaded by flooded rivers; while torrents of rain, aided by the hurricane, completed the destruction of thousands of dwellings. After the storm the corpses of beasts and birds of all descriptions, buffaloes, oxen, donkeys, sheep, deer and small game strewed the ground and poisoned the atmosphere in all directions. Trees were uprooted or broken and the rivers were in deeper flood than had ever

Chap. I. POLITICAL

KA'THIA'-WA'R,

In Navánagar alone the public loss was estimated at been known. 9 lákhs of rupees and in Morvi and Dhrol the loss is proportionately heavy. In Morvi roads and bridges were destroyed and houses collapsed, and the towns of Morvi, Tankara and Wavania were much damaged.

The State of Navánagar can ill afford this heavy loss. It was Navánagar Debt. indebted to the amount of 214 lakhs, but great exertions have been made to retrench and lighten the burden. By July 1881 about 41 lakhs had been paid off, and it was expected a further sum of 41 lakhs would be paid off by July 1882. A part of the debt is guaranteed by Government.

Dasáda.

The important estates under management for debt are Bantva Estates under and Jhinjhuvada. Kamludin Khan's estate, the half share in management. Bántva, was attached in 1879 for mismanagement and extravagance: the debt was found to be nearly 3 lákhs, which has been paid off and the estate is now to be handed over to Gajaffar Khan (Kamludin having died), who has been educated at Rajkumar College, greatly improved as regards roads and other works. Jhinjhúváda has an area of 189 square miles and is sub-divided Jhinjhúváda. among a number of Koli proprietors who managed to incur dobts amounting to Rs. 51 lákhs. The State was attached in 1874 and Rs. 2,96,000 has been paid off. Dasáda is also under attachment for a debt of Rs. 1,22,000, of which Rs. 17,200 have been repaid. There are several States and estates managed by the Agency during the minority of the Chiefs who are whenever possible sent to the Rájkumár College for education. The most important of these are Gondal, Vánkáner, Vela and Láthi.

The following table gives the receipts and expenditure of the estates under management; particulars have not been received of the estates which are omitted :-

					Receipts	Expenditure.	Deht paid off during year
					Rs.	Rs.	Rs.

^{*}Large outlay on public works.

201 cases were heard and decided during the year as compared with 192 in the previous year; these cases included 776 disputes; 234 fresh suits were filed and a balance of 335 remained in arrears. Of the settled cases nearly 60 percent, were decided in favour of

Rájasthánik Court.

[†] Large outlay on railway and on marriage.

Ka'TIIA'-WA'R.

the Girásias and 40 per cent. in favour of the Chiefs. Only two appeals were made to Government against decisions of the court and in both the decisions were confirmed.

The court among other important rulings has held that in joint tenures neither Darbár nor vassal can enhance their dues without mutual consent; that the Darbár cannot demand any fixed annual payment on villages which have lain waste without the fault of the vassal; that no interest in a Girásia's land can be sold in satisfaction of a civil decree, and that a vassal can only be held liable to pay compensation for robberies committed within his limits when criminal negligence or complicity have been proved against him.

The Rájasthánik Court was established in 1873 as a Court of Exchanger for the settlement of the rights and claims by Chiefs upon their great vassals and hereditary landlords. The procedure is to make a survey with a record of rights and in case of disagreement between a Chief and the Girásia the case is referred to the court for decision. In this way the court has decided 1,598 cases, in all involving over 6,600 items in dispute and 300 boundary suits, besides numerous miscellaneous applications. The court was originally established for three years, but the time was extended; and as the time had again lapsed, the States decided to prolong it until the close of 1881. Apparently this is an indication that they value the work that has been done in the peaceable establishment of definite rights and principles of action in place of the never-ending disputes and disorders which in past time convulsed the country, although their absolute powers over their vassals have been circumscribed. This year the Rahus of Báriya objected to have their lands surveyed, and desorted their villages in a body; but they soon agreed to a settlement and the discontented Girásias in the other districts have followed their example and acquiescod in the survey. 36 villages were surveyed in the year, covering 122,592 acres.

Police.

The total number of offences reported to the police was 10,563 against 11,975. The number of persons arrested was 12,641, of whom 11,787 were brought to trial and 6,783 convicted, which is 53 per cent. of those arrested and 57 per cent. of those sent for trial. The total value of property stolen was Rs. 2,44,600 against Rs. 4,11,800, and the percentage of recovery rose from 31 to 34 in 1881-82.

There has been no noticeable change in violent crime, the number of such offences being 37 dacoities and 106 robberies against 38 and 106. 3 persons were killed, 40 wounded and 2 hostages were carried away. There were only 2 Bahirwátiás (outlaws) out at the end of the year, one of whom went out on account of a dispute about a woman, but had done no damage.

The Jats, who are well armed and fairly horsed, continue to make occasional raids. Not long ago 6 of them made a descent into Sáyla, committed a dacoity and rapidly retreated to the north-east. A close pursuit by the police savárs was, however, successful in the capture of two of their number.

Ka'thia'. WA'R.

The stipendiary police consists of 5,794 foot and 1,017 horse, which cost Rs. 8,31,200. The foot police was increased by 188 men and the mounted by 8 men. Difficulty is experienced in obtaining detectives; the village patel who may be able to follow up a clue rarely knows anything beyond his border and cannot go much further. A small body of detectives has, therefore, been organised in some States as an experiment. degree of education is not high, but better mon are gradually being enlisted, and Kathi Girásias who ten years ago would have scoffed at the idea now enlist freely in the Imperial police.

The punitive posts at Achiana and Pipli were withdrawn, as the Chiefs had made better police arrangements, while that at Mánávao has proved a strong check upon crime, and the thána at Mália overawes the thieving Miánás of Mália.

1,170 criminal cases and 34 appeals were decided by the Agency courts, including 40 serious cases, a slight decrease upon the numbers in the past year. The Darbar courts disposed of 10,110 cases, convicted 10,447 persons and released 9,380. The Railway Magistrate decided 73 cases. The case which excited most interest was that in which Vrijeshji Vrijnathji, the Maháráj or high priest of Vishin, was convicted in the Chief Criminal Court of Káthiáwár of dishonestly receiving stolen property, and was sentenced to suffer two years' simple imprisonment and to pay a fine of Rs. 2,000. The case fell within the jurisdiction of the Darbár court at Navánagar, but His Highness the Jám handed it over to the Chief Court in consideration of the interests concerned and the Maharaj being held in reverence by his followers, who believe him to be an incarnation of the deity. It was clearly proved in the trial that an insured parcel carried by the post office was taken to the Maháraj, who dishonestly appropriated the greater part of the ornaments it contained, valued at Rs. 5,000. The conviction caused a profound sensation, and thousands of men and women importuned the Political Agent for his release, and numbers of petitions were sent to Government, and deputations waited on His Excellency, but Government considered that his crime had not been sufficiently punished and enhanced the imprisonment to five years.

Criminal Justice.

The total number of prisons is 147, including 126 in the Native States: 8,661 persons were sent to jail who were chiefly employed on extra-mural labour and in industries such as carpet-making, coir-matting, &c. At Rájkot the prisoners make their own clothes.

Prisons.

In the Agency courts 2,770 civil cases, 103 appeals and 129 Civil Justice. political cases were decided, which is 203 cases less than in the previous year, and the value of property litigated is put down at Rs. 20,09,200. In the Darbar courts there was also an increase of work, the cases being 25,415 involving property worth Rs. 30,37,500.

246 deeds were registered, of which 62 only related to property Registration. worth more than Rs. 1,000. In 4880-81 there were 208 deeds registered.

Chap. I. 20 POLITICAL.

Ka'THIA'-WA'R, Municipalities.

The municipality of Bhávnagar is carried on under rules similar to those in force in British territory. Its affairs are well managed by a committee of which His Highness the Thákor Sáheb is president. The expenditure, which is a little in excess of the receipts, amounted during the year to Rs. 34,513. There is also a municipality in Rájkot which is not very efficient. Cholera broke out three times in the town, while the neighbouring cantonment was quite free from it.

The military force maintained by some of the Chiefs is 14,137 men, and the Gáekwár's Contingent is 900 strong, employed on detached duty.

Weather and Crops.

The season was not altogether favourable for cereals, but the cotton crop was a good one and trade wonderfully developed. The great storm of July has already been noticed. The price of food-grains was higher than in the previous season in consequence of a short kharíf crop: the average rainfall was 25.50.

Forests.

The forest tracts in the Gir and Bávda hills have not received much attention, but there is satisfactory progress in tree-planting on road-sides and in reserved tracts. In Sorath nearly 49,000 trees were planted out. In Bhávnagar 8 large plantations have been laid out, and the trees, such as cocon palms, mangoes, casuarinas, &c., are now beginning to yield very favourable returns. In Navánagar 7,000 trees were planted and babul plantations were put down in Morvi and Gondal

Manufacture.

The ginning factory at Dhoráji has been doing a good business. The quality of the cotton was very good and the superior description called Lalia Kapas is rapidly ousting the Kála or pod cotton. A full press was put up during the year and is working fairly well. At Bhávnagar there are 15 steam-presses at work besides a spinning and weaving mill, and the town is increasing daily in size and importance owing to the liberal facilities given by the Darbár. Three new factories were erected during the year.

Trade.

The trade returns are very favourable and show that the country is in a prosperous state and that, great commercial activity has prevailed. The value of exports was Rs. 2,78,86,800 as compared with Rs. 2,21,23,800. That of imports Rs. 2,15,02,000 as compared with Rs. 2,06,24,800. The chief export is cotton, which was valued at Rs. 2,47,86,800 against Rs. 1,77,72,500, and was chiefly sent through the ports of Bhávnagar, which now benefits by its spirited public works policy in opening the country by the railway. Grain and wool were mostly exported from Navánagar and Morvi and also show a considerable increase.

The coasting trade was extremely active and a new line of passenger steamers has been started to run between Bombay and Mandvi, calling at Veraval, Mangrol and Porbandar. This last port is much frequented by coasting steamers, but the Rana's policy of interference with the passengers and the traffic does not tend to develop its natural capabilities.

Bhávnagar-Gondal Railway. The Bhávnagar-Gondal Railway was estimated to cost Rs. 84,26,000, of which Rs. 80,73,600 was spent in India to the close of the year. An average of 169 miles was open for traffic

Ka'THIA'-WA'R.

throughout the year 1881, and the gross earnings amounted to Rs. 6,88,300, the working expenses to Rs. 4,83,100, leaving a profit of Rs. 2,05,200, equal to Rs. 2.74 on the capital, but for the year ending 31st March it was expected that the profit would be nearly 4 per cent. The completion of the bridging was the great object aimed at, and progress was also made with earthwork, ballasting and permanent station offices, 51 bridges have been opened for traffic and some are imposing structures, as, for instance, the Rangola 14 spans of 40 feet girders, the Kaluhar 18 arches of 40 feet, the Ghela 11 spans of 40 feet girders; the bridge at Ranpur of 9 spans of 100 feet girders, that at Limbdi 25 arches of 40 feet, while the Bhagava at Wadhwan will be crossed by 9 spans of 100 feet girders. Six permanent and three temporary stations were completed and cotton platforms provided at most places. The space in part of the City Station at Bhávnagar has been reclaimed and the approach to it finished. The workshops at Gadhechi were greatly improved and a number of other works carried out; while, owing to the increase of traffic, 50 wagons and 20 third class carriages were added to the rolling stock Altogether Rs. 22,46,300 were spent on construction during the year.

The passenger traffic brought in Rs. 3,61,500 from 652,629 passengers, and the goods traffic Rs. 3,18,200 from 5,385,500 tons of goods. The former has developed very rapidly, perhaps owing in some measure to the 33,000 pilgrims who visited the Shetrunja Hill and Girnár. The goods carried were chiefly cotton 13,560 tons in the form of dokras, 5,896 tons of grain, 2,614 tons of seeds, 3,014 tons timber, and 2,500 tons fruits, oil, &c. These results are most satisfactory on a yet unfinished railway which has brought prosperity to Bhávnagar, Wadhwán, Jetpur and Gondal, and the example is likely to be followed by a railway viá Junágad, in which His Highness the Jám takes a great personal interest. The Thákor of Pálitána unfortunately is still averse to continue the railway to his capital, while the Thákor of Morvi is anxious to promote a line from Wadhwán to Rájkot.

A sum of Rs. 32,800 was spent by the Agency engineer in the construction of the trunk roads of the province during the year and Rs. 22,400 in their repairs. The road between Jetpur and Porbandar was much damaged by the cyclone in July and all available funds have been devoted to reconstruction. 45 miles of the Dhandhuka-Gogha road lying within the limits of Native States were made over to the charge of the Agency; it appears the road has lost much of its importance since the opening of the railway from Bhávnagar to Wadhwán. The principal buildings constructed by the Agency engineer from States' funds were the Girásia school at Wadhwan, cost Rs. 25,000, and travellers' bungalows and dharmshálás on the Jetpur-Porbandar road. Considerable progress has been made in the construction of roads as feeders to the railway; most of the stations are in course of connection with the neighbouring towns and through them with one or other of the trunk roads.

A total sum of Rs. 49,39,300 has been expended on public works in the province during the year from funds supplied by

Traffic.

Roads.

KA'THIA'-WA'R,

Chiefs and Rs. 5,200 on repairs of buildings from Imperial or Local Funds:-

	Rs.
Junágad	3,59,000
Bhávnagar	26,70,900
Navánagar	1,50,000
Morvi	2,70,700
Gondal	12,11,000
Vánkáner	18,100
Wadhwán	16,700
Porbandar	24,100
Bántva	25,400
Manavadar	57,500
Pálitána	22,000
Vála	38,100
Láthi	30,800
Chúda	10,300
Other Chiefs	91,200
	49.39.300

49,39,300

Buildings.

The city of Junágad will soon be completely transformed by the handsome buildings which are everywhere springing up and by the care and taste displayed in the formation of gardens in the suburbs. The handsome high school has just been opened and a jail is being built. Besides over Rs. 23 lákhs paid in the year for the railway, the State of Bhávnagar has spent a further sum of Rs. 3 lakes on public works. The hospital when finished will be a most striking feature of the town from its commanding position and great architectural ments. It is estimated to cost 5 lakhs and will be completed in the next year. The Thákor of Limbdi, who has been in England and appreciates the refinements of civilised life. has been much occupied in superintending the extension and decoration of his palace. The Thákor of Wadhwán is also employed upon his palace. The Jám of Navánagar spent 1½ lákhs in repairing the damages done to the State roads by the cyclone, including Rs. 40,000 on repairs to public buildings in the town. The Thakor of Morvi is busily engaged improving his palace, which he has lighted by electricity. The main road has been widened and a vegetable market erected in it which was opened by His Excellency the Governor. A handsome bridge over the Machu to connect Morvi with Wadhwan is being built, Rs. 68,400 was spent on it, and it is expected it will be opened in two years' time. He appears to think that traffic will be diverted from his port of Wawania to the railway at Wadhwan and is doing his utmost to make good roads to that station in anticipation of the change. The Thákor of Pálitána pays much attention to irrigation; he is now constructing a large tank under the Shetrunja Hill and has already derived much advantage from the Rajaival dam. In Jasdan also about Rs. 6,000 was spent in irrigational projects which the Chief is sanguine will pay woll.

Post Offices. Horse-brecding.

There are 105 post offices and 155 letter-boxes in the States.

There are 12 stallions in the province and the department has been transferred to the management of the General Superintendent of Horse-breeding Operations. The Thákor of Bháynagar

KA'THIA'-

Tribute.

has made a large paddock in which the colts can develop bone and muscle. No results have been attained as yet by the donkey stallions in Bhávnagar and Gondal.

The tribute of Rs. 11,31,600 was collected on account of Government, the Gáckwár and the Nawáb of Junágad; nearly Rs. 41,000 was outstanding, which has been mostly recovered since the close of the year. ...

The disputes between the Thákor Sháeb of Pálitána and the Pilgrim Tax. Shravaks of Ahmedabad regarding the levy of a tax on pilgrims visiting the Shetrunja Hill have been brought to a conclusion by the orders of Government that pilgrims, with some few specified exceptions, should be called upon to pay Rs. 2 each before ascending the hill. It became evident that the enumeration, which was being conducted by Agency officials with the view of ascertaining the average number of yearly pilgrims, was rendered abortive by the tactics of the Ahmedabad Shrávaks, whose influence was sufficient to arrest the flow of pilgrims in the direction of Pálitána during the continuance of the enumeration. This fact having been established, the only possible alternative was adopted, viz., that the tax should be levied individually. The Political Agent used his best efforts to persuade the Shrávaks to offer such a lump sum annually, in perpetuity, to the Chief as might induce him to forego his right to the personal levy, but without any effect; and, on the 1st December last, a notice was published that, commencing from the 1st January following, all pilgrims visiting the hill would be required to pay a tax of Rs. 2. Directly this notice was issued, pilgrims flocked from all directions towards Pálitána, and, during the month of December alone, more than 32,000 visited the shrines. As the price of conveyance and of all the necessaries of life was much enhanced by this enormous concourse, and only 17,000 pilgrims had visited the hill during the previous twenty months, it is evident that they were acting under orders, and that the fact of paying Rs. 2 per head for their tickets after the commencement of the new year was of minor importance as compared with carrying out the orders of their directors.

The arrangements made by the railway authorities for the conveyance of this vast crowd and by the Pálitána authorities for the housing and feeding and conservancy of such an unexpected influx were admirable. There was not a single accident. There were no complaints of want of food, or accommodation, or detention on account of laxity in the issue of tickets, and finally there was no epidemic disease.

Since the new year commenced there has been a great falling off in the number of pilgrims as compared with the returns of last December. But the amount realised in the first three months of the year, viz., Rs. 7,247, shows that the lump sum of Rs. 10,000, previously paid, was much below the mark. Pilgrims now receive tickets on payment of Rs. 2 each; there are no complaints, and the business is conducted with the precision and method of an ordinary railway station.

Chap. I. POLITICAL.

KA'THIA'-WA'R. Stamps. Opium; The stamp revenue is small, Rs. 133 from general stamp and Rs. 8 from court-fees.

Government consented to allow the Chiefs 1rd instead of only 1th of the pass duty, in the expectation that they would loyally co-operate for the suppression of illicit traffic, and the Chiefs have accepted the terms.

Local Funds.

There are 15 funds accounted for by the Political Agent, such as the Road Fund, Infanticide Fund, Civil Station Fund, the Rájasthánik Court Fund, General Fund, Education Fund, &c., the receipts of several of which are rather large. The Education Fund receipts, for instance, are Rs. 1,65,800 and the cash balance Rs. 3,60,000.

Births and Deaths.

No particulars, but cholera appeared in Rájkot, Gondal, Morvi and other large towns in September, and when suppressed again re-appeared in the same localities; though not of a virulent type there was collectively considerable mortality.

Hospitals.

The number of hospitals and dispensaries is 56 in addition to the Civil Hospital at Rájkot. Particulars regarding attendance and results are not given.

Vaccination.

80,814 persons were primarily vaccinated and 1,709 re-vaccinated, or an increase of over 29 per cent. in total operations. The success was 92.93 per cent as compared with 90.59. The cost was Rs. 29,000 against Rs. 27,700. Small-pox was prevalent in many of the large towns, but did not assume the proportions of an epidemic.

Education.

Education is making good progress. There are 630 schools and 36,448 scholars. The average number of square miles to each school is 32.60. There is a very satisfactory increase in the number of schools both in fund and private schools, the net increase being 29 schools and 3,847 scholars. Not less satisfactory is the progress that has been made in the efficiency of the schools, 20 boys having passed the Matriculation Examination, while 146 boys and girls passed the highest standard examination in primary schools. The cost for inspection was Rs. 15,950. The progress in ten years is an increase in schools from 387 to 630 and of scholars from 19,500 to 36,400.

The Rájkumár College is separately noticed under the chapter on instruction.

The Girásia school at Wadhwan was opened on the 20th June 1881 with 12 boys and the number soon increased to 20, but then fell off owing to the prejudices of the parents. They yielded however to persuasion and the boys soon numbered 33, who have made good progress in their lessons and gymnastics and have learnt good manners. The Thákor of Limbdi has promised to provide the school with a good turret clock.

CAMBAY.

Area, 350 square miles; Population (1881), 86,073; Revenue, Rs. 3,82,000.

Except in the payment of a yearly tribute the Nawab of Cambay is almost uncontrolled in the management of his State which roughly resembles that in force in British territory.

CAMBAY.

Survey,

The proposed revenue survey has fallen through, and it has been represented to the Nawab that he should have the work carried out by his own agency. An attempt has been made to institute inquiries into alienations unauthorisedly made by farmers and others under the late rule, but not with much success, as it is necessary to proceed in this work with some tact and caution.

Justice,

Except one case of murder ro very heavy crime appears to have been committed. There was an unfortunate riot accompanied by murder. Some British subjects who cultivate land in Cambay alleged that they had paid their revenue; but as there were no accounts the Darbar wished them to attend for inquiry, and, on several of them declining to obey the summons, their crops and cattle were seized and two women were arrested and confined. This led to a riot in which the man was killed who took the women to the guard-house, and the rioters declare that the women were dishonoured. Three of the rioters have been sentenced to be hanged, five to be transported for life and the rest were punished with lesser penalties.

2,231 civil suits were decided, leaving 145 in arrears: 74 Civil Justice. appeals were heard and 73 remained on the file.

The municipal income is only Rs. 6,650, but the Darbar Municipality. spends further sums, the roads are watered and lighted and a fireengine is maintained.

There are 105 savárs and 911 foot, including police and reve-Military. nue peons, mostly undisciplined.

The rainfall was 47.20 inches, 18 inches in excess of last year; Weather and it fell unseasonably, but the bajri and wheat crops were fair ones.

Crops.

Prices were higher during the year, but labour was cheaper, owing to the abolition of veth or customary unpaid labour. Trade was brisker, but the special manufactures do not seem to have prospered very well. Carpets for which Cambay used to be famous are now rarely made, but its excellent pickles and chatnics are being brought into notice through Kemp & Co. of Bombay.

Prices.

Trade.

The channel has altered a little, and vessels can come on a high tide 500 feet nearer than before; but this is little gained and cargoes have still to be carried a long way from the ships to the custom-house. A light railway from A'nand to Cambay was suggested; but as the Baroda State will gain nothing by it, and Cambay is in debt, it is not likely to be carried out.

The Port.

Railway.

The fine Juma Masjid has been repaired and roads have been improved, the chief outlay being in the city of Cambay.

Revenue.

The probable revenue for the year was stated to be Rs. 3,82,000, a slight increase over last year's estimate. A system of stamp revenue similar to that of the British Government has been introduced with good results. 20 chests of opium are to be passed duty free into Cambay.

Debt.

The State debt has been largely reduced. It originally amounted to about five lakhs with interest at 12 per cent. This rate has been reduced to 6 per cent. and over two lakhs have been Chap. I. 26 POLITICAL.

CAMBAY.

repaid during the past two years without retrenching necessary expenditure or neglecting useful improvements.

Dispensary.

The dispensary has been placed in charge of a graduate of the Grant Medical College and effects much good. The average daily attendance has been 70. 1,543 children were vaccinated.

schools.

Education is progressing. The scholars have increased from 291 to 365, and it is proposed to divert the Scholarship Fund to provide a good school building. There are 34 indigenous schools for boys and 2 for girls.

REWA KA'NTHA.

Area, 4,792 square miles; Population, 543,452; Revenue about Rs. 18,00,000.

The Rewa Kántha Agency contains 6 large and States. Rájpipla is the most important, while Udepur, Báriya, Sunth, Lúnáváda aud Bálásinor are in the second class.

The State of Sunth was made over to its Chief in April on the completion of his minority and the happy occasion was celebrated in open Darbar. The Bhils on the frontier gave some trouble for some months and several raids and counter-raids were made between the villagers of Khedapa and Wagner. Matters assumed at one time a somewhat threatening aspect and the Political Agent had occasion to ask for the assistance of the Dohad Bhil Corps; but no collision occurred, and the Bhils have been temporarily pacified until their grievances are regularly inquired into.

Complaints of tyranny and oppression were made against the Rája of Rájpipla by discontented rayats, which appear to have some foundation, and measures have since been taken with a view to improve the position of affairs.

Jetsingji, the Rája of Chhota Udepur, died on the 7th July 1881, and was succeeded by his eldest son Motisingji who unfortunately has had no experience of administrative affairs. A joint administrator has been associated with him for three years to initiate him into the management, and considerable progress has been made in the settlement of disputed matters and reforms have been planned and partly carried out. The State is considerably in debt, but Rs. 62,500 were paid off during the year.

Native Political Assistant for Sankheda.

For the better administrative and direct supervision of the Sankheda Mevás, which comprises 348 villages, a Native Political Assistant was appointed with the powers of a Deputy Collector in the British districts, with civil powers in original suits beyond Rs. 3,000, and with appellate jurisdiction over the Thánádár's decisions.

Border Court.

A Border Court was held at Sunth for the disposal of cases between Bánswára, Kusalgad and Chilkari on the one hand and the Rewa Kántha States on the other. It was presided over by the Assistant Political Agents of the respective districts and during 11 days of the Session decided 101 cases, leaving 5 in arrears.

Boundary Disputes. 2 boundary disputes between the talukas of Narvadi and Palasni and the Gaekwar's territory were disposed of by the

Chap. I. POLITICAL.

Political Assistant. The survey of Palasni and Sindhiapura has been completed, and commenced in those of Ahva and Vohora.

REWA KA'NTHA. Survey. Tribute.

Rs. 2,24,724 was paid as tribute to the Baroda Government and Rs. 37,998 were remitted, leaving a balance due to Baroda of Rs. 1,00,775. The tribute collected on account of the British Government was Rs. 41,498, leaving a balance outstanding of Rs. 24,202.

Besides Chhota Udepur, which is under a joint administration, States under there were 18 States under the direct management of the Agency attachment. covering over 100 square miles. The cause of attachment is generally indebtedness or minority. The receipts amounted to Rs. 43,800 and the expenditure to Rs. 41,700. The management of the estates of the Thakor of Umeta within the Kaira Collectorate and the Rewa Kantha has been assumed by the Talukdari Settlement Officer under Act XXI. of 1861.

Police.

In the Mevasis and Vadi the police work is performed by the Contingent savárs, while a party of the Gujarát Bhil Corps guard the treasury and lock-up at Vádi.

Offences.

The total number of offences was 1,441 against 1,139, and the persons arrested 1,938 against 1,880. 71 per cent. of the persons arrested, were convicted. It is supposed that the increase in offences is nominal, as hitherto petty thefts were punished by village officers without the knowledge of higher authorities and not recorded, while they are now reported and registered. The number of heinous offences has declined. There were 15 murders against 23; 16 culpable homicides against 91; 61 robberies and dacoities against 73; 153 burglaries against 128, and 385 petty thefts against 263.

> Stolen Property.

The amount of stolen property, Rs. 51,700, has increased and is nearly double, while the recoveries, 22 per cent., are also worse than the previous year.

> Criminal Justice.

Out of 2,921 persons brought to trial in all courts against 2,653 in the preceding year, 1,729 or 59 per cent. were convicted against 55 per cent. in the preceding year, 16 died and 275 remained for trial. The Agency courts have had less work, owing to the management of certain large States having been entrusted to their respective Chiefs. 2 persons were hanged, 1 transported for life, 725 imprisoned, 16 whipped, and 985 fined.

Jarls.

There are 24 jails and lock-ups, and persons sentenced to long terms in the minor States are sent to the British jails at Godhra and Dohad. A new jail has been opened at Chhota Udepur, daily average confined was 303 and the cost was Rs. 13,590.

95 suits were decided and 42 suits remained in arrears. The Civil Justice. value of the suits filed was on the average Rs. 107 per suit, and the average duration was 2 months 9 days. There were no appeals and the 4 in arrears were disposed of.

Military.

The number of savárs attached to the Agency is 314, many of whom are deputed on police and postal duties in the States; 35 are kept at Godhra, where they are temporarily lodged in a dharmshála.

REWA KA'NTHA. Weather and Crops.

Chap. I.

POLITICAL.

The season was more favourable to wet than to dry crops. The heavy rains in July washed away or crushed the early sown maize and bájri, but was good for transplantation of rice and boota. Maize and bájri were resown during the break immediately following, and yielded a fair crop. The rainfall in October proved of much benefit to the later grown products of the province. The rainfall was 47 inches 88 cents, and may be regarded as heavy but propitious, and prices were, as a rule, cheaper. The condition of the people may now be said to have quite rallied from the shock of misery and wretchedness following the year of distress.

Model Farm.

A model farm is being established at Piplád in Báriya, where scientific farming is to be carried on and the breed of cattle and sheep to be improved; and as a good superintendent has been engaged, the scheme has every prospect of success.

Forests.

The forests in Báriya on the Panch Maháls side have been extensively denuded since the commencement of the railway line to Godhra, and, on this being brought to the notice of the Rája, he is considering the propriety of adopting a system of conservancy similar to that in the Panch Maháls.

Transit Duties. The Rája of Rájpipla has undertaken to reduce the transit duties to the scale laid down in 1854-55; there is a want of communication and not much through trade in this State. The reduction of transit duties in Báriya has greatly benefited the State, and the receipts have trebled in three years, rising from Rs. 8,000 to Rs. 17,000 and on the opening of the railway to Godhra a further development of traffic from Málwa and Márwár through this little State may be confidently expected.

Public Works.

The following sums were spent by the Native States on public works, chiefly on roads and repairs:—

	Rs.
Rájpipla	38,900
Bariya	7,900
Lúnáváda	7,500
Sunth	5,900
Bálásinor	13,006
Kadána	1,100
Sanjeli	800

Revenue.

Some of the States give particulars regarding their revenue and expenditure—

	Revenue	Expenditure.	
	$\mathbf{Rs.}$	Rs.	
Báriya	2,21,100	1,99,700	
Lúnáváda	1,76,400	1,43,200	
Sunth	1,24,900	88,900	

For the others the estimate of revenue only is obtainable.

The Mevási States have handed over the management of opium revenue to the Political Agent, while they receive a remission of duty on all opium consumed in their States.

Births and Deaths, There are no particulars of births and deaths, but there was no epidemic.

POLITICAL. REWA Ka'ntha, Dispensaries.

Chap. I.

There is a dispensary in each of the six large States which were maintained at a total cost of Rs. 10,900 and the daily attendance was 306. The attendance at Lúnáváda dispensary alone was 150. A passed assistant from the Grant Medical College has been appointed to the hospital at Chhota Udepur.

14,693 primary and 59 re-vaccinations were performed against Vaccinal 11.958 and 64 in 1880-81; 97 per cent. of the former were successful and 72 per cent. of the latter. The average number vaccinated by each vaccinator was 1,341 at'a cost of Re. 0-3-1 and the total cost of the establishment was Rs. 2,773.

Instruction.

There are 69 vernacular boys' schools and 5 girls' schools, but the progress appears slow in these backward districts. average attendance has risen in boys' schools from 2,806 in 1875 to 4,030, and in girls' schools from 95 to 194. 6 new schools were opened in Chhota Udepur. The expenditure was Rs. 19,691. It is proposed to establish a tálukdári school at Vajiria, the central State of the Sankheda Mevás, for the suitable education of young Thákors. The estimate is Rs. 10,000, towards which the Thakors have contributed according to their means and position.

NA'RUKOT.

Area, 143 square miles; Population (1881), 6,440; Revenue, Rs. 8,260.

The Naikdars have continued peaceful, and appear to be gradually abandoning their turbulent and predatory habits. Onehalf the revenue of this little State was granted to the British Government in 1839, which has been consistently spent within its borders, and the management of the State has continued with the Political Agent since 1837.

The land has not been surveyed, nor would it pay to incur the The land-tax is lovied on the plough or at certain fixed rates to which the people are accustomed.

Survey.

There are 38 foot and 3 mounted police. 26 offences were reported, which is only 4 per 1,000 of the population, and were Civil Justice. of a light nature: 41 persons were brought to trial, and all of them were convicted and sentenced to fines or imprisonment for less than six months. Only property worth Rs. 20 was stolen, of which Rs. 8 were recovered; 24 ordinary cases were tried by the Mahalkari and 2 cases by the Sessions Judge, in which the offenders did not belong to the district. There was one appeal, which was allowed. Crime has been steadily declining during the past four years.

Police and

There were only 3 persons in jail at Jámbughoda; 9 were sent to Godhra and the rest were flogged.

Prison.

There are no civil courts.

Civil Justice.

The rainfall was 54.82 inches against 37.22, and the excessive wet in July damaged the maize and bajri. Rice and pulse were good. The mahura flowers suffered by strong winds and wet. POLITICAL.

NA'RUKOT. Weather and Crops.

and the yield was middling. The price of food-grains with the exceptions of rice and gram rose 20 to 50 per cent.; this is partly attributable to the smaller yield and partly perhaps to the influence of the railway works in the vicinity of the State. The agriculture is very primitive, but agricultural stock has increased by 42 ploughs, 17 carts, 239 cows and bullocks, and 138 sheep and goats; although this increase has hardly affected the quantity of land under cultivation. •

Forest.

The revenue from forest has advanced to Rs. 937 against Rs. 500, leaving a net profit of Rs. 764.

Public Works.

Rs. 459 were spent, chiefly on repairs to roads and tracks.

Revenue.

The land-tax is levied on the plough or on a fixed scale in the case of Valras and Bantes, and the rates differ according to the status and condition of the farmer; Rs. 5,444 were collected during the year and only Rs. 15 were outstanding. The abkári yielded Rs. 198 and forest Rs. 764. The local funds revenue was Rs. 971, and is made of transit duties and miscellaneous items. All these items show an improvement. A shop for the retail sale of opium was established under the arrangements of 1878, and the annual consumption amounts to about 12 lbs.

Census. Births and Deaths.

No difficulty was experienced in taking the census. lation was found to be 6,440, which shows a small decrease upon the numbers 6,837 returned in 1872. There were 259 births and 114 deaths; the increase of 32 in the latter is probably due to the heavy rainfall and consequent mortality from damp and exposure.

Dispensary and Vaccination.

511 patients attended the dispensary at Jambughoda, of whom 382 recovered and 2 died. The cost was Rs. 533 against 519; 208 children were vaccinated against 23 in the previous year.

Schools.

The school at Jambughoda, the only one in the State, was maintained at a cost of Rs. 294; the average attendance was 42 out of 66 on the register.

SOUTHERN GUJARA'T.

BA'NSDA.

Area, 384 square miles; Population, 32,154; Revenue, Rs. 1,93,872.

SURAT AGENCY.

The Chief is a minor and is being educated at the Rájkumár College, from which, however, he was absent for several months owing to bad health and to his marriage with the daughter of the neighbouring Raja of Dharampor. The survey of the remaining 11 villages was finished, and this completes the survey of the whole State; the rates have been fixed so as to give a total somewhat lower than the sum obtained by the farm of these villages. The country borders on the Dangs, it is in great part covered with forest, and more than half the land is uncultivated. No particulars are given regarding the police or criminal and civil justice, but the people are described as poor and igno-

31

POLITICAL
907 acres was thrown out of cultive. BANSDA.

rant. A large net area of 5,907 acres was thrown out of cultivation, which is supposed to have some connection with the reforms connected with the sale of spirits. Rs. 30,851 was spent on public works, such as wells, roads, 2 schools and repairs. The revenue was Rs. 1,93,872 and the expenditure Rs. 1,77,939. The income from land and abkari has decreased, but this appears to be a temporary effect, and the expenditure is swelled by the expenses of the Chief's marriage. More has been spent upon education, and the attendance at the dispensary has declined.

DHARAMPOR.

Area, 800 square miles; Population, 10,115; Revenue, Rs. 2,50,000.

This forest State is administered by the Rája, and the only particulars given are that a preventive force was organised to prevent the smuggling of liquor pending the introduction of the British ábkári system, and that one school has been discontinued, while vaccination has made good progress.

SACHI'N.

Area, 42 square miles; Population, 18,154;
 Revenue, Rs. 1,93,249.

This State, which is intermixed with the Surat District, has been under management for cleven years, and has a balance to its credit exceeding a year's revenue. The Nawab and his brother attend the Rajkumar College, where they have made satisfactory progress.

The survey was commenced, but after a time the establishment had to be withdrawn for duty elsewhere, and the land required by the State is now paid for instead of taking it for nothing. There were 92 criminal and 308 civil suits, and the practice of allowing the police officers to compel the return of a woman to her husband on payment of a fee has been stopped.

The season was a good one, and rules have been made under which residents may purchase building sites and become owners of their houses. The whole of the land revenue was collected, although it is higher than what the survey assessment would amount to, and the toll on foot passengers across the Udhna bridge has been abolished. Court-fees are now taken in stamps. Mortgages of State lands, except to the State, are not recognised. and has caused a decrease in registration receipts. Taxes in kind, veras, have been abolished, and the 'mamuli', or contributions in kind made to the palace, have been commuted for cash pay-"These mamuli taxes fell on the poorest of all classes. and they had no voice in the valuation of the contributions delivered. As an instance of the sort of abuse that prevailed, I may mention that eight annas a month was allowed as the value of the labour of cutting up firewood for the palace. This devolved upon the Dheds of the different villages in turn. Among themselves they arranged that the village supplying the labour for the time being should receive from the other villages four rupees a month, showing that the official valuation was oneeighth of what it should have been."

SACHI'N.

The revenue was Rs. 1,93,249 and the expenditure Rs. 2,17,498, which includes Rs. 99,235 for public works, about half of which was deposited with the Executive Engineer at Surat for important works which are to be carried out by the Public Works Department.

The season has been healthy, and the attendance at the dispensary declined. 3 new schools were opened, making the total 11, and the number of scholars was 870. Higher rates used to be charged on children attending Sachín schools who belonged to the Surat District, and in the same way Sachín children paid higher for attending Surat schools, but the charges have now been equalized.

MARA'THA STATES.

THE KHA'NDESH DA'NGS.

Area, 3,840 square miles; Population, 60,270; Revenue, Rs. 2,917.

The Dángs consist of 16 petty States, mostly forest, ruled by Bhil Chieftains, among whom the Rája of Garvi is accorded a nominal superiority. They are placed under the control of the Collector of Khandesh to which district these States are adjacent. The Chief of Singpur, Bapu Padvi, assumed charge of his State on attaining his majority. He has been fairly educated and is moderately intelligent, and succeeds to a good balance in cash, owing to the economy practised in his minority. The Gowáli State has come under the management of the Political Agent since the death of Ramji, the uncle of the minor Chief; the latter has been sent to school at Dhulia and measures have been taken to free the State from debt. The death of Ratu Padvi, Chief of Kathi, gave the succession to Chandrasing, a youth of 16 years. The management was entrusted to his uncle, who has since become insane, and the Political Agent has therefore taken charge and Chandrasing has been sent to school.

In the Surgana State the chiefship descends in one line, while the descendants of the brother of the Chief have an equal share in the revenues and he has no authority over them. The young men have not been behaving well: one has absconded from school and the other has displayed vicious propensities.

The conduct of the Chiefs in general has been good, although various members of their families have been misbehaving and oppressing the Kunbi cultivators who inhabit their villages. Two of the Chiefs of Garvi have been tried on very serious charges: one was sentenced to imprisonment for seven years and the other to six months.

Petty criminal cases are settled by the Rájas and Náiks themselves, the punishments inflicted being chiefly fines in money and cattle. Only one case was tried by the Political Agent. Witch murders are still common, but in very few instances do the authorities obtain information in time to bring the murderers to justice.

THE Kha'ndesh DA'NGS.

The only information regarding land revenue is given with respect to the Chikhli State which is under direct management. The land revenue was Rs. 1,644, a decrease of Rs. 871, the ábkári produced Rs. 1,041 or an increase of Rs. 74, and under miscellaneous only Rs. 226 were recovered, owing chiefly to the total absence of catechu" Bhates". The forests of Chikhli, whichhave been carefully preserved for some years past, will probably yield a good revenue when again worked.

The Mevás Chiefs manage their own ábkári revenue. Dangs the farm of nine shops for 1882-83 was sold for Rs. 7,300.

Education is in a very backward state; in the whole Dángs not more than half a dozen persons can read or write.

JAWIIA'R.

Trea, 538 square miles; Population (1881), 48,556; Revenue, Rs. 1,92,400.

This little State lying in the north-east of Thana has maintained its independence for more than five centuries. An agreement has been made to procure the opium required for local consumption from the Brytish Government and to rotail it at a price not lower than the rate prevailing in British districts, and another agreement has been entered into in which both the Jawhar State and the British Government bind themselves to levy no duties whatever on the road made by the latter between Talowli and Dahanu.

The survey commenced in January 1881 has not made much progress bwing to sickness among the establishment caused by the unhealthiness of the climate, but it is proposed to add to the staff and bush on the work with more vigour.

The strongth of the police is 21 foot maintained at a cost of Rs. 172 amonth. They dealt with 77 offences, which is double the number in 1880-81, and arrested 115 persons, all of whom were seet for trial, and 107 were convicted and 7 released. Property worth Rs. 217 was stolen and Rs. 204 was recovered. which is very satisfactory.

Including the offences brought up by the police the 4 criminal courts tried 174 cases and left 2 in arrears. *They convicted 158 persons and released 82; 1 died and 7 romained under trial. There were 2 cases of murder, 1 dacoity, 1 culpable homicide, 3 of rape, and 41 offences against the A'bkari Act. Only 8 persons were sentenced to rigorous imprisonment for more than six months: the rest were imprisoned for less terms than that period or fined. There were 21 appeals in all, of which the original sentence was modified or reversed. 59 persons were sent to the Jawhar Jail. which was maintained at a cost of Rs. 536.

There are 2 civil courts in which 103 suits were filed, 96 were Civil Justice. disposed of, and 37 remained in arrears. The Rája decided no appeal. 41 documents were registered against 200 in the previous year; formerly all documents had to be registered, but since August 1880 the rule has been relaxed, and hence the decrease.

Political.

Survey.

Police.

Criminal Justice.

POLITICAL.

JAWHÁR. Rainfall.

The registered rainfall was 111 inches 16 cents against 119 inches 31 cents. The season was an average one, the yield of crops was favourable, and the prices of food-grains moderate.

Public Works.

Rs. 1,608 were spent on public works, chiefly in wells. road from Jawhar to Dahanu will soon be taken in hand, the Surva tank was being enlarged and a dam was being built near the town of Jawhar for the water-supply of the town.

Revenue.

The revenue from all sources was Rs. 1,92,480, an increase of The principal sources of increase were ábkári, Rs. 96,700. forest and interest. The first is nominal, but forests yielded Rs. 82,900, an increase of Rs. 43,800, which the Rája considers due to good management, but it is possible that the rapid increase is made at a sacrifice of future interests. The total exponditure was Rs. 1,51,200.

Births and Deaths.

There were 612 births and 744 deaths, the latter being nearly double the number in the previous year. 1,123 patients attended the dispensary, which is more and more appreciated. All the 2,050 cases of vaccination were successful.

Schools.

There are 6 schools with 287 scholars. One new State school and 2 private schools were opened. The cost was Rs. 1,388.

JANJIRA

Area, 325 square miles; Population (1881), 76,361; Revenue, Rs. 2,80,300.

Sidi Ahmed Khan left the Rajkumár College, where he has been educated, on attaining his nineteenth year, and was married on January 7th, 1882, to a princess of Savanur, who is reputed to have received a fair education. This is the first occasion on which a wife has been brought from a foreign family of equal rank, and the event has been of great interest and rejoicing among the Sardárs. It is a Janjira custom that the marriage ceremonics of the sons and daughters of Khánjádás and Sardárs shall take place simultaneously with that of the Nawab, and the State has to bear the expenses attendant on all such marriages. The expense on this occasion being carefully supervised, did not exceed Rs. 25,000.

The sub-divisions of Gowela and the Shrivardhan bagait have been placed under the revenue management of the mahalkaris of Mhasla and Shrivardhan whose pay has been placed on a proper footing and their establishment increased. Hitherto each State village was managed by a separate and ill-paid kárkún, but a reform has been made by dividing the 51 villages into 12 groups under a properly paid official. By this arrangement a saving of Rs. 100 has been made. The practice of "sawai", that is, of adding 25 per cent. of the arrears due by a defaulter to his account at the close of the year, has been abolished.

It has been decided to carry out a survey of the State lands, and operations will commence next fair season. The revenue is paid in kind, and payments to Sardárs are made in the same way; but it is thought that a system of cash payments might be more convenient and beneficial.

The strength of the police is 85 foot maintained at a cost of They are a smart well-set-up body of men, and their Rs. 8.112. uniform is neat and appropriate. The "dhoti" has been very sensibly retained for the clothing of their lower limbs in place of the trowsers work by our police in which a native seldom looks well or at his case.

Janjira. Police.

204 offences were reported to the police, who arrested 471 persons and sent 279 for trial. 142 of these were convicted and 137 discharged, that is, 30 per cent. of these arrested were convicted. There are four chief police officers in Habsan. Of these one is the State faujdar and three others are mahalkaris with police powers. The work done by the State faujdár shows to best advantage: the percentage of convictions obtained by him on those sent for trial is nearly 70 per cent. It should be mentioned on behalf of the mahalkaris, that they have heavy revenue and magisterial business to attend to, besides their police duties. A similar system was in force in this Presidency about forty years ago, but was abolished on the ground of the conflicting nature of police and magisterial duties, and a new police system formed.

> Stolen Property.

The property stolen was valued at Rs. 9,358, of which Rs. 8,023 were recovered or 86 per cent. against 28 of last year. A heavy dacoity was committed in November 1881 in Wadoli, and as nearly all the property carried off was recovered; it has helped to raise the percentage materially.

In all 329 offences against 519 came before the criminal courts and 9 cases remained in arrears. 688 persons were tried, of whom 176 were convicted and 492 released. This satisfactory result is not improbably connected with the low price of foodgrains. There were only, 2 important cases: one was a dacoity in a Bania's house at Wadoli and the other a case of forgery. Both cases were tried by the Political Agent, and resulted in the conviction of 19 out of 23 accused in the former case and of all the offenders in the latter.

72 persons were sentenced to imprisonment for less than six months and 80 were fined. The fines imposed amounted in all to Rs. 1,694, out of which Rs. 891 have been recovered. The balance is due to the offenders being unable to pay the fines.

Of the 2 appeals one was rejected and in the other the decision was reversed.

There is only one jail in the State situated on the main land to the north of the town of Murud. 95 prisoners were admitted during the year, and the daily average was 27 against 29. The cost was Rs. 1,719.

710 suits were filed during the year, 405 were disposed of Civil Justice. and 347 left in arrears; 54 appeals were presented to the Kárbhári and Assistant Political Agent, who disposed of 40 and left 48 in

Two material changes have been made in the administration of this branch: the introduction of limitation rules more or less in imitation of the Indian Limitation Act and the levy of courtfees on appeals presented to the Appellate Court of the Assistant

POLITICAL.

JANJIRA.

Political Agent. Consequent on the proposed introduction of the new limitation rules from the 1st of July 1882, the number of suits in original courts nearly doubled. Appellate work in both the courts was heavier this year than last.

Registration.

The number of documents registered during the year rose from 143 to 173 in the year under report with a total value of Rs. 44,123. The receipts from these were Rs. 1,134. There is · no special agency for this work.

Agriculture.

The rainfall registered was 83.74 inches. It was not very timely in the early part of the monsoon, and consequently early rice crops suffered. For the late crops, however, it was all that could be wished. The season was on the whole a good one. Locusts made their appearance in Mhaisla Táluka in November, and did some damage to varkas crops. Prices of agricultural produce ruled low.

Forest

. The Assistant Conservator of Forests, Kolába, demarcated about 14 villages in the Nandgaon Taluka, but the work now stands postponed till the commencement of the survey, the forest officers having experienced great difficulty in demarcating forest before the culturable land has been measured and boundary marks set up. The entire revenue from forests was Rs. 15,607 against Rs. 10,118 of the previous year and expenditure Rs. 8,941 as against Rs. 5,819.

The number of forest offences was 57, of which 40 were proved against 170 persons and 6 remained undisposed of at the end of the year. Petty offences are generally punished departmentally, only aggravated cases or habitual offenders being sent before magistrates. The chief offence is cultivation by dalhi, in which trees and brushwood are cut down and burnt in order that their ashes may manure the ground for coarse grain crops. With all , its extent of jungle there is comparatively a singular scarcity of game which was not the case a few years ago. Wild pigs are indeed numerous, but the chithal (spotted deer), sambhar and bekri are disappearing.

Manufacture.

There are no manufactures in Habsán.

Trade.

The total imports amounted to Rs. 49,195 and exports to Rs. 1,14,920. This standing alone would represent a loss to the State, but it is probable the difference was made up by important tions of bullion, in the form of coin, not noticed in the trade Murúd is the head-centre of the Habsan trade. monopolises nearly one-half of the entire amount. The Shrive than exports consist for the greater part of betel-nut, which is sively grown in the garden lands and is much sought size in foreign markets. The Mhasla trade is poor, but an impatter they be given to it by the construction of a cart-road, which is permit the Gowela produce to reach its market and bandler

Exports.

The fair harvests restored the rice trade which had here seriously affected in 1880-81. The exports of rice during the year were higher than those of 1879-80, but less than those of 1878-79 by some Rs. 18,000. The increase in freward is greater than ever, is in a measure due to the laputa

costly.

Chap. I. POLITICAL.

trimming of the teak jungles in several districts. One lakh and sixty thousand bundles of firewood were disposed of by the Forest Department alone from this source, the greater part of which was exported.

JANJIRA.

The imports of sugar and molasses for three years past have varied but little, but have now fallen to one-fourth the usual amount, and may partly be attributable to the recent introduction of sugar-cane cultivation in the Habsan. Cotton and woollen stuffs, judging from past returns, always fluctuate heavily.

Imports.

Mhasla, a road from Murúd to Salai Chauki, and a great many public drinking wells. The school-house at Mhasla is a wellbuilt and well-planned structure which would do credit to any Public Works Department. The road from Murúd to Salao Chauki opposite Revdanda is a work of great usefulness, especially during the monsoon when the Habsan is cut off from water communication. It has been cleared and levelled as far as the Kolába District frontier near Borlai, a distance of 14 miles. The portion between Murúd and Nándgaon, about 4 miles, has been bridged and completed throughout. It is 15 feet broad with a 2-feet ditch on either side. The rest of the road from Nandgaon is passable for carts in the fair season. The estimated cost of the completed portion was Rs. 2,088 per mile, but it has been done for Rs. 1,653 per mile. The hilly nature of the country and its heavy rainfall, necessitating the construction of a large number of masonry culverts for free irrigation of the rice lands

The new works carried out were: a new school-house at Public Works

The making of this road, the first in the country, has had a marked effect. There was hardly a single cart in the town of Murúd up to lately, and sinco traffic has become possible along the road for wheeled vehicles, the place is becoming rapidly stocked with them. In the bazar and round the mahal there be seen of an evening numbers of carts which have brought grain or other goods, and travellers find a great difference tween riding comfortably from Murud to Borlai and transping Listance on foot over the old rugged track.

where the road passes through them, renders the work somewhat

Post Office. Revenue.

The Imperial lines of post office continued to work satisfactorily. * The receipts of the public treasury, including cash and grain, were Rs. 2,80,393, chiefly derived from land revenue, ábkári, brosts and salt. This shows a decrease of Rs. 52,722 as comwith that of last year. The cause is the fall in the price main, the bulk of the land revenue being received in kind. the loss serious than would at first sight appear, a large

The state from the State treasury was Rs. 2,63,266 Expenditure.

gainst Hs. 2,74,995 of last year—the principal items of expen
days being inams, public works and the cost of the admini-

Census.

ensus of 1881 returns the population as 76,361: this gives in the population as 76,361: this gives a planty of nearly 235 per square mile. It is noteworthy that countries or nearly half the population, belong to unproductive,

POLITICAL.

Janjira.

if not parasitic, classes—a fact painfully suggestive of squandering of State revenues in the past.

Vital • Statistics.

From this year the system of keeping registers of births and deaths was introduced in the State. The result is that 1,511 births and 1,634 deaths have been registered this year, but the rigures are probably inaccurate.

Dispensary.

There is only one dispensary attached to the Residency in charge of an apothecary. The number of patients attending it rose from 1,281 last year to 1,585 in the present year, or nearly three times that of 1879. This rapid increase shows how beneficial the dispensary has proved and how it is appreciated by the country-people. The chief complaints were fever, diarrheea and cutaneous diseases. The cost of the dispensary was Rs. 1,280.

Sanitary.

Cholcra appeared in the rainy season and lasted till the end of October. The number of cases was 622, of which 375 proved fatal. Otherwise the general health was on the whole good.

Vaccination.

The operations performed were 2,110. The cause of the decrease is probably attributable to the prevalence of cholera in the State for three months.

Public Instruction.

Much attention has been bestowed on this branch of administration, and it is satisfactory to find that education is making rapid progress in the State. The number of schools rose from 14 last year to 22 this year, and the number of pupils on the registers has gone up from 752 to 1,221. The daily average attendance also is better in proportion than that of last year, viz., 804 as compared with 487. One more English class was opened at Shrivardhan. 2 girls' schools have been started, one at Murud and the other at Shrivardhan. The average attendance at these schools is 89. The cost of the department was Rs. 6,415. Of this, Rs. 2,643 was met from educational cess and the balance from the State treasury. That the value of education is appreciated by the people is shown by the fact that 46 private schools are in existence, attended by 356 pupils; and that the Mahomedans are not behind their Hindu fellow-subjects appears from their supporting nearly three times as many private schools as the former do, although outnumbered by five toone. They have also applied for assistance in opening a school for girls.

SA'VANTVA'DI.

Area, 900 square miles; Population (1881), 174,433; Revenue, Rs. 3,43,355.

The administration of this State has been in the hands of the British Government since 1869 owing to the minority of the Chief. The Sar-Desái is in charge of a tutor, and spent the greater part of the year at Mahábaleshvar and Poona and has greatly benefited by the change. Efforts are being made to interest him in the conduct of the public business which he will hereafter be called upon to transact.

Sürvey.

The area surveyed was 21,943 acres and the area classed was 27,654 acres at a cost of Rs. 31,377, the total outlay on the work from its commencement being Rs. 3,02,761. It is hoped that the

Chap. I. POLITICAL.

whole of the measurement work, except in the 24 villages belong. Savantvad. ing to the Desai of Parma, will shortly be finished, and there will then remain only a small amount of classification. The cost, though large, will probably be repaid, for in the one district alone, which has been settled, the gain is Rs. 22,000 a year.

The settlement of 32 villages of the Vadi Petha was sanction in November 1880 as an experimental measure for one year, but the rates have as yet only been introduced into 20 villages. The enhanced rates caused some dissatisfaction, and on further inquiry the Survey Commissioner, who personally inquired into the pressure of the rates, considered that modifications might properly be made.

There were 24 wards' estates under direct management during The estate of the year. Of these 4 only are of any importance. · Subhanrav Pátankar is reported to be inextricably involved to the extent of Rs. 43,100.

Wards' Estates.

The number of men employed on police duty was 155 at a cost Strength and of Rs. 28,661. The offences reported were 778, and the police arrested 780 persons and sent 649 to trial, 330 of whom were convicted and 315 released. This gives 42 per cent. as the success of the police.

Cost of Police

The value of the property said to have been stolen was Rs. 5,507, of which Rs. 2,737 was recovered, a percentage of 49 against 37 in the preceding year.

Property stolen.

535 cases were tried by the criminal courts in which 481 persons were convicted and 503 were released, that is, 49 per cent. were convicted. 24 persons were sentenced to imprisonment for six months and upwards, 135 to imprisonment for less than six months, 308 were fined, 14 were whipped, 2 were bound over for good behaviour and 4 were condemned to death. The fines inflicted amounted to Rs. 2,877 and the recoveries to Rs. 2,136.

Work done by the Courts. Punishment.

With the exception of 3 cases of murder the nature of crime was not serious. More crime is observable under the head of hurts and offences against A'bkári and Village Police Acts.

Nature of Offences.

27 appeals from the decision of the Subordinate Magistrates were registered; the sentence in one case was reversed and in one the sentence was enhanced. There were 2 appeals against the decisions of the Political Superintendent, and the conviction and sentence in one was reversed by the Commissioner, Southern Division. 143 prisoners were admitted into jail, there was no escape, and the total cost amounted to Rs. 7,204 against Rs. 9,011.

Appeals.

Prisons.

The total number of suits filed in the three civil courts during the year was 1,945 against 2,351. Of these 1,366 or nearly two-*thirds were small causes. The number of suits disposed of was 1,951 against 2,413, leaving a balance of 349 for disposal. value of suits filed during the year was Rs. 76,405 against Rs. 1,01,338. The average duration of suits was 1 month and 11 days in the Judicial Assistant's Court of Small Causes, 8 months and 9 days in the court of the Nyáyádhish, and 3 months and 28

days and 1 month and 13 days in the court of the Munsif, in long

and small causes respectively.

Suits filed and disposed of.

SÁVANTVÁDI. Appeals. The files of the Appellate Court had a balance of 12 cases of the previous year. The number of appeals filed during the year was 132. Of the total number 127 were disposed of, leaving a balance of 17 at the end of the year. The average duration of appeals was 2 months and 13 days. Of the 127 appeals disposed of, the leaving of the lower courts in 55 cases were confirmed, in 8 amended and in 6 reversed, while 28 cases were remanded, 23 were compromised, 6 struck off and 1 referred to arbitration.

Special Appeals.

There were 49 special appeals for disposal during the year. Reports were submitted on 42 appeals, of which 38 were disposed of by Government, confirming the decrees of the lower Appellate Court in 37 cases and reversing the finding in one. Of the remaining 4, 1 was amicably settled and 3 were pending.

Receipts and Expendi ture of Civil Courts. The total receipts of the civil courts from all sources amounted to Rs. 13,875 and the expenditure to Rs. 14,038. The deficit of Rs. 162 was owing to decrease in stamp receipts, which resulted from the falling off in the value of suits filed.

Registration.

The number of documents registered was 1,918 against 2,953. The not receipts fell from Rs. 6,666 in the previous year to Rs. 3,885.

Municipality.

In accordance with the views expressed by Government the municipal committee in the town of Vádi resolved to exempt certain articles from octroi duty, and sanctioned the imposition of a tax on piece-goods, country cloth and metals. These changes were to be enforced from the 1st April 1882. The municipality have also introduced improved sanitary arrangements. The income of the municipality amounted to Rs. 4,293 and the expenditure to Rs. 5,250, chiefly on roads and repairs. It has been decided to collect the octroi departmentally.

Sávant vádi Local Corpa. The Local Corps maintains its efficiency, and Government have been pleased to sanction a moderate scale of retiring pensions to the men of the corps,—a privilege which they have not hitherto enjoyed. The cost of the corps amounted to Rs. 48,409.

Agriculture.

The area under cultivation was less than in the previous year, as the cheapness of grain threw inferior land out of cultivation, and it is said that cultivators found it more profitable to take work on the railways now in progress.

Coffce Estates, The net income of the coffee plantations at Tamboli and Nanyache Pani together was Rs. 197 against Rs. 4 in the preceding year. The produce of coffee and black pepper was encouraging, and with economy it is expected that still better results will be shown hereafter. The shoots of the "Musa textilis" procured from Madras have grown well, and experiments in extracting fibre from them will be made this year. The experiments made in cultivating "Sorghum saccharatum" and "Planter's friend" have not been successful, but further experiments will be made.

Musa Textilis and Sorghum Saccharatum,

Weather and Crops.

Prices of Food-grains. The harvest was very good, the outturn both of rice and hill crops being above the average. Locusts again appeared in the State in November and did much damage to garden trees. The rainfall, 129 inches, was seasonable. The average prices of rice

Chap. I. P OLITICAL.

and náchni wore 31 pounds and 62 pounds against 22 pounds and SA'VANTVADI. 41 pounds per rupee respectively in the previous year. has not been so cheap for many years.

The total area of land selected for forest purposes up to the end of March 1882 was 56,662 acres, nearly half of which has been demarcated. The net income of this department amounted to Rs. 5,237. Two more timber depôts were opened during the year, and the working of all of them was successful. The stools • of teak trees cut in the previous year have thrown out 4,000 healthy shoots, which seem to thrive better than the trees raised from seedlings.

Forests,

The State pottery made fair progress. At present the work Manufactures is confined to the manufacture of tiles, which compares favourably with those made at Mangalore, but the manufacture does not appear to be profitable. Specimens of lacquered wood-work, inlaid cocoanut and kuskus articles made in Sávantvádi were sent to the Calcutta Exhibition, which led to an increase in the demand for these articles.

The total expenditure incurred on public works amounted to Public Works Rs. 1,18,755 against Rs. 1,12,911 in the previous year. Some of the principal works completed are the bungalow for the Sar-Desái at A'mboli, the huzúr kacheri bungalow at Sávantvádi, the façade to the public office square with clock tower, a house for the medical officer at Vádi, police chaukis and school-houses. The new jail and the new Darbar hall were in progress, and improvements were made to the Sar-Desái's palace and the Bánda Kamávisdár's kacheri. The Sávantvádi and Phondághát and other roads were provided with bridges and culverts at places, and improved by cuttings, metalling and embankments. In the way of water-supply a bund and sluice-gates to the Pát tank were completed. The reservoir in the town of Vádi were also improved. Accommodation for travellers was provided on the Goa frontier, and the travellers' bungalow at A'mboli was improved by additions and alterations.

The revenue for the year was Rs. 3,09,800, about Rs. 12,400 less than last year; but this decrease is more apparent than real, as the compensation for the closing of salt works was not received until after the close of the year. The real decrease was under the heads of "Stamps" and "Registration". On the whole, however, the ordinary receipts are gradually increasing. The land revenue was Rs. 2,18,100 and the sayar Rs. 43,200, or Rs. 9,400 less. The expenditure was Rs. 3,73,700, of which no less than Rs. 74,500 was spent on public works and Rs. 31,300 on the survey. The Savantvadi Local Corps cost Rs. 48,400, and the allowances to inamdars and hakdars appropriated Rs. 30,300.

Receipts and Expenditure.

The receipts on account of local funds amounted to Rs. 33,555 Local Funds. and the expenditure to Rs. 43,535. By an arrangement made during the year the schools at Vádi, Kudál and Bánda, which had been hitherto maintained by the State, were transferred to these funds, the State paying an annual contribution of Rs. 8,000.

The receipts from tolls were Rs. 12,005 on the Amboli Ghát and Rs. 735 on the old ghát.

SA'VANTVÁDI.

Opium and
Excise.

The British ábkári system lately introduced into the State has worked well. The tree-tax has been increased to Rs. 3, which was intermediate between the tax of Rs. 4 in force at Ratnágiri and Re. 1 at Goa, and this graduated rate has proved sufficient to prevent smuggling. It is expected that the rate at Goa icreased and will afford an additional security against smuggling. The higher rate of tree-tax has brought an additional revenue of Rs. 1,049. Farms for the manufacture and sale of country liquor were sold for Rs. 15,222 and the amount of tapping tax was Rs. 11,337, making a total of Rs. 26,559 against Rs. 25,510 in 1880-81. The number of trees tapped increased from 3,474 to 3,779 and the number of stills from 164 to 176, the number of liquor shops being the same as in the previous year. There were 46 cases against the A'bkári Act, and the number of persons convicted for breach of this law was 59. Hitherto opium has been procured from the British treasury at Vengurla, but at the end of the year it was arranged that it should be purchased from the Commissioner of Customs for sale in the Savantvádi State. The use of opium is very limited in this State. .

Money Orders. The money order system is becoming more popular. The total amount of money order transactions was Rs 74,639 against Rs. 50,166 in 1880-81, the average for the previous five years being Rs. 26,936.

Census,

According to the census of 1881 the population of the State was 174,433, or 16,381 less than the figures of 1872, a decrease of 8.58 per cent. Bráhmans have decreased 3.37 per cent. and Shudras 9.42 per cent.

Births and Deaths. The total number of births was 4,338 against 2,824, and that of deaths was 4,982 against 4,444 3,645 deaths were caused by malarious fever.

Dispensary.

The number of patients treated at the Sávantvádi hospital was 7,222, or 494 more than in the previous year. Of these 2,724 were fever cases. There was no case of cholera or small-pox during the year. The daily average number of patients was 111. The general health of the people of the town of Vádi was good, which the medical officer attributes to the cheapness of the necessaries of life and the sanitary improvements carried out by the municipality.

Dispensaries at A'mboli and Kudál. A small dispensary was opened as usual at A'mboli during the hot season, where 343 patients were treated. The dispensary at Kudál, sanctioned experimentally for one year, was opened in February. The daily average attendance was about 50.

Vaccination.

The total number of vaccine operations during the year was 5,606, of which 4,990 were primary and 616 re-vaccinations, or 698 operations more than in 1880-81. With the exception of 411 all the operations were successful. The total cost of the medical and vaccination establishments amounted to Rs 7,824.

Cost.

Education.

There were altogether 46 schools at the close of the year, or 3 more than in 1880-81. Of these 1 is Anglo-Vernacular, 41 Maráthi, 2 Hindustáni, and 1 a Maráthi and Hindustáni girls' school. The total number of pupils under instruction in several

Chap. I. POLITICAL.

schools was 2,606 against 2,252, and the daily average attendance Savantvabi. was 1.767 against 1.483 in the previous year. The English or Anglo-Vernacular school was again successful this year in passing 2 pupils at the Matriculation Examination. The school was provided with a drawing-master and chemical apparatus during the year. An attempt is being made to popularise among the cultivating classes by a reduction in the rate of fees for the sons of actual cultivators. The girls' school made fair progress under the management of a committee, although the attendance fell off slightly. During the year the schools in the towns of Vádi, Kudál and Bánda were transferred to local funds, from which all the State schools are now maintained. The total expenditure on education was Rs. 19,626.

The library at Sávantvádi has 57 subscribers, the income was Rs. 600 and expenditure Rs. 651.

Sávantvádi Library.

SATARA FEUDATORIES

The States of Bhor, Phaltan, Aundh, Jath and Daphlapur are under the Political Agent, Sátára, and divide Sátárá from Poona and Shqlapur.

> Area, 1,491 square miles; Population (1881), 145,872; Revenue, Rs. 5,31,200.

The State is administered by the Chief, who in all that comes before himself energetically performs his duty.

The survey has been carried on since 1875 and the Sudhágad Táluka has been completed. Work is now being done in the Prachandgad Táluka, and during the year the department measured 15,990 acres of land and classed 33,318 acres.

The police force consists of 165 foot and 11 mounted men. maintained at a cost of Rs. 11,861, and there is a body of 30 savárs who form the Chief's body-guard. The offences reported were 613, and the police arrested 548 persons, of whom 462 were sent for trial, 118 of them were convicted and 423 released, the success of the police being only, 21 per cent. The value of the property stolen was Rs. 6,317, of which Rs. 3,428 was recovered, or 54 per cent. against 40 last year.

The six criminal courts decided 473 cases, 21 stood over, and only 176 persons were convicted out of 972 persons. The serious crimes were 2 of murder, 2 culpable homicide, 6 of robbery and 1 of house-breaking, besides 4 cases of cattle-lifting and 45 of setting houses on fire. Crime has slightly decreased. 42 appeals were made to the Chief, who reversed the decisions in 34 cases, modified 5 and confirmed only 3. There is an excellent prison at Bhor. 138 prisoners were admitted into jail, where the daily average was 19. The cost of maintenance was Rs. 2,946. The prisoners were employed in the jail work and on the town

1,529 suits were disposed of by the three civil courts, of which Civil Justice. no less than 986 were dismissed ex parte, 236 cases remained in

Police.

Chap. I. A

Sátára Feudatories. arrears, 1,395 cases were for sums under Rs. 100 and only 3 for sums above Rs. 1,000. The Chief heard and decided 74 appeals and left only 3 in arrears. 326 documents were registered.

Municipalities.

A committee of 5 officers superintends the conservancy and improvements in the town of Bhor. Rs. 1,904 was spent, of which Rs. 880 was laid out on a dam and pipes for the water-supply of the town. A privy tax and sweeping tax were imposed, and the proceeds were Rs. 340. The town looks cheerful, prosperous and clean, and the water-supply seems to be ample.

Weather and Crops. The rainfall was 57 inches, but as part of the country is on the ghats and part in the Konkan the distribution is irregular. The early crops failed, owing to want of rain, but the late crops were very productive.

Forests.

Forest demarcation has been pushed on in most parts of the State. In Sudhagad 45,664 acres were selected, but with a small exception the major part is still open to the cultivators to collect leaves and grass for burning in their fields. 12,207 acres were selected in the Nira valley and 581 acres in the Musa valley, and the lands of 23 villages in the Musa and Mutha valleys have been examined and selected for forest. The forest receipts were Rs. 10,000 and the expenditure was Rs. 5,400.

Revenue.

The revenue was Rs. 5,31,200 and the expenditure Rs. 5,01,900. The fand revenue yielded Rs. 3,10,000 and the sayar Rs. 1,06,700. The Chief has been permitted to continue the levy of customs duties or condition that they do not degenerate into transit duties. For local funds Rs. 18,900 was collected. Rs. 5,882 was spent on roads and Rs. 1,018 on dharmshálas. The expenditure on public works is small when compared with the receipts from local funds. Rs. 2,021 were spent on a new school, which is estimated to cost Rs. 12,000.

Public Works

The land to be covered by the Bhatgar reservoir in this State is being acquired by Government and will cover portions of 30 villages. Compensation is being settled and paid by a special officer. The Chief writes:—"It would not be out of place to mention here that the means of subsistence of about 6,000 people in my district have been sacrificed to the Bhatgar project. They are, I believe, on the eve of being reduced to the most deplorable condition. I intended to provide them with the lands lying waste in my territory for cultivation. Though the money has been paid to them as a compensation for their lands, yet I entreat the British Government on the part of my rayats to make over to them some lands which may be lying uncultivated in their district, and to observe leniency in reserving their barren These lands lands (not included in the reservoir) for forests. would enable them to maintain themselves partly. the policy of the Paramount Power in selecting lands for forests is profitable to this State, yet it is a very painful thing to see so many people deprived of their means of livelihood."

Vital

The number of births is reported as 1,989 and deaths as 1,593. 992 persons attended the dispensary, of whom 979 were cured. The cost was Rs. 889. 1,514 children were vaccinated.

Chap. I. POLITICAL.

The number of schools is 26 and new schools were opened at two places. Most of the schools have been inspected by the Educational Department, and 16 schools were reported on favourably. 60 girls attended the two girls' schools and village schools. In all there were 786 scholars, and the cost was Rs. 4,942.

SÁTÁRA FEUDATORIES. Education.

PHALTAN.

Area, 397 square miles; Population (1881), 58,382; Revenue, Rs. 2,98,300.

The Chief or Nimbalkar is very much involved. He has applied to be relieved of the management of his State in order that arrangements may be made to pay off his debts, and the Government of India have sanctioned the raising of a loan of 21 lakhs for this purpose.

No offences of a serious nature were committed; 21 prisoners were sent to jail, where the daily average was 16 maintained at a cost of Rs. 426. The strength of the police is 58, the cost Rs. 2,810, and the success achieved in their working 36 per cent. of persons convicted to those arrested. Property stolen was estimated at Rs. 1,107, of which 86 per cent. was recovered.

Crime.

The three civil courts disposed of 811 suits and left 581 in ar- Civil Courts. rears. Appeals lie to the Nimbalkar, who heard 35 and left a balance of 31 undecided.

208 documents were registered.

The town of Phaltan is a municipality with an income of Municipality. Rs. 1,447, while the expenditure was Rs. 3,140, said to have been met from the opening balance.

The rainfall was 18 inches 19 cents; the early rain was scanty Weather and and the kharif crop failed, but the rabi was fair.

Rs. 5,479 was spent on buildings and repairs.

The income from land and sayar realised Rs. 2,98,300, and Rs. 57,500 was obtained from miscellaneous sources. Rs. 90,000 was paid for debts, Rs. 74,800 represent alienations and service payments to patels, Rs. 61,000 was spont on the private expenses of the Chief and Rs. 14,800 was paid to Government on account of savárs. The local fund brought in Rs. 9,020, from which Rs. 5,400 was spent on a dharmshala and repairs and the rest chiefly on education.

Revenue.

The births reported number 1,584, and the deaths 864. The successful operations in vaccination were 1,313 and the unsuccessful 26.

Vital.

There are 17 schools with 703 scholars, and the cost of education was Rs. 2,982. The Chief says:—"The people of this State are ignorant and uncultivated. They do not appreciate the value of education. Their ignorance coupled with their poverty render the work of securing the attendance of their children a very difficult and painful task."

Schools.

SÁTÁRA FEUDATORIES.

AUNDH.

Area, 213 square miles; Population (1881), 58,941; Revenue, Rs. 3,13,000.

This State comprises a number of scattered villages in Satara.

The holds the title of Pant Prathinadhi, meaning "Representative of the Raja", and his chief town is not far from Satara.

He is a Brahman and said to be remarkable for his attention to the observances of his religion.

Survey.

The Atpádi Mahál has been surveyed and assessed, and it is hoped the survey rates will be introduced in 1882-83. About 5,000 acres of assessed land are lying waste in the State.

Police.

There are 54 stipendiary police and 170 shetsandi sepoys maintained at a cost of Rs. 7,783. Out of 172 persons arrested by the police, 70 were convicted and 93 acquitted, giving a success of 41 per cent. Out of Rs. 114 stolen, Rs. 96 was recovered, as the rakhváldárs and rámoshis are obliged to make good the loss. The magistrate at Rájáwádi was reduced as not necessary, and the remaining twelve criminal courts decided 230 cases and left 12 in arrears. 186 persons were convicted and 172 acquitted. Only 14 sentences were for a longer period than six months, and Rs. 1,201 was imposed as fines. There are 18 jails into which 139 prisoners were admitted; the cost was Rs. 2,981, including the new jail now building at Aundh.

Civil Justico.

There are six civil courts with Subordinate Judges of the Second Class. 445 suits were decided and 290 remained in arrears; 341 suits related to property less than Rs. 100 in value. The Chief heard 50 appeals and left 12 undecided, the average time occupied by each appeal being no less than 2½ years. Two appeals have been dragging on for 12 years—1 for 11 and another for 6 years. A Special Judge has been appointed to decide cases in which cultivators have mortgaged their lands to money-lenders, but particulars of his work have not been given.

Registration.

There is no separate establishment for registration; the work is done by the revenue officials who registered 211 documents.

The Pant maintains 301 armed followers.

The rainfall at Aundh was 15.20 inches.

Public Works

Rs. 6,301 was spent from local funds, chiefly on roads, tanks and wells. A good part of it was spent in Aundh itself. The Chief spent Rs. 1,700 on a travellers' bungalow and well from the State revenue. The local funds amount to Rs. 10,700 and the State revenue to Rs. 2,80,000, and the Political Agent thinks the Chief should spend more upon public works than he does.

Revenue.

The land revenue was Rs. 2,53,500 and the sayar Rs. 32,200. Allowances to hakdars and inaudars swallowed up Rs. 80,300, the Chief's personal expenses cost Rs. 56,800, Rs. 19,200 was paid for religious and charitable allowances and Rs. 20,000 for the payment of debt. The Chief levies fees on the sale of animals which sometimes amount to 50 per cent. of the value, possibly with a view to prevent cattle being taken out of his territory.

The number of births was 1,952 and deaths 1,173. There

native physicians are employed by the State and inedicines are

issued by them to the public at cost price. There is also a dispensary at Aundh in charge of a hospital assistant, where 1,941 patients were treated, 650 of whom came from British territory, 1.713 patients were cured. The cost was Rs. 609. 1,450 children

Chap. I. POLITICAL.

Sátára was an outbreak of cholera in the Atpadi Thana and Kundal. 3 FEUDATORIES.

·Vital.

were vaccinated. There are 18 boys' schools and 1 girls' school in the State attended by 723 scholars. 27 girls attend the girls' school. The cost of education was Rs. 3,402, and the donation to the library was Rs. 614. These payments are charged to local funds.

Education.

Area, 885 square miles; Population (1881), 49,478; Revenue, Rs 1,81,000.

The management of this State has been in the hands of Government since 1874 owing to mismangement. The land is poor and thinly populated and offers special facilities for cattle-breed-A sixth of the area is still uncultivated and the occupation of waste land is very gradual. The private landed property of the Jághírdár has also been under attachment, its affairs have been reduced to order, and a large number of taxes and cesses which the Chief was wont to collect through the agency of unscrupulous farmers have been abolished.

The strength of the police is 43 foot and 1 mounted men, and the cost was Rs. 2,870. It is said that the present remuneration is hardly enough to provide them with subsistence, paid, as most of them are, by lands held under condition of service. There were 166 offences reported, and the police arrested 51 persons, of whom 43 were sent for trial and 53 per cent. of these wore con-The value of property reported or stolen was only Rs. 1,082, but only 25 per cent. was recovered as against 70 per cent. last year. One case of child murder is the only serious crime of the year. Every year has been marked by dacoities, but not one occurred in 1881-82, although the eastern part of the country is wild and affords facilities for escape into the Nizám's Dominion.

Police.

50 cases were tried by the three magisterial courts, and in 28 of these the accused were convicted. 2 appeals were made, but both were rejected. Only 6 sentences of over six months' imprisonment were passed; the fines imposed amounted to Rs. 179, of which Rs. 135 was realised. 39 prisoners were sent to jail, where the daily average under confinement was only 10. The prisoners were employed on planting and watering trees and working in the jail garden. The cost of the jail was only Rs. 453.

Criminal Justice.

137 suits were disposed of by the Subordinate Judge, and Civil Justice. the average duration of a suit was 2 months and 10 days. The value of the suit in 126 cases was below Rs. 100. 56 suits remained in arrears. The Assistant Political Agent disposed of 9 appeals.

Chap. I. 48 POLITICAL.

Sátára Feudatories,

80 documents were registered, and the fees paid were Rs. 175.

There is no municipality in the State, but a beginning has been made in the town of Jath by the collection of a fund levied on sale of cattle at the weekly market. The receipts were Rs. 455,

d. P. 158 was expended, chiefly on a latrine and on conservancy. Lamps have been provided in the streets, a few trees planted, and masses of prickly-pear removed.

Weather and Crops.

The rainfall is reported to be 16½ inches. The early rain was insufficient, but the later rain was serviceable and the outturn of the cold-weather crop was very good. Prices were low, and at one time 120 lbs. of jowári could be bought for a rupee; but this was owing to the general plenty in neighbouring districts. Fodder for cattle was scarcer than usual, and the demand was enhanced by numbers of cattle being driven in from Sátára and Kolhápur where very little forage was obtainable. Labour has been plentiful and wages good.

Forest.

The hillsides are everywhere bare and wood is scarce throughout the State, but there are large tracts which might be enclosed for planting without reducing the grazing in any appreciable degree.

Public Works

For years nothing has been done for public works except the most necessary repairs, every available rupee including local funds being appropriated to pay off debt, the necessity of freeing the State from financial embarrassment being the all-important consideration. This has now been accomplished, and in the next year Rs. 20,000 will be available for roads in connection with the railway system which is now approaching the State. Two storage reservoirs are projected for purposes of irrigation.

Revenue.

The receipts amount to Rs. 1,81,100 and the expenditure to Rs. 1,92,000, showing a deficit of Rs. 10,900. The land revenue has yielded Rs. 1,63,500,—a large increase, which is owing to the adjustment of mams in State accounts within the year. The sayar revenue is Rs. 5,500, which shows a nominal decrease. The expenditure has increased owing to the payment of arrears to hereditary officers after a long examination of accounts. Rs. 58,900 was applied to the liquidation of debt.

The land revenue has been substantially increased by the operation of the Survey Department imposing quit-rents on inám lands and upon unauthorised additions to ináms, and besides this there is a steady improvement under this head. Rs. 5,617 was granted as remissions to pauper rayats and related to the arrears for famine years. For ábkári and salt the State receives a fixed payment in compensation annually, and it has been arranged that opium shall also be bought from Government depôts.

Debt.

The loan of Rs. 1,10,000 made to the State by the Government of India during the famine was paid off last year, and the Chief's personal debts have nearly all been settled. Rs. 54,900 was paid in 1881-82 and only Rs. 27,000 remained to be cleared off, most of which has since been paid. •The State liabilities are more complicated, but it is believed that the greater part are paper debts

Chap. I. POLITICAL.

SATARA '

which have long since been settled, and that the ultimate liability will be covered by Rs. 20,000. The whole debt at the close FEUDATORIES. of the year was therefore estimated at Rs. 47,000 against which there was a cash balance of Rs. 37,000, and a sum of Rs. 66,000 due to the State on account of arrears of revenue, most of which word filter will be recovered.

The Assistant Political Agent writes :-- "The State is now perfectly solvent. It has taken nine years to restore its finances, and during that period all progress has of course been suspended. Expenditure has been restrained in every department, and all means taken to develop sources of receipt with the one object of increasing the surplus to be paid away in liquidation of a crushing load of debt. In the five years which have elapsed since the famine a total sum of Rs. 3,20,000 has been devoted to this object. This total may in round numbers be distributed as follows:—Government of India loan, Rs. 1,25,000: Chief's debts, Rs. 1,35,000: internal liabilities, Rs. 60,000. The two latter classes of debts were mostly disposed of by compromise, and the sum of Rs. 1,95,000 paid away in settlement of the two together represents actual debts of at least three lakhs. The amount that has actually been settled is therefore about four and a quarter lakhs, and I have shown above that liquidation will be completed during the current year by the settlement of internal habilities to the extent of about Rs. 40,000 and Chief's debts to the extent of about Rs. 27,000. Adding these to the sum given above as representing debts already paid, we get a grand total not far short of five lákhs of rupees. This is the amount of the debt from which the State will, it is hoped, have been freed before the end of the current year."

1,952 births and 790 deaths were reported, but it is said the figures cannot be trusted. Cholera prevailed for a short time during the rains, but not of a severe type. There is no dispensary at present, but it is proposed to re-open one shortly. 1,693 children were vaccinated or double the average—1,443 successfully, 204 unsuccessfully, and the rest doubtful.

2 new schools were opened during the year, making the total number 14 with 607 scholars; the cost being Rs. 3,061. The progress is steady and the number of scholars is now greater than it has ever been.

Births and Deaths.

Schools.

DAPHLA'PUR.

Area, 40 square miles; Population (1881), 6,006; Revenue, Rs. 7,198.

This State consists only of six villages with a rent roll of Rs. 7,000, and is governed by a lady, the Bái Sáheb, who has prayed to be allowed to adopt an heir, but Government have negatived her request. Criminal trials are conducted in her presence; she has the powers of a magistrate, and appeals lie to the Political Agent. No appeals were made during the year. She is also invested with the powers of a Subordinate Judge and disposes of civil work in consultation with the State Munsif.

Chap. I. 50 POLITICAL.

Sátára Feudatories.

The Bái Sáheb has only Rs. 1,508 to spend on her private expenses, and Rs. 2,492 of the revenue go to the other two widows. The Political Agent considers the administration creditable to her. The villages have been surveyed, and it is expected that the survey rates will be introduced next year. The local fund revenue 325, of which Rs. 264 is spent on three schools which are attended by 56 scholars and Rs. 48 on vaccination. The total revenue was Rs. 7,198 and the expenditure Rs. 7,784.

AKALKOT.

Area, 498 square miles; Population (1881), 58,040; Revenue, Rs. 2,80,700.

This State not far from Sholapur is intersected by the G. I. P. Railway. The Chief is a minor of 15 years of age and is a student in the Rajaram College at Kolhapur. The management of the State has been in the hands of Government since 1866.

Crime.

Besides the regular police there are 194 shetsands who are paid partly in land and partly in cash, and are under the orders of the District Superintendent of Police. The property stolen was Rs. 4,761, of which Rs. 1,304 was recovered or 27 per cent. 255 offences were reported, including 2 robberies, 5 dacoities and 1 culpable homicide. 487 persons were tried, of whom 160 were convicted, 321 released, and 6 committed to the sessions. The Sessions Court tried 5 cases and convicted all 6 prisoners. There were no appeals. 169 prisoners were admitted to jail, and the cost was Rs, 3,724.

Civil Justice.

The civil courts disposed of 817 suits and left 46 in arrears. The value of the suits was Rs. 61,700 and the costs are said to be 12 to 16 per cent. 6 appeals were decided at an average cost of Rs. 37. 258 documents were registered.

A jamadar and 40 sepoys are entertained and employed to guard the treasury, the palace and jail. They are ill paid and are mostly in debt, and it is proposed to increase their pay.

Weather and Crops. The rainfall was 30.41 inches and the season was on the whole a good one. 5,272 acres were thrown up by cultivators during the year, but no special cause is assigned; yet it is said that the demand for land continues, although the value of the occupancy right is very low. If the figures are to be relied upon, agricultural stock has increased enormously during the year.

Forest.

In 42 villages lands have been selected and reserved for forest, and more land is being taken up.

PublicWorks.

Repairs were chiefly made during the year, but no new work of importance was carried out. A new post office is to be opened at Kurla.

Revenue.

The revenue was Rs. 2,80,700 and the expenditure Rs. 2,60,600. The land revenue was Rs. 1,83,700 and has fallen off; the sayar revenue, Rs. 46,200, has also declined; in other items there is a small increase. Under expenditure there is a payment of Rs. 34,900 for debt. The police cost Rs. 11,100, public works Rs. 7,300, education Rs. 5,000, and Rs. 13,900 was paid to Government in lieu of the Akalkot Contingent. 261 acres of alienated land were resumed.

The payment of Rs. 34,900 on account of debt due to Government, referred to above, closes the account. The State is now free from debt.

AKALKOT. Debt.

The census of 1881 returns the population as 58,040, which is a remarkable decrease from the number 81,068 recorded in 1872, and shows how severely the people must have suffered from the famine.

Census.

1,548 births were reported and 956 deaths; the births are very much in excess, and the deaths very much below the figures of 1880-81. In the dispensary at Akalkot 8,911 patients were treated at a cost of Rs. 2,037. There were 2,592 operations in vaccination, of which 2,413 were successful.

Vital.

There are 18 boys' schools and 1 girls' school with an average attendance of 640 scholars; the cost was Rs. 4,604. It has been decided to place these schools under the superintendence of the Government Educational Department.

Schools.

KOLHA'PUR.

Area, 2,778 square miles; Population (1881), 800,189; Revenue, Rs. 15,94,000.

The Chief is the son by adoption of Rája Rám who died at Florence in 1870. He was being carefully educated for his high position when attacked by an unfortunate malady, from which it was long anxiously hoped that he would eventually recover, but in January 1882 a committee of medical officers pronounced the malady to be incurable, and it then devolved upon Government to make provision for the administration. In March 1882 it was decided that the State shall be administered by a Regent assisted by a Council of three, the Diván, the Chief Judge and the Chief Revenue Officer. Public business will be carried on in the name of His Highness the Raja and in accordance with the traditions of the Kolhápur State, but new taxes will not be imposed without the sanction of Government. The Chief of Kágal, a feudatory of Kolhápur, was appointed Regent and was formally installed on the 16th March 1882 at a full Darbár in presence of the Ránis, several Chiefs of the Southern Marátha Country, and some of the high officers of State. The Political Agent presented the Regent to the assembly and advised him to promote the public interests and to serve His Highness the Maháraja with singleness of heart and honesty of purpose.

The administration had for some time been conducted by Ráo Bahádur M. W. Barvé, but the persistent animosity with which he was assailed by some of the Marátha papers and the charges brought against him in petitions directed to Government were such that it was decided he should proceed criminally against his traducers. The defence relied upon certain papers and letters which the jury declared to be forgeries, and the trials which were greatly prolonged finally ended in the conviction of several of the editors by the High Court at Bombay.

There are several feudatories subordinate to the Kolhápur State, of which four are important. The Chiefs of two of these States,

V ----

KOLHAPUR.

Vishálgad and Inchalkaranji, are minors, and their fiefs are managed by the Kolhápur Administration. The Chief of Bávda succeeded to his State clittle more than a year ago, and the Chief of Kágal is now the Regent of Kolhápur. Briefly the income and expenditure of these States may be given:—

e	,	Income. Rs.	Expenditure Rs.
Vishálgad		1,20,618	1,02,346
Inchalkaranji •		2,12,545	2,04,125
Kágal		1,75,617	1,75,937
Bávda		78,619	74,121

Survey.

The survey measurements were pushed forward in the Budhargad Táluka and in Bávda and the Agra Táluka of the Inchalkaranji State. Settlement rates were introduced into seven inám villages of the Kolhápur State, the financial result being an increase in the revenue demand of Rs. 2,339 or 15 per cent. In all 501 villages, have been settled with an increase to the revenue of Rs. 74,600.

Alienations.

For many years past an inquiry into alienations has been in progress which has excited some dissatisfaction and has been made the subject of attack in the Native Press. His Excellency the Governor personally inquired into the matter when at Kolhápur in March 1881, which resulted in the Political Agent submitting a memorandum on the progress of the inquiry since 1845, and subsequently Government, have approved of a proposal to apply a voluntary summary settlement to the holders of all alienated lands whose titles have not been adjudicated. The settlement will be extended to those only who apply for it, and will be brought into force in 1882-83. During the year, 931 cases were inquired into and decided, and allowances amounting to Rs. 4,472 were resumed. In the accounts the increased demand in 1880-81 on account of resumptions of alienations is put down as Rs. 34,400 and for resumption of excess land in alienated holdings Rs. 55,500.

Waste.

Since the famine large areas of land have been thrown out of cultivation, but the tide has now begun to turn, and during the year 16,300 acres of land were taken up.

The estates of 21 wards are under the management of the State. The receipts are usually under Rs. 5,000, but in two in-

stances they are more than Rs. 50,000.

The rules regarding the levy of court-fees have been simplified and codified, and as the ábkári management has been assimilated to that of the British Government it was found necessary to adopt the A'bkári Act (No. V. of 1878). The Opium Act was also introduced according to agreement.

Police.

The police force in Kolhápur and its feudatories numbers 658 foot maintained at a cost of Rs. 66,100. In Kolhápur proper the strength has been increased by 50 men and the pay has been raised from Rs. 5 and 6 to Rs. 6 and 8. A moderate scale of pensions has also been adopted to be given after twenty years' service. 1,641 persons were arrested by the police, 1,604 sent for trial and 958 convicted, which gives a success of 58 per cent. on arrests. The value of property stolen is put down at Rs. 35,800 and the value recovered at Rs. 24,900,—that is, 69 per cent. against 34 per cent. last year. 135 cases of fires caused intentionally were reported and

are said generally to be the result of village feuds and disputes about agricultural property.

KOLHA'PUR,

There are 38 criminal courts in which 3,473 persons were tried and 15 remained untried. 706 persons were convicted and 101 committed to the Sessions. Only 25 persons were in principled for more than 6 months and 1,111 were fined to the extent of Rs. 12,700. 84 appeals were decided and the sentences confirmed in 44 cases, reversed in 25, and modified in 15:-2 appeals were in The Court of Sessions tried 102 persons and convicted 67:-5 remained under trial. On the whole there has been a slight increase of crime, chiefly in housebreaking and theft, but a docrease in all heinous crimes.

Criminal Justice

There is 1 central criminal jail and 13 district jails in the State into which 1,170 persons were admitted, the daily average under imprisonment being 227. The cost per head in the central jail was Rs. 54, the prisoners having earned a net sum of Rs. 365; in the district jails the total cost was Rs. 1,316. In the central jail there is a night school attended by 8 persons.

In all there are 18 civil courts in which 3,241 suits were de- Civil Justice. cided and 707 remained in arrears. The value of suits decided was Rs. 2,73,300 and in 507 cases the disputed value was over Rs. 100. The Chief Judge decided 92 appeals and left 158 in arrears; this is due to the sickness and death of the late Chief Judge. Appeals used to lie to the Political Agent, but since the establishment of the Regency the Regent in Council is the final appellate authority. Before that date the Political Agent disposed of 28 appeals and left 27 undecided. An Assistant Judge has been appointed to assist the Chief Judge.

2.386 documents were registered, and the practice appears to be on the increase, as this number is 368 more than the average of 4 years. The greater number of the documents were mortgages and sales

Besides the municipality at Kolhápur there are three other town municipalities at Narsobachiwadi, Inchalkaranji and Kagal. In other large towns the cost of sanitation is defrayed by the State. The income in Kolhápur was Rs. 52,600, including a contribution made by the State. Town duties are levied on opium and gárjá, and there is a productive tax on the sale of cattle and sheep and a license fee on pan and tobacco. Rs. 18,500 was spent on public works, Rs. 10,200 on repairs, and the same sum on conservancy. A large sum was spent on a dharmshala and on new toll-houses. The gateway on the road leading to the palace has been pulled down to ease the traffic, and the ramparts will be demolished as funds permit and in anticipation of the water scheme, as provision has to be made for drainage. In other towns Rs. 6,330 was spent on municipal services.

The Kolhápur Infantry, a Local Corps 533 strong of all ranks, Local Corps. has maintained and increased its efficiency, as an adjutant has been appointed who has been able to devote hit all entirely to the training of the men. The Red Risála is a bidy of horse numbering 155 men.

KOLHÁPUR

The rainfall was 28.6 inches or 7 inches below the average and the crops were not sc.good as usual; but as the rabi was fair, the harvest on the whole was equal to the average. The cultivation of wheat, cotton and tobacco has extended, while that of gram and bajri has declined. The public garden was maintained at a cost The coffee plantation at Vishalgad is thriving, and the plants have grown 1½ feet in one year.

Forests.

In surveyed districts forest lands have been demarcated, but in unsurveyed districts the progress is necessarily slow. The Political Agent remarks:—

"The forests of Kolhápur have not received the attention their importance merited, and during my tour in the Azra and Bhúdhragad tálukas I was pained to see the destruction caused by kumri cultivation. In addition to this evil a very nice jungle near Shengaon, which had been preserved since the time of Bába Sáheb Mahárája, was spoilt by the rascality of a forest subordinate who without orders permitted the best of the timber to be cut down and sold for a mere song. In the Bávda and Vishálgad districts, forests of a respectable age and size still exist. Some of these are what are called evergreen forests, which should never be cut down. As a preliminary step I stopped all cutting within five miles' distance of the crest of the ghats and also prohibited the inhabitants of the Konkan coming into Kolhápur territory and carrying on their most wasteful kumri cultivation. At first we shall lose yearly two or three thousand rupees of revenue along the ghats, but in the end, with a vigorous system of replanting, the State must gain immensely. A more careful and departmental supervision over the collection of hirda nuts has resulted in an increased net profit of Rs. 29,262 as against Rs. 23,732 last year. Teak, ain, bamboos, the jack tree and the hirda will amply repay the trouble of rearing them; but the plantations of cashewnut tree will not, I fear, repay the money and labour bestowed upon them."

The department shows a profit of Rs. 11,800 on the year's working, and there is reason to hope that with careful conservation the forests will yield an increased revenue yearly.

Public Works.

The expenditure on public works was Rs. 7,67,900, a larger sum than has been spent in any of the past four years. The Native Library has been completed at a cost of Rs. 27,100, and the girls' The Kalamba school at Kolhápur at a cost of Rs. 34,900. storage tank is estimated to cost Rs. 1½ lákhs, of which nearly one-third has been spent. The Rankala tank is still unfinished, and the amount spent on it is Rs. 2,16,800. The palace was in progress and will cost Rs. 6½ lákhs before it is finished. The Prince of Wales' Hospital will cost Rs. 2,86,000. The Kolhápur and Amba road will cost Rs. 1,82,000, the approach to the Panchganga bridge Rs. 96,000 and the road from Kolhápur to Bhúdhargad Rs. 73,000. A bridge of five spans has been thrown over the Shuli near Malkapur and another is nearly completed, while the bridge over the Bhogavati on the Bavda road will cost Rs. 1,45,000. These and many other works are in progress, and there are few States whose public works will bear comparison with those of

Kolhápur. Nearly half its revenue has been applied to public Kolhápur. works during the year, and the Kalamba water works for the supply of Kolhápur, the new hospital, and the new palace are undertakings worthy of any State. The budget for the current year is framed on a more liberal scale than ever, upwards of 10 lakhs of rupees being allotted for the Public Works Department.

The finances of the State are in a flourishing condition. The accounts for Kolhápur proper for the year 1880-81 show a gross ' revenue of Rs. 21,18,486, including deposits, and a gross expenditure of Rs. 19,52,029, the surplus being Rs. 1,66,456. Although there was a decrease of revenue of Rs. 14,062 as compared with 1879-80, there was also a considerable decrease under expenditure, viz., Rs. 62,453. The surplus balances now amount to Rs. 32,17,710, of which Rs. 23,04,400 are invested in Government securities. The abkari has been farmed for three years, and already after ten months' trial it is anticipated that the net receipts in the first year will exceed the minimum guaranteed amount by Rs. 4,000. This result has been brought about by the vigilance and energetic measures of the contractor and his subordinates; and when the smuggling from Kurundvád has been checked, there will be a further increase to the revenue under this head. A very small quantity of opium is consumed in the State—only Rs 3,060 worth during the year.

The following is copied from the Political Agent's report:—

"Under the head of vital statistics and medical service it may be mentioned that an additional dispensary has been built in the districts, viz., at Gad Hinglaj, but still several others are required, e.g., at Azra, Katkol, Narsobachiwadi, and perhaps at Roybag. As soon as arrangements can be made, a dispensary will be opened at Gargoti in the large dharmshala there. The expenditure on the Medical Department amounted in round numbers to Rs. 23,000. The general health of the population in the town and districts was unusually good; but cholera showed itself about the end of August and did not leave till the end of June 1882. There was a sensible increase in the number of vaccinations compared with the figures of previous years. In 1869 Dr. Sinclair was specially chosen for his high character and tact in dealing with natives to fill the post of civil surgeon here, and since his arrival he has done much to popularise the use of European medicine among all classes; in a recent proposal to Government for the re-organisation of the Medical Department of the State the Regent in Council desires to retain Dr. Sinclair's valuable services.

"There are 154 schools in the Kolhápur State, exclusive of the Rájárám College, in which 9,191 men, boys and girls are taught. Including the college and high school the figures are respectively 155 and 9,519. There is a falling off in the amount of fees collected to the extent of nearly Rs. 2,000; but this is owing to three Sardárs having left. There are 20 young men on the college rolls: 4 passed the Previous Examination of the Bombay University. In the high school division 147 students have passed the Matriculation Examination up to date. 15 were matriculated this year, and one of them won the Sir LeGrand

Vital.

Schools.

KOLHA'PUR,

Jacob Scholarship in the Bombay University. 10 Sardárs attended the Rájkumár division against 13 last year. Since last November the Inija of Mudhol has left; the Nawab of Savanúr was absent nearly the whole of the year on account of the marriages of himself and his sister. Although he has re-joined lately I fear he will not remain long. The Mhysalkar will also be leaving shortly, so that the number will further be reduced to seven; and, unless the Agent for Sardárs in the Deccan at Poona cordially co-operates, I see no prospect of this important institution flourishing as was expected. During my tour I tried to induce some of the wealthy land-holders to have their boys educated at Kolhapur; and although the parents promised to consider my suggestions, no fresh pupils have joined this term. In the course of three or four years some half a dozen of the sons of Chiefs and Sardárs under this Agency will be old enough to join the school, but it is evident that, if the Rajkumar class is to prosper, the area from which it draws its recruits must be sensibly increased, and the sympathy and co-operation of the Satara and Poona Agencies secured. The results of primary education in this province are re-assuring. The demand for this description of schools is increasing yearly, and will be met partly by additional Government schools and also by subsidising the indigenous school-masters in the districts. The people of Kolhapur seem to be appreciating the efforts made to educate their girls, and 330 were on the rolls at the end of the year as against 280 last year. There is no doubt that female education has received some impetus in the town by the public distribution of tempting prizes and the opening of a handsome building for the accommodation of the girls. It is proposed to open a training class for schoolmistresses—a want keenly felt in the Southern Marátha Country generally. Miss Little's report on the progress made by Her Highness Anandibái Sáheb is most satisfactory Everything is done to induce Her Highness to acquire a variety of accomplishments, so that she may have as many resources as possible in her secluded palace life. I have had frequent opportunities of seeing and conversing with Her Highness, and was much struck with her intelligence and amiability. On a recent occasion she evinced more strength of character than could be expected in one so young. Her Highness undoubtedly owes a great deal to the affection and unceasing solicitude with which the Downger Ráni Her Highness Sakwarbái Sáheb has watched over her since her marriage. Her Highness Sakwarbái Sáhob has not given up her studies, and is an accomplished needle-woman. It is gratifying to add that their Highnesses the Ránis take an interest in the social and intellectual advancement of their subjects, and attended the opening of the girls' school and the distribution of prizes to boys and girls.

"I may mention that although His Excellency the Governor did not actually visit Kolhápur, he passed through some of its outlying districts, and at Mıraj some of the principal Sardárs of the State visited His Excellency. The projected Southern Marátha Country Railway, when made, will at Miraj pass within 32 miles of Kolhápur, and must prove a great boon to the State."

SOUTHERN MARA'THA STATES

Miraj (Senior). Miraj (Junior) Kurandvád (Senior) Kurandvád (Junior).

Jamkh-ádi. Mudicol. Rámdurg

Area, 1,837 square miles; Population, 523,753; Revenue, Rs. 14,75,694.

This group of seven States lies to the east of Kolhápur, and is in the charge of the Assistant Political Agent, Kolhapur. Except Rámdurg they were originally grants from the l'eshwa to the Patwardhan family on condition of military service. In January 1882 Mhaisal was transforred to the Sángli administration to which it is subservient. His Excellency the Governor visited Muraj, Kurandvád, Jamkhandi and Mudhol in November 1881. young Chief of Mudhol has been studying law preparatory to assuming charge of his State, the Chief of Miraj (Senior) is still at the Rajaram College and was married during the year, while the Chiefs of Miraj (Junior) and Ramdurg are little boys at home.

The survey is being introduced into Jamkhandi, Miraj (Junior) and Ramdurg. Kurandvad is still unsurveyed. In Ramdurg, where the survey rates are to be introduced very shortly, a good deal of land has been taken up in the hope that the new rates will be easy.

Survey.

The police force is 116 savárs and 822 foot, maintained at a cost of Rs. 87,128. The strength was increased by 25 men during the year. The police arrested 1,852 persons and sent up 1,573 for trial; 860 persons or 54 per cent. were convicted. The value of property stolen was Rs. 36,860, of which Rs. 17,398 was recovered, or 47 per cent.

Police

The number of offences decreased from 1,657 to 1,548, and the criminal courts convicted 1,096 persons, or 53 per cent. 56 persons remained under trial. The most serious crimes were 3 murders, 2 culpable homicides, 1 dacoity and 12 robberies. 48 appeals were presented and the sentences were reversed in 11 cases and modified in 7. There are 18 jails and lock-ups into which 348 prisoners were admitted; the daily average under confinement was 187, and the prisoners were generally employed on out-door work.

Criminal Court.

The civil courts decided 2,470 suits and left 512 in arrears. Civil Justice. The increase in litigation is supposed to be due to the proposed introduction of limitation rules. There is no registration in Kurandvád, and in the other States there is a marked decrease, the number of documents registered having fallen from 2,107 to 901.

There are 11 municipalities. Miraj, Jamkhandi and Lakshmeshvar have a population of more than 10,000 each; in the 8 others the population is about 4,000 each. Excluding Kurandvád these towns spent in all Rs. 23,800 on municipal improvements. Some of them are kept very clean, notably Lakshmeshvar, which the Deputy Sanitary Commissioner considers the cleanest town in his division.

Municipalities.

SOUTHERN
MARA'THA
STATES.
Public Works

The total sum spent on works of public utility by the different States was Rs. 1,50,801 against Rs. 1,21,106 last year. Rs. 46,886 were spert on roads, Rs. 12,252 on school-buildings, Rs. 20,370 on water-supply, Rs. 10,792 on accommodation for travellers, Rs. 40,08° on State buildings and private residences of Chiefs, Rs. 8,972 on road-side and other trees, and Rs. 11,557 on other works. Miraj takes the foremost place with Rs. 47,459: Miraj " (Junior) follows with Rs. 32,865. Jamkhandi comes next with Rs 29,466, of which more than Rs. 18,000 were spent on communications, which have till lately been somewhat backward. Mudhol as usual has done a great deal in the matter of roads, public buildings and tree-planting. Rámdurg, too, has been able, for the first year since it came under direct management, to spend Rs. 12,282 on works of public utility. This sum has been judiciously laid out. It is satisfactory to note that the Senior Chief of Kurandvad has laid out more than double the sum he did last year on public works.

Revenue and Finance. The income and expenditure of the different States are as follows:—

		State				e ir ending dy 1851
					Income	Expenditure
					Rs.	Rs.
Miraj (Senior)	•••				3,37,000	2,74,868
Miraj (Junior)		***	•••		1,78,071	1,39,274
Kurundvád (Se	nior)	•••			1,10,000	99,000
Kurandvád (Ju	nior)		i	•••	1,19,642	1,19,973
Jamkhándi					9,56,227	3,51,694
Mudhol		•••		•••	2,45,461	2.33,980
Rámdurg	• •	•		•••	1,27 293	1,11,960
			Tota	ıl	14,73,694	13,30,749

The financial position of the directly managed States of Miraj (Senior) and Mudhol is all that could be wished. The former State has Rs. 6,43,521 invested in Government securities besides a cash balance of Rs. 1,00,400. Mudhol is even better off, having, besides a cash balance of Rs. 51,319, a sum of Rs. 7,40,883 in Government securities. Rámdurg is now not only free from debt, but has an invested balance of Rs. 30,000.

The particulars of local funds, which only exist in two States, are given below:—

						,
					Income.	Expendi- ture
					Rs.	Rs.
Miraj (Senior)	••	•••	••	•••	30,1 2 8 17,025	26,134 15,352
Mudhel	•	•••	•••	•••	17,025	15,352
						<u> </u>

The expenditure was on Education and public works, chiefly roads, chaukis and dharmshálas.

Chap. I. POLITICAL.

The public health was generally very good, though cholera was prevalent towards the close of the year in the two Miraj States and Kurandvád (Senior). There was also an outbreak of cholera in the Jamkhandi State in October and November 1881. In all 127 persons died of the disease.

SOUTHEEN MARA'THA SIATES. Public Health.

The number of births registered was 9,229 and the number of deaths was 5,450.

Births and Deaths.

There are 6 dispensaries maintained at a cost of Rs. 17,600. Dispensaries. The increased attendance in all, but most marked in the case of Kurandvád and Rámdurg, shows the increasing popularity of these institutions. On the whole there has been a decrease in the cost.

The number of vaccinations was 9,581.

Vaccination.

9 new schools were opened, thus bringing the total number up to 102, consisting of 5 Anglo-vernacular schools, 7 girls' schools, 5 night schools and 85 vernacular schools. The number of pupils. has improved from 4,780 to 5,677, and the average monthly attendance from 3,623 to 4,237.

Schools and Scholars.

Of the three States which are managed by their own Chiefs, Jamkhandi is undoubtedly the best managed, and is making rapid progress in civilisation. Both the Kurandvád are still backward. The relations between the elder Chief of Kurandvad and his rayats are not quite satisfactory. In the Junior State, however, the people seem content with the rule of the Chief, which is just and mild.

SA'NGLI.

Area, 1,049 square miles; Population, 196,832; Revenue, Rs. 8,52,435.

The saranjám of Mhaisal, which had been removed from the control of the Chief in 1872 for mismanagement, has been restored, but the Chief is still associated with a Joint Administrator on the part of Government. His Excellency the Governor visited Sángli in November 1881. The Saranjámdár of Mhaisal is a student in the Rájárám College.

Considerable progress was made with alienation inquiries which will probably be brought to a close during the current year.

Alienation inquiries.

In spite of low prices cultivation increased, the area of assessed waste having decreased from 63,363 to 54,409 acres. In Mhaisal the waste was 622 acres.

Assessed Wasto.

The estates of four minors whose total income was only Rs. 5,100 were under management of the State authorities.

Wards' Estates.

The strength of the police of all grades was 480, of whom only 110 are armed with muskets There were also 50 mounted men. The number is 62 less than in the preceding year, due in part to vacancies not having been filled up and to 26 men, who are the Chief's private servants and paid from the privy purse, having been struck off the strength of the force. The cost of police was Rs. 51,805. There were 8 police sepays in Mhaisal.

Police.

780 persons were arrested and 718 sent for trial, of whom 373, or 51 per cent., were convicted. The value of property stolen was

Working of Police.

60

POLITICAL

SA'NGLI.

Rs. 18,063, of which Rs. 6,231, or 34 per cent., was recovered. Sángli borders on half a dozen other jurisdictions, and it is a difficult matter to trace stolen property.

Criminal Justice, The total number of persons dealt with by the criminal courts was 1,14 kp-536 or 47 per cent. were convicted, and 28 were awaiting trial at the end of the year. 40 appeals as compared with 30 were presented. Of these in 25 cases the sentences were confirmed, in 2 modified, in 8 reversed, and in 1 enhanced, and 4 were pending at the close of the year. 92 persons were committed for trial to the Sessions Court: of these 61 were convicted. Although there was a decrease in the number of offences generally, the number of serious offences, such as murder and dacoity, were greater. Convictions were obtained in all the dacoity cases.

Jals

The number of jails (8) was the same as last year and cost Rs. 8,396. Inclusive of untried and civil prisoners 653 persons were sent to jail. The daily average was 138.

Civil Justice.

The 5 civil courts disposed of 1,256 suits, leaving 447 in arrears; 299 suits were contested and but 85 related to immoveable property. The number of fresh appeals was 77; 83 were disposed of, leaving arrears of 20. 26 special appeals were also decided.

Registration.

993 documents were registered. The balance in favour of the department was Rs. 3,395.

Municipalities.

There are two regularly constituted municipalities at Shapur and Sangli, and the funds were chiefly applied to the improvement of roads.

Weather and Crops.

The rainfall was below the average, and the kharif crops were, as a rule, failures. The "rabi" crops were fairly good, but in Shirhatti on the Tungbhadra they were poor. In spite of the indifferent crops the prices of agricultural produce continued very low, and added to the difficulties of the rayat. The result has been a decrease in the revenue, as revenue collections had to be postponed. Fodder was scarce and dear, and the water-supply soon ran short in many places. Cattle-disease also declared itself.

Forests

The area set apart for forests was slightly increased during the year, and is now over 91 square miles. Rs. 5,846 were realised from this source of revenue.

Owing to necessity of postponing revenue collections in consequence of the bad harvests the administration had to curtail the amount it would have otherwise spent on works of public utility. As compared with last year the sum spent, Rs. 41,321, was small; besides this, Rs. 1,172 was spent in Mhaisal. The main works were the maintenance and improvement of existing roads, the completion of three school-buildings, a kacheri, a dispensary and police lines at Kavthá, the construction of 2 dharmshálás and 1 chávri, the completion and deepening of wells, the improvement of the Sángli Jail, and many other petty works. The building of the gateway in front of the Divánkhána at Sángli was also continued.

The actual receipts amounted to Rs. 8,52,435 and the expenditure inclusive of Rs. 1,15,464 paid to Government in repayment of the loan of nine lakhs was Rs. 8,16,901. The balance at the close of the year was Rs. 7,20,160 inclusive of investments, and the outstandings (the bulk of which are good debts) amount to Rs. 2,93,415.

SA'NGLI.

Finance.

The State leased its abkari revenue to Government for a term Miscellaneous of five years commencing from 1st August 1881, Government on their part agreeing to pay compensation based on the average realisations for the previous ten years, plus 25 per cent. for any prospective increase. The compensation payable amounts to Rs. 28,760.

The receipts in Mhaisal were Rs. 15,359 and the expenditure Rs. 14,262, of which Rs. 6,697 was paid to Sángli in commutation of service.

The population according to the late census is 196,832.

The number of births was 7,241 and deaths 4,454.

There were six dispensaries at which 24,612 persons were treated. The erection of suitable buildings for the dispensaries at Terdál and Shirhátti has been decided on.

Census.

Vital Statistics. Medical Rolief.

There were 4,232 vaccinations performed. Of these 3,894 were successful.

Vaccination.

The number of schools was 56 or 8 more than last year, and the number of scholars 3,191, of whom 157 were girls. Besides the above there were 51 indigenous schools attended by 1,343 pupils. 14 of these schools were recommended for grantsin-aid.

Instruction,

SAVANU'R.

Area, 70 square miles; Population (1881), 14,763; Revenue, Rs. 31,037.

Political.

The Chief is of Afghan descent and has been educated at the Rájárám College. Although young he is already well acquainted with the details of administration, and bears a high character. In February 1882 he was married to his nieco and at the same time his sister was married to the Nawab of Janjira. The marriages were celebrated with due eclát. There were lavish displays of fireworks, and presents of rich dresses were exchanged by the parties. The guests also made the usual presents and received suitable returns. A number of Mahomedans and Bráhmans were fed, and two convicts in the State jail received free pardon and were set at liberty as an act of grace.

The town of Savanúr was surveyed in 1876-77, and an inquiry into titles to houses and lands has been in progress, but very slowly, only 12 cases having been disposed of during the year.

The strength of the police is 38 foot maintained at a cost of 79 persons were arrested and 71 sent for trial, of whom 36 were convicted, showing a success of 45 per cent. There is a large increase in the number of offences and of accused persons arrested, 76 cases remained undetected, including 22 cases of houseSurvey.

Police.

Chap. I. POLITICAL.

Savanu'r.

breaking and 1 of dacoity with murder. The value of stolen property also increased from Rs. 252 to Rs. 1,989, of which Rs. 389 was recovered; or only 19 per cent.

Criminal Justice. The criminal court convicted 35 persons and released 42, there were no arrears, and only 2 persons were sentenced to imprisonment for more than six months. The fines imposed amounted to Rs. 411, of which Rs. 328 was recovered. 13 appeals were made, and the sentences were reversed or modified in 7 cases and confirmed in 7. 17 persons were admitted into the jail at Savanúr, when the daily average under imprisonment was 7 persons; the cost was Rs. 290.

The civil courts disposed of 65 suits, and 12 remained undecided. 36 documents were registered, but the work is said not to be properly done.

Municipal.

The income of the Savanúr Municipality was Rs. 3,800, chiefly raised by a house-tax and wheel-tax and by the farm of tobacco and snuff. The expenditure was Rs. 1,500. The roads are well made and in good order.

Rainfall.

The rainfall was 29.85 inches, and the fall very unseasonable for the kharif but good for the rabi. The large tank at Savanúr dried up in January and the gardens round it suffered severely. The price of grain was low, but kadbi was scarce and dear. The want of drinking water was acutely felt, and cattle had to be driven long distances in search of water and grass.

Forests.

There is a small forest plantation at Mulkeri of no great value and which has frequently been damaged by fire. In July 1882 about 800 trees were destroyed by fire.

PublicWorks.

Rs. 11,769 were spent on public works and the only work of importance is the police lines at Savanur. The improvement of the Moti talao, on which the large and valuable gardens at Savanur depended, has also been carried on, but expenditure has had to be curtailed, owing to the expenses of the Nawab's marriage.

Water-supply

The tank at Siddapur is used for irrigation, and so is the Moti talao; the crops under the former were almost lost from failure of water, and half the water-rate had to be remitted.

Revenue.

The revenue, exclusive of money borrowed and deposits, amounted to Rs. 59,500 against Rs. 56,800. The land revenue was Rs. 4,41,800 and the sáyar Rs. 5,100. The expenditure was Rs. 59,800. The marriage expenses of the Nawáb's sister were Rs. 2,500, and his expenses had not been made up, but the account has since been submitted, and amounted to Rs. 26,400; Rs. 16,600 represent allowances to Khánjádas. A drawback of 20 per cent. on the duty on opium purchased for the State has been allowed by Government, but the consumption is trifling, and only amounted to $7\frac{1}{2}$ lbs.

Vital Statistics.

438 births and 385 deaths were reported. There were 303 primary vaccinations and 15 re-vaccinations.

Schools,

Education has made some progress. There are 3 schools with an average attendance of 190 scholars; one is a girls' school.

SIND STATE.

KHAIRPUR.

Area, 6,109 square miles; Population (1881), 129,153; Revenue, Rs. 6,44,000.

The Commissioner in Sind writes:—"There is a kind of patriarchal government it is true, but more like that exercised by the head of a small tribe than the established government in a regular State.

"The year has been marked by the outbreak in the jail at Ahmedabad: also by a dastardly attempt to assassinate the Mir on the 3rd April 1882. The Mir was severely wounded by a pistol bullet in the back, which, as His Highness was at the time on a camel, travelled upwards and lodged under the shoulder, where it still remains. The wound was treated by the Civil Surgeon of Shikarpur, and the Mir, under Dr. Peacock's judicious treatment, seems to have quite recovered, though for a time he was in considerable danger. The assassin, who fired four shots in all, was shot on the spot by the Mir himself. The cause of this attack on the Mir has never been satisfactorily explained."

The greater part of the State is a sandy desert, and the Mir estimates that the land cultivated is about 150,000 acres and the culturable waste is about 10,000 acres. There is no legislation except the will of the Amir; but by his proclamation, dated 26th September 1872, the laws of British India are in force in the Khairpur State mutalis mutandis.

The police force is 115 mounted men and 191 foot maintained at a cost of Rs. 28,920. "This force, if properly looked to, would be ample, and in the large proportion of mounted men is much superior to our own. During the inundation season a very curious little force of 'horse marines' is kept up. A few boats are hired, and to each are assigned two boatmen and a horseman. The horses got as well accustomed to the boats as the men; and the arrangement seems to be extremely well suited to the country and sufficiently efficient to be very unpopular among the predatory riverine tribes".

The material of the force is not bad. The men are ragged and disorderly, but stout, hardy, and well-armed with good cutting swords, sometimes also with fire-arms. The officers are mostly very ignorant and stupid, and many are accused of being very corrupt. A few, however, are Baluch and Patháns of a very good rough stamp, and well fitted for their work.

The police arrested 570 persons and sent 435 for trial, of whom 362 were convicted, the success being 83 per cent. It is said that it is a good deal easier to obtain a conviction in the Khairpur courts than in British India. The amount of crime is about the same as in the past year. 7 murders, 1 robbery and 9 cases of house-breaking make up the serious crime. The thefts are chiefly cattle thefts. The value of property stolen is reported to be Rs. 4,802, of which Rs. 3,991 was recovered or 83 per cent.

POLITICAL. KHAIRPUR.

Chap. I.

403 offences were reported, and the court convicted 362 persons and released 206; only 2 cases were left in arrear.

362 prisoners were admitted to jail, and the daily average in confinement was 70, but as a matter of fact there was, during most of the year, no prison properly so called in the State.

Previously to July most prisoners were kept in an enclosure in the lower citadel of Ahmedabad fort. But they mutinied, seized the citadel, and were reduced after a siege of five days. The re-captured survivors were then dispersed among the various "thánás" or police posts, and His Highness set about building a jail, which is likely to be a very suitable building. prisoners do not seem to be insufficiently fed. They are not set to any labour, except occasionally to build "landis" (tabernacles of green branches) for His Highness (who never lives in a house), his family, or his guests. There is evidently next to no discipline among them or among the establishment of so-called jail guards, and escapes are frequent.

Registration.

The court decided 31 suits and left 6 in arrear, and the Mir heard 2 appeals. The registration work is performed by Kázis, who are stationed at taluka head-quarters, in the presence of the Kardar and the Zamindár, who attest the documents, and in the town of Khairpur the work is done at the kotwáli. number of documents registered during the year was 18, and the receipts amounted to Rs. 413, whilst the amount disbursed was about Rs. 107.

Municipal.

No municipalities exist in the Khairpur State.

Military.

The amount due under the head military was Rs. 1,72,425 for the year under report, and Rs. 87,531 being the arrears remaining to be paid at the end of the last year. Thus the total demand against His Highness' Government was Rs. 2,59,956. The past year's arrears have been paid up with Rs. 98,000 out of the demand for the year 1881-82, leaving a net sum of Rs. 74,425 arrears due.

The Political Agent states no accurate information can be given about the armed force of the State. "Probably about 1,000 infantry and 500 horse could be got together for field service within the State, exclusive of armed peasantry, but including police; and half that number for service elsewhere in Sind. do not consider any force available for a distant campaign. There is no artillery efficient for any purpose, but saluting. His Highness owns about 20 bronze and iron smooth-bore guns and mortars, some of them of large calibre, but mostly dismounted. or mounted on carriages unfit for service; and his trained gunners do not now exceed a dozen mon. The troops have all good cutting swords; some have efficient sporting fire-arms; and more matchlocks. The horsemen are efficiently enough mounted for irregular service and ride well, but cannot manœuvre."

Agriculture.

The inundation in the commencement of the season was nor-The area brought under both kharif and rabi (autumn and winter) cultivation was about 149,916. The crop consisted of millets, indigo, cotton and oil-seeds. Late in the season, however,

65

POLITICAL. KHAIRPUR.

the river rose, and damaged the crops to a certain extent. The area given is only approximate, as revenue in the Khairpur territory is chiefly levied on the "Battai" system, i.e., in kind, on a percentage of the gross produce.

Forests.

There is no regular forest system in the Khairpat Etate. But a great part of the waste land is set aside for game preserves, and much more is under jungle. The Riverain forests are exceedingly valuable, and easily command the market in poplar timber for house-building and the like, but the tamarisk fuel supplied to steamers is less valued than our own by engineers. The inland jungles are less valuable, both as inferior in quality and for want of communication with markets.

Quarries.

The only quarries that are to be found in the Khairpur torritory are those of "Met" or fuller's earth. Large quantities of "Chaniba" or sulphate of soda are collected from the hollows formed by floods. Receipts from the first-mentioned article amounted during the year under report to Rs. 150 and from the latter to Rs. 31,869. Chamha is used in dyeing, and is a good substitute for salt in the preparation of certain articles of food.

Manufacture and Trade.

His Highness reports that trade was better this year than last. Indigo is reported to have been largely exported. The exports were of the value of Rs. 9,13,483 against Rs. 9,06,428 in the previous year, and the imports of the value of Rs. 6,35,051 against Rs. 5,79,876.

Some of the cotton cloths are of very good quality; some of them imitations of European patterns; others original. stamping of cotton cloth is very good and artistic, but the industry is very limited. The enamelling on gold and silver in green, blue and crimson is showy, but coarse and in bad taste, as is the gold and silver plate and jewellery. Some of the plain cutlery is good and the patterns indigenous, especially a peculiar form of sword-hilt.

None except the jail already mentioned. No roads are made, Public Works and none repaired, except in the case of temporary clearances made for the visits of His Highness, his family, or visitors.

Irrigation.

No new works were executed during the year under report. A sum of Rs. 20,255 was spent on canal clearances and repairs to bunds.

Revenue.

The following are given as the receipts and expenditure of the Khairpur State:-Receipts, Rs. 6,44,484; expenditure, Rs. 6,44,484. The revenue realised shows a decrease of Rs. 1,22,917-2-3, which is attributed to the damage caused to crops by the rise of the river late in the season. These figures are absolutely unreliable.

His Highness has agreed to abolish the manufacture of salt in his territory and receive his supply from the British Government, and to abolish the import and export of opium, to manufacture enough for his own territory only, and to assimilate his duty and price to ours.

There are two native physicians who treat patients in Khairpur. His Highness has two attached to his camp. No fees are

Dispensary

[1881-82.

KHAIRPUR.

charged and no record is kept. The annual expenditure under this head, including salaries and contingencies, amounted to Rs. 6.658.

Vaccination.

During the year under report there were two vaccinators employed in the Khairpur territory and one more was to be added. There were 2,504 successful and 32 unsuccessful vaccinations in primary cases. In re-vaccinations 354 cases were successful and 62 unsuccessful.

Schools.

There are 6 schools with 2,129 scholars, but the attendance is very poor.

ADEN.

Area, 70 square miles; Population, 34,860; Revenue, Rs. 1,09,600,

The Arab Chiefs in the neighbourhood comprise ten tribes who are nearly all stipendiaries of Government, and the relations of the Residency with the Tributary Chiefs and States have been on the whole satisfactory.

The renewal of hostilities between Makala and Shehr terminated in the capture of Broom, which was acomplished with very little loss of life. The defeated Nakeeb of Makala has taken up his residence in Zanzibár.

The pressure of the civil population upon the military town and garrison led to arrangements being made to acquire a suitable site to locate the large number of natives. The population had greatly increased, especially among the classes who lead a hand to mouth life, and by the acquisition of Shaikh Othman in February 1882 the difficulty of want of room will be removed. The task of inducing the civil population to occupy the new site was one of some difficulty, but good progress was made, and upwards of 150 houses were in course of crection. As an inducement no rates or taxes will be levied in the new settlement until 1884. The cost of laying out the ground was Rs. 11,360, not including the purchase money, and it has been decided that the municipality shall bear the cost.

Since 1880 efforts had been made to settle the boundary between the Abdali and the Fadhli which had been a fruitful cause of dissension, and during the year the boundary has been defined. The Fadhli has also bound himself by agreement with the British Government to restrain the Subaihi from annoying travellers in consideration of the stipends paid to those tribes being made over to him.

The strength of the Aden police force is 141, the cost Rs. 35,500 and the proportion 1 to 247 of the population. The cost of the water police was Rs. 4,647. 542 persons were apprehended, of whom 462 were convicted, or 85 per cent. The total amount of property stolen was only Rs. 2,335, and 58 per cent. was recovered.

There are 1 Sessions Judge and 4 Magistrates at Aden who convicted 655 persons or 83 per cent., and released 129. 333

Aden.

persons were fined. 138 were imprisoned for less than 6 months and 9 for more than 6 months, 62 were flogged and 109 expelled from the Settlement. There were only 2 appeals. '

In all there were 462 offences, viz., 547 in 1880, and the decrease is thus explained by the Political Agent: As it was known that the poorer portion of the population would be removed to Shaikh Othman, the criminal classes, fearing prompt, expulsion, remained quiescent, and avoided being brought before the magistrates. It may be also that Somalis are beginning to recognise the necessity of abandoning their natural predatory and violent inclinations while they happen to reside in Aden. The absolute security to life and property under British protection is regarded as an mestimable benefit not to be lightly jeopardised. Each tribe as a body exercise a salutary restraint over its more troublesome members to avoid loss of reputation. Such are the causes assigned, by those who are best able to judge, for the satisfactory diminution in offences against the human body and property."

A riot took place amongst the Mahomedan population on account of a closed burial-ground which they wished re-opened.

The Vice-Admiralty Court held proceedings in the matter of H. M. S. Zephyr versus two Arab dhows named Budun Harrif and Budun Akrib. The dhows were destroyed at sea on suspicion of being engaged in the slave trade. The Court found that the commander had, in the first place, no legal authority to detain and search the vessels; and, secondly, that the dhows were not fitted up for the slave trade, but were ordinary fishing boats which periodically visited the Red Sea for lawful purposes. The Court condemned the captors in the sum of 1,925 as compensation for the loss of the said dhows, which sum was duly paid to the parties by order of the Lords of the Admiralty.

The Cantonment Magistrate tried 753 persons, almost all of whom were charged with committing nuisances. Rs. 1,842 was stolen in cantonment limits, of which 62 per cent. was recovered. Domestic servants are registered, and 173 are thus known to be in camp.

252 persons were admitted to jail and the daily average under confinement was 69; the cost of maintaining the jail was Rs. 10,813. Jail manufactures, such as printing, book-binding, &c., produced Rs. 2,357.

2,044 suits were disposed off by the Registrar and Assistants Civil Justice. to the Resident. This is a small decrease, and it is said traders are now cautious as regards credit, as only the property in pos-6 suits remained in arrears session of debtors can be attached. and there were no appeals. The courts have charge of 54 minors as wards. The Cantonment Magistrate disposed of 97 suits, but in no suit was a native sepoy or savar of the Aden Troop a defendant. 174 documents were registered, there were fewer sales, and the deficit of the department is Rs. 327.

ADEN.
Municipality,

The income of the municipality was Rs. 74,261 and the expenditure Rs. 72,832 with a closing balance of Rs. 30,821. There was no special improvement made, Rs. 2,951 was spent on roads, and Rs. 2,546 on education.

Military.

Two batteries of artillery, a battalion of the Seaforth Highlanders, a company of Sappers and Miners, and the 22nd Regiment N. I. were quartered at Aden, and a detachment of the 22nd Regiment N. 1. was stationed at Perim.

The cost of working the condensers at Aden was Rs. 60,905 and the water was sold at three different places from Rs. 1-12-0 to Rs. 2 per 100 gallons. There is also a condenser at Perim. A vegetable garden is maintained at Láhej.

Marine,

1,383 vessels touched at the port, being an increase of 111 over the previous year, and 1,128 of these were merchant steamers and vessels. 61 foreign men-of-war called at the port, the Italians taking the lead with 23 vessels and the French following with 13. Of the merchant steamers 843 were British, 88 French, 51 Austrian, 42 Spanish, 35 Italian and 23 Dutch, and a few steamers of other nationalities. There were only 19 sailing vessels, of which 10 were British, 5 Turkish and 2 American.

The Perim Marshag and floating lights were in good order: the two former are visible 21 miles and the latter 10. Two strandings and 19 miscellaneous casualties were reported.

Native Ships.

35 European and 85 native seamen were engaged and 63 European and 44 natives discharged; 23 were sent to the United Kingdom and 7 to India. 28 native passenger ships touched at Aden. 162 persons were landed and 272 embarked.

Weather.

The rainfall was 2 inches, and the mean temperature was 85°, maximum 88°.

Trade.

The trade of the Settlement may be seen from the following table:—

Import by Do, Do.	r sea land tre asur e,	Rs.	1,74,02,422 18,99,406 17,74,401
	Total	Rs.	2,10,76,229
Export by Do. Do.	sea land treasure	" " Rs.	1,27,09,636 8,46,860 24,67,803 1,60,24,299
Total Imp Do	3,71,00,528 3,84,00,915		
	Decrease	Rs.	13,00,387

The growing importance of the port may be inferred from the growth of the steamer traffic, which in five years has risen from 894 to 1,214 steamers.

Public Works

Rs. 2,58,394 was spent on public works. The most important was the theatre and recreation room for the European troops.

ADEN. Revenue.

The actual revenue of Aden is Rs. 1,07,600, but adding remittances, deposits and the proceeds of bills, &c., the total amount was Rs. 10,81,600. The chief sources of revenue are excise, stamps, The excise is partly on import duty and partly a duty on liquor distilled at Aden and fees on licenses to sell spirits and gánja. The rates were Rs. 50,655, while the charges were Salt is both imported and manufactured at the Rs. 9,092. Government ports; but as the total receipts were Rs. 10,245 and the expenses Rs. 14,263, including the payment made to the Sultan of Lahej, the duty has had to be raised 57 per cent. The stamp duties yielded Rs. 19,528. About 269 lbs. of opium were sold, and it is said that the receipts amount to Rs. 6,099.

The Aden Local Funds are made up of pilotage dues and harbour dues with the cantonment receipts and the dispensary fund. The total receipts were Rs. 1,35,229 and the total expenditure Rs. 1,46,237. This includes Rs. 70,000 for the purchase of the Maala Pier. The water police and the port office and establishment are paid from these funds, and the charge for light-houses is also borne by them.

Only 200 births were registered and 1,840 deaths. From July to October large numbers of starving Somalis arrived in Aden and perished from duarrhoea and dysentery. Cholera prevailed from August to September. The first cases occurred among the coolies working a cargo of rice on board the S. S. Columbian which had arrived from Bombay. The outbreak commenced on the 2nd August and did not spread to persons unconnected with the vessel until the 14th. In all 151 persons died, all patients being of the lowest classes, and the majority emaciated Somalis. The disease spread to the interior, where the mortality was considerable.

In consequence of the existence of cholera in Aden, the Egyptian authorities on the 8th September imposed a quarantine of 14 days (including voyage) on arrivals from Aden, and on the 22nd subjected arrivals from India to the same. The Turkish Sanitary Board also imposed quarantine at Ottomon ports, and Malta also placed arrivals in quarantine. The restriction, as far as Turkish ports were concerned, was not removed till the 4th February, and the Egyptian not until the 22nd February 1882, when pratique was given to all ports in India except Bombay, and Aden was promised pratique if no communication was held with that port. To prevent obstruction to trade, vessels coaling without communication were permitted to have a note to that effect made on bills of health. On the 21st March, quarantine on arrivals at Suez from Bombay was suppressed, and Aden was at last free after a prolonged and troublesome period of quarantine, during the last five months of which no cholera was present in the Settlement.

During the year, 1,383 ships and 1,222 buggalows arrived at Pilgrim-ships the port. 28 carried native passengers., In all, 15,283 pilgrims passed through the port. All these vessels were inspected, but no case of contagious disease was detected

Vital.

Cholera Quarantine.

Chap. I.

70

ADEN.

Cıvıl Hospital. 2,992 persons were treated during the year, exhibiting a decrease of 102 as compared with the previous year. 24 cases of cholera were admitted, of which 20 proved fatal; and the civil surgeon remarks that this speaks well for the sanitary condition of the town where the inhabitants are crowded and not very cleanly in their habits. The rate of mortality has increased from 128 to 230. The majority of deaths were due to cholera and starvation.

Dispensary

9,867 patients were treated at the dispensary. The average daily attendance of out-patients was 124. The daily average of in-patients was 1. 9,423 were discharged cured or relieved, 338 absented themselves, and 14 died. The expenditure was Rs. 5,288. 1,632 persons were vaccinated, 1,193 successfully, 12 were re-vaccinated. Lymph has been supplied to Zanzibár and several vessels.

Schools,

An additional master was entertained in the town Arabic school on Rs. 15 a month payable by the municipality. The number of pupils attending the school on the 31st March was 64 as compared with 68 on the same date in the previous year. The average monthly attendance has been 66.9. No considerable falling off in attendance has taken place in consequence of the increased rate of fee charged during the year. The receipts amounted to Rs. 1,022. Government contributed Rs. 4,973 to the cost of this school, and the municipality Rs. 2,618.

The vernacular school has had an average monthly attendance of 285. The increase is satisfactory, but the attendance is irregular, there being 400 pupils on the register, of whom upwards of 100 daily absent themselves. The attendance at the Maala School has decreased from 123 to 108, but this is possibly owing to a large exodus of Somalis that has taken place in consequence of increased taxation. 56 Indians attend the English school as well as 9 Arabs; 6 Indians, 104 Arabs, 484 Somalis and 5 other Africans are receiving instruction in the vernacular schools.

CHAP. II.—ADMINISTRATION OF THE LAND.

Surveys.

GREAT TRIGONOMETRICAL SURVEY OF INDIA.

THE several parties of the Topographical Survey appear to have I.- Topogramapped about 6,534 square miles on a scale of 2 inches to the mile, 1,097 square miles at 5 inches to a mile, and 598 square miles at 1 inch. Their work also includes the survey and mapping of the important towns of Surat, Dhulia and Sholapur, and about 4,331 square miles have been prepared for next season's work.

PHICAL SURVEY.

In Cutch the party surveyed topographically 1,619 square miles Cutch Party. on the scale of 2 inches to 1 mile and 598 square miles of desert "Ran" on the scale of ½ inch=1 mile, making a total of 2,217 square miles. 1,375 square miles of country were also triangulated in advance and in readiness for the topographical work of the ensuing season. The 2-inch maps were drawn for reduction by photography to the ordinary 1-inch scale. The cost of the survey was Rs. 23 per square mile.

The work includes the remarkable little island of Pacham. The island has a circumference of 65 and an average diameter of 16 miles, and contains 19 villages, of which the most considerable is Khawada, and is crossed from west to east by two ranges of mountains called the Kala Dongar and Gora Dongar. The Kala Dongar or black hills are much higher than the Gora Dongar, the peak of Ombia, or Pachmai Pir, rising to an altitude of 1,520 feet above sea-level. This range is the highest in Cutch.

The open grassy plains are known as Bani. The wide expanse is covered by a semi-saline grass called Dhrab and a low straggling plant called Lana, somewhat resembling heather in appearance, and used as food for caniels and cattle. There are no villages on Bani, only clusters of huts occupied during the dry season by Sindi cowherds.

In Gujarát work was chiefly done in Baroda, the Dángs and in Bulsar and Chikhli. It includes an area of 1,287 square miles on the scale of 2 inches to a mile and 152 square miles on the scale of 4 inches, and also a survey on the scale of 12 inches to a mile of the cantonment and environs of Surat, covering an area of 25 square miles including the city, which has been filled in by pantographic reduction from the sheets of the city survey made by the Gujarat Revenue Survey. The following important places fall within the area surveyed : Chikhli, Amalsad, the Baroda towns of Gandevi and Naldhara, Bilimora, Bansda and Dharampor and the remarkable hot sulphur spring of Unai, on the boundary between the Baroda and Bansda States, noted for its annual fair,

(lujarát Party.

Chap. II.
ADMINISTRATION OF THE
LAND.

when thousands of people congregate and bathe in the sacred water, the temperature of which is said to be lowered for the occasion by the local goddess. When the Superintendent was there, the heat of the water was 138° Farenhein

Several research of historical interest were mapped, notably Pátan, population 32,640, standing on part of the site of Anhilwara, the former capital of Gujarát before Ahmedabad was built, and Sidhpur, a place of pilgrunage on the Saraswati River where are the remains of the famous Rudra Mala temple of Shiva.

Little remains to be done by the Gujarát Survey; the Dángs ought to be finished in the next season, and Párdi has to be mapped. Work will then be transferred to the Panch Maháls, which has to be surveyed for forest purposes.

Khándesh Party. The Khándesh party was chiefly employed in the Erandol, Páchora, Amalner and Chálisgaon tálukas and in one forest tract to the west chiefly inhabited by Bhils, who cultivate a different piece of land every year. The water is said by the natives to be poisonous from the roots of certain shrubs which grow on the river-banks, and as the water falls it gets out of the reach of the roots and becomes purer. It is dangerous to enter these tracts before April and May. The total outturn of work during the season consists of 1,554 square miles of survey on the scale of 2 inches to the mile, and includes the town and suburbs of Dhulia on a larger scale. 1,020 square miles were under cultivation.

It is expected that this survey party will have finished its work in the next season; what remains is some country in Pimpalner and Chálisgaon and some ontlying British villages in the Nizám's territory. It commenced work in 1871 to survey Khándesh and the Native States to the north of that district and south of Bhopál and Málwa, and will have completed its work in twelve years.

Konkan Party. The Konkan party worked under the superintendence of Major Lee Smith in an unhealthy country, from the effects of which 7½ per cent. of the native establishment were permanently incapacitated and the Superintendent himself died of fever. The area surveyed at 5 inches to the mile was 945 square miles at a cost of Rs. 53 per square mile, and includes the important towns of Bassein, Bluwndi, Agashi, Sopara, Murbád and Sháhápur, and the Tungár and Maulia hills. The height above sea-level of about 200 hill tops and passes, &c., was determined, and 450 square miles of traverse work was prepared in advance for next year.

Southern Maratha Party. The Southern Marátha party was employed on the survey of 2,074 square miles of country lying chiefly in Kolhápur and Jath and in Sátára and Sholápur. The country is described as uninteresting, the only marked feature being the range of hills which may be said to separate Sholápur from Sátára. The villages are few and far apart, with occasional mango topes affording grateful shade and convenient camping ground. Good water also is very scarce; altogether the country seems to be studded with wells containing brackish water, or so shallow that immediately the hot weather sets in they dry up.

A survey and map of the city of Sholapur has been prepared, and will soon be ready for publication.

Tidal observations were taken at Aden, Karáchi, Bombay and Kárwár.

II.—TIDAL AND LEVEL-LING OPERA-TIONS,

At Aden the tidal observations were carried on without a break, and a new anemometer has been put up to replace the one worn out. The observatory was inspected in December, and all the instruments cleaned and put in order.

The observations at Karáchi were made satisfactorily with few unimportant interruptions. The observatory was inspected in December.

In Bombay observations were taken at the Apollo Bandar, and the results have been entirely satisfactory. The new gauge has not been put up at the Prince's Dock, owing to the question being mixed up with that of lighting the entrances to the Dock.

The tidal observations have been successfully carried on at Kárwár, and four years were completed on the 1st March. The anemometer, which had become worn out, was taken down and its observation suspended, as there was no spare instrument available.

There appears to be some engineering difficulty in excavating a place for the cylinder of the tide gauge at Bhávnagar.

All the observations made at the different stations were reduced in the office at Poona, and sent to England.

There were no levelling operations in this Presidency during the year, and the levellers were employed in connecting tidal observations in Bengal.

REVENUE SURVEY.

During the first two months of the year under report the control

*Sind Survey Department.
Gujarát do.
Poona and Násik do.
Ratnágiri do.
Southern Marátha Country
Department.

of the several survey departments* was exercised by Major-General W. C. Anderson, C.S.I., on whose retirement from the service on the 1st June, 1881, Mr. T. H. Stewart, C.S., assumed charge of the duties. Simultaneously, in accordance

with Government Resolution in the Revenue Department, No. 2976, dated 26th May 1881, the control of the Sind Survey was transferred to the Commissioner in Sind.

The following revenue survey departments were at work during the year:—

1 Gujarát Survey.

1 Poona and Násik Survey.

1 Ratnágiri Revenue Survey.

1 Southern Maratha Country Revenue Survey.

The subjoined statement shows the effective strength and outturn of work of each of the above-mentioned survey departments:—

Chap. II.
ADMINISTRATION OF THE
LAND.

REVENUE SURVEY.

•	Name of	Number of Parties or	FIELD OPERATIONS.			
Department.	Superintendent or Officer in charge.	Establish- ments employed.	Area surveyed.	Area classed.		
•	1 6		Acres.	Acres.		
Gujarát Survey	Mr. Beyts and Mr. Bulkley Colonel Laughton	\$ Z	8,150 751,968	25,924 599,420		
Poona and Nasik Ratnagiri Survey	Mr. Harrison	8 and 1 from Nov. 1881.	269,234	267,633		
Southern Maratha Country Survey	Major Ward	13	1,131,673	660,142		
Total	•••	31	2,161,025	1,553,119		
Total of previous year .	*****	31	1,845,878	1,886,045		

Thus it will be seen that there is a considerable increase in the area measured, but a decrease in the area classed as compared with the previous year.

Gujarát Survey. In the outturn of work of the Gujarát Survey there is a decrease both in measurement and classification operations. As explained in the report submitted last year, the work of this department is drawing gradually to a close. Its operations during the year were, for the most part, of a scattered and desultory nature. The measurement work has chiefly been confined to the breaking up of large survey "numbers" or fields into numbers of a more convenient size, and in demarcating bends in survey fields in accordance with Government Resolution No. 2608, Revenue Department, dated 21st May 1878. The classification operations were of a miscellaneous nature, being carried on in 4 tálukas of the Panch Maháls, in the Bulsár and Chorási tálukas of the Surat Collectorate and in the Sachín State. The total cost of this survey was Rs. 81,415 against Rs. 96,299 in the provious year.

Poona and Násik Survey. The outturn of work of the Poona and Násik Survey exhibits a considerable increase in measurement as well as in classification. This branch of the survey was employed on revision survey work in the Ahmednagar, Násik and Poona Collectorates. It is very gratifying to observe that there has been a still further decrease in the total cost per acre in the present year, it being Re. 0-4-2 against Re. 0-4-5 in the previous year. The total expenditure of the year was Rs. 1,77,731 against Rs. 1,80,496 in the preceding year.

Ratnágiri Survey, The outturn of the Ratnágiri Survey exhibits a considerable increase in measurement operations and a slight decrease in those of classification. This department was chiefly employed in resurveying the varkas lands in the Ratnágiri and Thána Collectorates. Two ostablishments, however, were employed in the survey of the Sávantvádi State and one in the Bhor State. The average cost per acre of the whole survey was Re. 0-10-9 against Re. 0-9-11 in the preceding year. The total expenditure

Chap. II.
ADMINISTRATION OF THE
LAND.

REVENUE SURVEY.

Southern Maratha Country Survey

CITY

Surveys. Ahmedabad.

Dhárwár and Hubli.

was Rs. 1,72,621 against Rs. 1,58,562 in the previous year. Of this sum Rs. 1,14,998 was charged to Government against Rs. 1,05,958 in the preceding year, the remainder being debited to the Savant-vadi and Rhor State Survey.

The Southern Maratha Country Survey was employed on the revision survey of the districts originally settled by that survey, the original survey of Kanara and the original survey of the Kolhápur State and the Jághírs of the Southern Marátha Country. The outturn of measurement work exhibits an increase and that of classification a decrease as compared with the figures of the previous year's report. The total expenditure was Rs. 2,10,692 against Rs. 2,14,703 in the preceding year, and the cost per acre Re. 0-3-5 against Re. 0-3-8½. This is the lowest rate per acre attained during the last six years. Of the total expenditure the sum of Rs. 1,71,888 was charged to the British treasury against Rs. 1,66,234 in the preceding year, the balance of Rs. 38,804 being defrayed by the Kolhápur State.

The operations connected with the Ahmedabad City Survey were brought to a close during the year under report, and the completion report was submitted to Government in due course.

The original field work both in Dhárwár and Hubli having been completed, it was decided to make an effort to wind up the operations in both towns, and to hand over the records to the respective municipalities. With this view a process corresponding with "Pôt Pahani" was undertaken. Each individual number has been reexamined in the field, and corrections, which were very numerous, have been effected wherever they were required. Some little mapping work of the Dhárwár City Survey remains to be done, and this is being pushed on as fast as practicable. The mapping work of the Hubli City Survey has been taken in hand, and it is

Original and revision measurements were carried out in the following talukas:—

hoped that its completion will be effected at an early date.

SIND REVENUE SURVEY.

Administration of the Land.

Sind
Revenue
Survey.

Government, and in making final re-grants to hereditary jaghir-dars.

The settlement work for the year under report has been unusually heavy, probably more than three times as much as has been done in any single year since the survey of the province was commenced. The following are the talukas that have been dealt with:—

Shikarpur Collec	ctorate	Larkhána	Táluka	Revision settle- ment sanctioned
Karáchi		Manjhand		and introduced.
Shikarpur	}	Mehar Tigar Kakar Labdarya		Temporary settle- ment sanction- ed and intro-
Karáchi		Manjhand		duced.
Hyderabad		Kandiaro Naushahro Mora Shahdadpu		Being already under experi- mental revision settlement, en- hanced rates
Shikarpur	•••	Rohri		were sanctioned and introduced.

In all twelve tálukas.

The estimate and expenditure for the year were as follows:

Budget Estimate Rs. 1,87,935
Expenditure ..., , 1,79,887

Unexpended Balance ... Rs. 8,048

The saving was due principally to the establishments having been rather under strength during the year under report.

Settlements.

The financial results of the land revenue settlements effected during the year are summarised in the following statement:—

LAND REVENUE.

					The same of the sa		Percentage.

In Gujarát the original settlement of 3 Náik estates of the Dohad Táluka was effected, the result being that the revenue was raised from Rs. 13,142 to Rs. 16,035, which is equal to an increase of 22.0

Dohad.

Chap. II.

ADMINISTRATION OF THE
LAND.

LAND REVENUE. Godhra.

Nevása.

per cent. The survey rates were also introduced into one village (Ambejeti) of the Godhra Taluka, Panch Mahals, with the effect of raising the assessment from Rs. 45 according to the old system to Rs. 60, or 33 3 per cent.

Proposals for the revision settlement of 118 Government and 19 inám villages of the Nevása Táluka were duly submitted to Government and sanctioned, but the introduction of the revised rates has been postponed until the year 1883-84. These rates will have the effect of raising the revenue from Rs. 1,12,840 to Rs. 1,44,345, or an increase of 27.9 per cent. in the Government villages and from Rs. 9,196 to Rs. 12,246, or 33.2 per cent., in the 19 inam villages. From a comparison of the present condition of this taluka with that reported in 1854 at the time of the original settlement, it appears that in many respects there has been material progress, while in others the advance has not been so great as might have been expected. The soil in this taluka is generally good, except in the uplands, which have now been mostly taken up for forest. As much as 68.1 per cent. of the cultivated area is devoted to the coarser food-grains, though much of the soil is suitable for wheat, gram, cotton, linseed and other exportable produce. The statistics compiled for these villages show an increase of 17.8 per cent. in the agricultural cattle during the period of settlement. There has also been a large increase in cows and buffaloes; ploughs have increased 33.2 per cent., and horses and ponies 29.6 per cent. Of carts there was a larger number at the original settlement than has been usually found to be the case in other talukas; nevertheless in the thirty years they have increased from 1,641 to 2,558, or by 55.9 per cent. There is a slight decrease in the number of sheep and goats; but in a taluka where cultivation has enormously increased, and where the uplands upon which grazing was formerly practised have mostly been taken over by the Forest Department, this decrease is not likely to cause any surprise. It has been ascertained that, out of a total forest area of acres 22,146 in this táluka, acres 8,113 are now closed to grazing. The number of thatched houses has also decreased 39 per cent., while tiled houses have increased 22.5 per cent.; from this it may be inferred that there has been an improvement in the condition of the people. The record of prices of food-grains shows that there have been violent fluctuations during the currency of the original settlement, the average price of jowari, the staple food-grain, being 55 seers per rupee in the first decade, 30 in the second, and 244 in the third. There is also much increase in the item of cultivated area which is more than double what it was at the original settlement. The maximum dry-crop rates vary from Rs. 1-6-0 to Rs. 1-2-0, and the incidence of assessment per acre averages Re. 0-10-2 in the case of Government villages. In the case of inam villages the maximum dry-crop rates vary from Rs. 1-8-0 to Rs. 1-2-0, and the incidence of assessment per acre averages Re. 0-12-2.

Málvan.

The original settlement of 25 villages of the Málvan Táluka was effected during the year under report, the result being that the revenue was raised from Rs. 40,720 to Rs. 49,760, which is equal to an increase of 22.2 per cent.

LAND REVENUE. Karjat.

Sálsettc. Honávar.

2 inam villages in the Karjat Taluka and 4 leasehold villages in the Salsette Taluka were also brought under the survey settlement; the result being that in the former the revenue was raised from Rs. 1,777 to Rs. 1,855, or 4.89 per cent., and in the latter it was reduced from Rs. 6,382 to Rs. 6,325, or 0.89 per cent.

In Kánara the survey settlement has been introduced into 105 villages. Of these, 10 villages belonging to the Honavar Taluka have had their revenue raised from Rs. 20,684 to Rs. 24,686, or equal to 19.3 per cent. Rice is the staple crop, and the maximum rates vary from Rs. 6-8-0 to Rs. 5-8-0. For dry-crop lands the maximum rate fixed is 12 annas per acre, and for garden Rs. 12 per acre.

The original settlement of 63 villages of the Sirsi Táluka was effected during the year, the result being that the revenue was raised from Rs. 30,722 to Rs. 43,832, or 42.7 per cent. Rice is the chief crop produced in these villages. Sugar-cano is grown to some extent in the lower rice lands in occasional rotation with The dry-crop grain is confined to "ragi" alias "nachni", the common grain in wet and jungly districts. The garden cultivation is that common to all this part of Kánara. Supári or areca-nut is grown to perfection, often to the extent of a thousand trees to the acre. Around the supari trees the pepper vine and the pan-vel, the creeper of which produces the leaf caten with the areca-nut, may one or the other commonly be seen, and cardamums also are not unfrequently grown below and in the spaces between the supári trees. Plantains are also to be constantly found in the supari gardens. The maximum rice rates fixed for these villages is Rs. 4-8-0 and Rs. 4-0-0, those for dry-crop lands are Re. \$14-0 and Re. 0-12-0, and for garden Rs. 14-0-0 per acre.

Of the Supa Peta of the Haliyal Taluka 32 villages have been settled during the year. Their revenue has been raised from Rs. 9,034 to Rs. 10,273, or 13.7 per cent. In all these villages the climate is very suitable for rice, and sugar-cane is grown to some small extent in the low-lying rice lands in occasional rotation. The dry-crop grain is confined to ragi and other coarse grains. Coffee is grown to a small extent in patches adjacent to habitations. The maximum rice rates sanctioned for these villages are Rs. 4-8-0 and Rs. 4-0-0, those for dry-crop Re. 0-12-0 and Re. 0-8-0, and for garden land Rs. 8-0-0 per acre.

The original settlement was introduced into a lapsed village of Khánápur Táluka in the Sátára Collectorate with the effect of raising its revenue from Rs. 938 to Rs. 1,769, or 88.6 per cent.

The survey settlement was introduced into one village of Vádi NativeStates. Peta, the result being an increase of 21.11 per cent. over past collections. In addition to this the field inspection of 12 villages in the Vádi Peta was completed.

The survey settlement of 60 villages of the Kolhápur State was effected during the year. The revenue collected during the year previous to the settlement was Rs. 63,781; under the survey settlement it will be Rs. 67,216, which is equal to an increase of 5.4 per cent.

Haliyal (Supa Peta).

Khánápur.

Kolhápur State.

Chap. II. 80 ADMINISTRA-TION OF THE LAND.

Financial.

The total expenditure on surveys in this year was Rs. 6,42,459, out of which Rs. 96,427 were paid by the Native States of Sávantvádi, Bhor and Kolhápur, the balance Rs. 5,46,032 being paid out of Imperial revenue.

The settlements effected during the year have resulted in the imposition of a yearly assessment of Imperial revenue of Rs. 59,727 in excess of past collections and of Rs. 13,875 in alienated villages and Native States.

It will be seen from the statement in the Appendix that the total cost of revision settlement operations up to the present time is Rs. 24,07,533. This expenditure has resulted in an annual increase of Rs. 14,54,963 in the land revenue, which cumulatively has amounted to the sum of Rs. 1,02,35,036 in all the years which have elapsed since the introduction of these revised settlements.

ALIENATION SETTLEMENT.

The inquiry into alienations was completed some years ago and the department abolished, but a special officer has been retained for the work in the Panch Mahals, which it is estimated will not be finished within the next two years. The titles of 44 inam villages were settled by *him with their sub-alienations, 1,533 claims to alienated lands were inquired into and the settlement of Patels' Bhayad lands in Halol was completed. Proposals for the watan settlement of Halol and Dohad were submitted and the settlement of the district hereditary officers' watans in the same tálukas, which had been approved by Government, was carried out.

Waste Lands.

The area of culturable land is not known for those districts such as in Sind and Kánara where a survey has not been made, and in other districts it is not a fixed quantity but varies from year to year. Deductions are frequently made when land becomes unculturable from such causes as the action of salt water, or when it is damaged by floods, or again when land is handed over to the Forest Department to be included in a forest reserve. The quantity of Government culturable land is also liable to increase or decrease by the effect of alienations and lapses. Taking the proportion of culturable waste land to the total area, it would appear that in the Upper Sind Frontier and the districts of Thar and Párkar and Shikarpur more than half the land which can be cultivated is lying waste and there is no early probability of these lands being brought under cultivation; but in the taluka of Sohwan in Karáchi, which has been surveyed, the waste is not quite 7 per cent. In Gujarát the land is fully occupied and the culturable waste is between 5 and 6 per cent. of the total arable land. Naturally this represents the worst and most inaccessible portion, and a bad season with low prices tends to cause such lands to be relinquished as unprofitable. This has occurred in Ahmedabad and Broach, where a considerable number of holdings has been relinquished. The lands in Kaira are in parts the most densely occupied of any in the Presidency, but towards the east there is a considerable quantity of waste which affects the percentages and makes it appear that nearly 19 per cent. of the land is waste. The Panch Mahals is an exceptional district, for the most part covered with dense forest. Here as much as 52 per cent. of waste land offers great advantages to enterprising set-A fair quantity was taken up during the year, and now that the railway has opened up the district there have been frequent applications for plots along the line of rail, which are however reserved for forest. In Thana a quantity of salt land has been disforested and there have been several applications to take up these plots for cultivation. No land is to be had in Ratnagiri, and in Satara the waste is only 2 per cent., but this is obliged to be kept open pending a settlement of forest boundaries. In Khandesh and Nasik, 15 to 16 per cent. of the land is still waste; in Násik it is said to be poorland, but in Khándesh good land is still available. In Poona nearly 8 per cent. is waste, but some of it is kept open for the same reason as in Sátára. Ahmednagar, Sholapur and Kaládgi are districts labouring under great disadvantages of rainfall and where much of the soil is poor, but it is evident that large tracts are being rapidly

put under cultivation owing to the exceptional seasons of the past two years. In Sholapur 46,100 acres, in Kaladgi over 36,000, and in Ahmednagar over 22,000 acres were taken up. In Belgaum and Dharwar 8 to 9 per cent. is waste and in Lanara 14 per cent. of the surveyed talukas of the lastnamed collectorate the difficulty which impedes the extension of cultivation is the want of labour, which has to be imported from Dharwar and Mysore, and as the railways under construction will draw off a large part of the labour-supply, it is probable that the spread of cultivation will for the present be checked.

BOMBAY ADMINISTRATION REPORT.

Government Estates

There is nothing to record under this head.

Wards' Estates and other Estates under Government management.

When the property of a minor consists wholly or in part of land. the civil court usually entrusts the charge of the estate to the Collector. Many of the estates are of very small value, and the Collector of Broach, who has as many as 36 estates under his care, has applied to the civil court to be relieved of the charge of a number of petty properties, and proposes to transfer three of the most important to the charge of the Talukdari Settlement Officer. In Ahmedabad all the estates are under the care of that officer, and three of them were restored to their owners during the year free from debt. Whenever possible the minors are required to attend school, but there is no effective superintendence and control exercised over them, and the attendance is most irregular. The only estate under management in Kaládgi is noticeable from the fact that the rent recovered from the tenants is more than double the assessment according to the survey. In other districts there are either no estates managed by the Collectors, or, if any, they are quite unimportant.

In Sind there were only three important estates out of 13 under management. The young Mir of Hyderabad, who has been placed in the Rájkumár College, returned to his home on the plea that the climate of Káthiáwár did not agree with him.

ENCUMBERED ESTATES IN CHARGE OF THE TA'LUKDA'RI
SETTLEMENT OFFICER.

In addition to his regular duties under Act VI. of 1862 and Act XXI. of 1881 the Talukdari Settlement Officer was in charge of 36 minors' estates under Act XX. of 1864 as the deputy of the Collector and of 172 estates under the Civil Procedure Code and other Acts.

The number of estates under management at the beginning of the year was 81, and this number has been reduced to 57, owing to the separate estates of all those who are jointly liable being shown as one estate. Of these four estates have re-paid all their dues, and in the case of six others payments have already been ordered which will complete the liquidation of their debts. The total liabilities amounted to Rs. 2,90,827, i.e. Rs. 2,47,368 to private creditors and Rs. 43,458 to Government, of which Re. 13,638,

Ahmedabad Tálukdárs, Chap. II.

ADMINISTRATION OF THE
LAND.

and Rs. 11,117 have been paid in liquidation of private debts and Government loans respectively. Taking into account a sum of Rs. 13,412, which is apparently available for payment, the rate of liquidation is 13½ per cent. against 12½ per cent. last year. This would doubtless have been considerably larger had the season been more favourable, but the harvest was below the average in the south-west districts of the collectorate. In the case of ten estates no payment could be made, although in five of these payments had been ordered but not finally debited in the accounts. In five others no payments are shown as having been made, but the estates have been handed over to the creditors to be enjoyed for a certain term in liquidation of liabilities.

It is under consideration to amend the law relating to Talukdars and to provide for a record of rights in their estates and a final settlement of existing share disputes. The partitions of joint shares will be promoted and alienations will be satisfactorily settled.

Kaira Estates.

There were 41 estates under the Act against 37 in the previous year, and the total amount of debt was Rs. 3,45,088, of which Rs. 21,690 have been re-paid to private creditors and Government during the year, and Rs. 1,914 have been ordered to be paid. When these payments are made, the rate of liquidation will be $8\frac{1}{12}$ per cent. against $6\frac{1}{7}$ per cent. last year. In the case of six estates there was no surplus available for liquidation, and in several cases the proportion of payment to the original debt was little more than nominal.

It will be necessary to exercise the power of sale of a portion of these estates to free them from incumbrances and to oblige the Thákors to exercise economy and assist in the settlement of their debts. To prevent sale, however, they are found willing to make extraordinary sacrifices; they will submit to live on the smallest subsistence allowance and will cheerfully sacrifice their hereditary taste for extravagance in marriage and funeral ceremonies. Recourse, therefore, is only had to this expedient in the last extremity.

The Act of 1881 empowers the manager to borrow money from Government to discharge the dobts of the Thákors, and advantage was immediately taken of it to borrow nearly Rs. 72,000 on account of nine estates which has been partly applied to the payment of creditors who had agreed to receive a moderate immediate payment in satisfaction of all claims.

A large number of petitions were received from petty Girásias and others to be admitted to the benefit of the Act, but their applications were refused, as they did not appear to belong to the class for whose benefit this special legislation was passed.

It has been decided to introduce the survey into some of these estates in order to prepare an accurate record of all existing rights in the soil and to fix the rent that should be payable, which is now fixed entirely at the owner's pleasure. In the Udhar estates it has been found that the cultivators are habitually rack-rented.

There were ten estates under management and the liabilities amount to Rs. 46,527 to private creditors and Rs. 2,03,277 to

Broach Estates. Government. Of this Rs. 2,618 and Rs. 30,342 respectively have been repaid during the year and Rs. 9,622 ordered to be paid but not finally adjusted. The average rate of liquidation is 13 per cent.

The surplus available for discharging labt derinds upon the collections of revenue that have been made, and as the rents are generally much in excess of the survey standard it is difficult to collect the full rent in seasons of scarcity. In justice to the tenants the manager has reduced the rents in A'mod, and this may prolong the management for a few years.

There were 33 minors' estates in Ahmedabad, 1 in Kaira and 3 in Broach under the management of the Talukdari Sottlement Officer, about half of which are in debt. The receipts in each rarely exceed Rs. 2,000, and in only one instance is the amount over Rs. 10,000. The debts paid amounted to over Rs. 26,000. The minors are dependent solely on the village schools for their education and it is found that an effective superintendence cannot be exercised over them. Their attendance is very irregular, and they come and go as they please. It has been suggested that the Talukdari Settlement Officer should be constituted a Court of Wards for landed estates in Gujarat belonging to the privileged classes and that the Government should exercise a discretion in withholding the management from a youth who has arrived at full age but is otherwise physically or mentally unfit to manage his estate.

In all 174 decrees against Tálukdárs were forwarded for disposal to the Tálukdári Settlement Officer, who endeavours to satisfy the claim in the manner least enerous to the debtor. If it can be satisfied within a reasonable time without sale the estate is taken under management, but if this cannot be done and the debtor is found to be hopelessly involved, sale is the only resource. In this way 60 properties were taken under management, 41 were sold, and in 46 cases the debts were compromised.

The expenses of the Tálukdári Settlement Officer's department averaged 3½ per cent. of the total revenues collected from the estates.

ENCUMBERED ESTATES, SIND.

The Act relating to the indebted Jághírdárs and Zamíndárs of Sind has been repealed by Act XX. of 1881, which re-enacts most of its provisions with amendments providing that loans may be obtained from Government to pay off such creditors as have agreed to enter into a compromise in consideration of obtaining speedy payment of their debts and continuing the management until the loan is paid off, and also providing for a sale of part of the property if it is considered expedient to do so in order to pay off debt. 253 estates remained under management at the close of the proceeding year to which 121 were added during the year, while 25 were released from management. In 16 of these cases the debts of the estates had been discharged and in the remaining 9 cases it was not considered expedient to keep the estates any longer under the protection of the Act. A

Minors' Estates.

Decrees.

Chap. II.

ADMINISTRATION OF THE
LAND.

loan of Rs. 58,740 was obtained from Government, and this with Rs. 85,222 obtained from the estates was applied to the reductions of debt, which at the close of the year stood at 6½ lakhs, the amount due to Government being triff 5½ lakhs in addition.

The whole determined by creditors amounts to nearly 321 lakhs. The majority of the claims have been inquired into by the manager, who has admitted nearly 17 lakhs as due. The indebtedness of each estate is rarely very large: in 191 cases in which all claims have been registered it is under Rs. 5,000 in each case, whilst in 62 cases it is above that sum. The manager has been able to compound admitted debts to the extent of Rs. 101 lakhs for an immediate payment of 8 lakhs, and the balance of 61 lakhs has yet to be settled and paid.

The sum of Rs. 4,53,938 was collected from the estates, but a large balance of Rs. 2,39,132 remained outstanding on account of Government revenue, the arrears being in some measure due to defective supervision, as one manager finds it difficult to exercise control over so large a number of separate estates. The receipts have been prejudicially affected by the lowness of prices, notably of jowari, for which it was not easy to find purchasers. The cost of management was Rs. 57,111.

In the Thár and Parkar District 2 estates were brought under management and 1 estate was returned to its owner—14 remained under management at the close of the year. Debts to the extent of Rs. 2,454 were compounded for Rs. 1,227, the sum being borrowed from Government, to whom Rs. 15,582 are owing.

CHAPTER III.—PROTECTION.

Course of Legislation.

THE Acts passed by the Legislative Council of Bombay and the Bills introduced before that body and pending at the close of the official year 1881-82 are set out in the Appendix, pages 33—36; with their objects and reasons.

Acts I. and III. of 1881 relate to the Bombay Port Trust. By the first Act a change has been made in the forms of securities and debentures issued under the Port Trust Act with the object of making them more negotiable and acceptable in the money market, and by Act III. it was sought to take advantage of the cheapness of money by authorising the Port Trust to borrow money to pay off the loan of 76 lakhs of rupees advanced by Government for the construction of the Prince's Dock. It was believed by the Trustees that they could borrow the money in the market at 4 per cent., which would effect a large saving per By the same Act a general power was given to Trustees to borrow money with the provious consent of Government for the purpose of paying off any existing or future loans when they may deem it expedient so to do. By Act II. of 1881 Presidency magistrates are empowered to try municipal cases, although as rate-payers they might be considered to be pecuniarily interested in the convictions in such cases. Under Act IV. of 1881 a system of village police and revenue officers will be legally organised in Sind, and by Act V. of 1881 Government have been empowered to lease the levy of tolls for not more than seven years. By Act I. of 1882 all special legislation on the subject of cotton frauds has been repealed. It was proposed in Bill No. 3 of 1880 to revive the law and practice as it was before the Cotton Frands Act VII. of 1878 was passed, but as His Excellency the Vicerov had declared his intention of withholding his assent from the Bill, the present Act simply repealed all special legislation on the subject. The Civil Jail Fund as a separate fund has been abolished by Act II. of 1882 in compliance with the policy to simplify the accounts and to do away with unnecessary separate funds, and by Act III. of 1882 a vaccinator may appoint an earlier or later day than the eighth day for the inspection of the child he has vaccinated.

Bill No. 2 of 1881 to amend the Bombay Hereditary Officers' Act was discussed in committee and found to be unworkable. It was

88

therefore withdrawn and a new Bill, No. 5 of 1881, was introduced for the same purpose. Under the present Act an inquiry is made regarding the custom of a watan, and the order of service is fixed, as far as possible, in accordance with the custom. But it is found that this custom deprices upon the accident of past service which may not have been rightful, and the present Bill seeks to give every person who holds not less than a 16 share of the cemoluments a right to serve in the office and vote for the appointment of a patel or other officer, and in case the privileged shareholders fail to appoint a proper person, the Collector is then authorised to make the appointment himself. Bill No. 7 of 1881 seeks to give certain powers to the police to enter the promises of wholesale dealers and seize false weights and measures in the city of Bombay. These powers are now legally exercised with respect to retail shops, and they are now extended to wholesale premises. Provision is also made in the Bill for the custody, by Presidency magistrates, of standard weights and measures.

Police.

DISTRICT POLICE.

The number of offences which the police could notice without the orders of a magistrate decreased from 61,778 in 1880 to 59,313 in 1881. The decrease is common to all the divisions of the Presidency, but is most noticeable in the Central The number of persons arrested also decreased from Division. 69,546 to 59,100, and this decrease is also common to the whole Presidency except Sind. A fraction more than half the number of persons arrested was convicted, the exact figure being 51 per cent., which is a falling off from the point of success obtained in 1880, when the percentage was 53. The highest measure of success was obtained in Sind, where the figure is as high as 67 per cent., and is an improvement of 10 per cent. on the figure obtained in 1880. In the Southern Division the success declined to 50 per cent., and it has also declined to 45 per cent. in the Central Division and to 54 per cent. in the Northern Division. These figures in themselves are not a sufficient test of the efficiency of the police, for the results, as has been remarked, very often depend quite as much on the efficiency and moral courage of the subordinate magistracy as on the discretion of the police. Local poculiarities, the character of the population and of the criminal classes in a district must all be considered. In Sind, where one clansman is always ready to bear witness for another clansman, the complainants frequently accuse not only the real culprit but all his clansmen who may be expected to bear witness for him, by way of stopping their mouths, and the result is a chaos of lies in the face of which the perplexed magistrate is obliged to give the accused the benefit of the doubt.

The initiation of proceedings in cognisable cases is also not unfrequently taken by the magistrates themselves, and it is useful in considering the action of the police to exclude such cases. The following table will show the figures and results in cases in which the police were solely responsible:—

Д тугыом.					Persons arrested.	Convicted.	Percentage Police Action.	
Northern Division		12,113	7,295	60				
		12,123	6,964	57				
		6,854	4,346	63				
		13,998	7,262	51				

It appears that while in Sind and the Northern Division the magistrates rarely take up cases themselves, the reverse is the case

Cognisable Cases. PROTECTION.

in the Southern and Central Divisions, where about as many cases are tried by the magistrates without the intervention of the police as are investigated by that body. The magistrates may refer the petitioners to the police have they de not appear to avail themselves of their rotters, and prefer to help the police by relieving them of the trouble of investigation. In such cases, if the petition discloses a prima-facie case, the magistrate is bound to proceed, and it is not until the case is tried that he has . an opportunity to sift the facts in the presence of both parties. is, therefore, only in a few cases comparatively that convictions are obtained in cases taken up by magistrates, although in the Northern Division it is remarkable that the success obtained by the police and by the magistrates (60 and 57 per cent. respectively) should be so nearly on a par. In Sind also, where few cases are taken up by magistrates, their convictions are 40 per cent., while those obtained by the police are 51. But in the Southern and Central Divisions, where the work is equally divided between the police and the magistrates, the latter have only convicted 29 per cent. of the accused in the former and 33 per cent. in the latter division; while the police in the Central Division, whose measuro of success was only 45 per cent. when the figures were taken in a lump, now show a creditable result of 57 per cent., and the police in the Southern Division a still better result of 63 per cent. The Commissioner, C. D., however, observes that it is to be feared that in most of the districts of the division there is a tendency to effect arrests in a somewhat indiscriminate manner.

Assuming that as a practical test of efficiency the success obtained by the police in convicting persons whom they have arrested on their own responsibility should be the measure of their relative success, the highest point for the year has been reached by the Belgaum and Ratnágiri Police, who obtained convictions against 76 and 74 per cent. of the persons they arrested. In Surat also the percentage was as high as 72 and in Nasik at 70.

Including the number remaining from 1880 there were 61,447 cognisable cases to be disposed of. Out of these no less than 15,700 cases were struck off the register by order of the magistrates, who considered that no crime had been committed. magistrates discharged 7,310 cases without putting the accused on their defence in a formal trial, and after a formal trial they convicted 21,987 cases and acquitted 3,334. In 530 cases the parties were allowed to withdraw their complaints, and, at the close of the year, 11,866 cases were either pending or had been undetected.

Cases struck off.

There appears to be some improvement in the random striking off of cases which used to prevail in the Northern Division, but it is said improvement is still required. In the Central and Southern Divisions more cases were struck off in the year than in 1880. The same was observable in Sind; but as no crime can be struck off the register without the order of a magistrate on the application of the Superintendent of Police, who is required to go carefully into each case before making such application, the increase must be looked upon as indicating, in the opinion of the Commissioner in Sind, a growing habit of making false complaints; while in Ratnagiri it is frequently found that complaints of so-called criminal trespass, mischief and theft are made simply with a view to get by a decision in a criminal case some better standing ground or sidence for the civil suits to follow.

The number (11,866) of undetected and partial cases is very Undetected large, and the Commissioner, N.D., remarks it is very unsatisfactory that in Kaira in every 5 cases 2 remained undetected, in the Panch Mahals and Kolaba 1 in every 3, and in Ahmedabad 2 in every 7. The results in Broach, Thana and particularly in Surat were satisfactory, but in Belgaum and Kanara the results were indifferent.

In the Northern Division there was an increase of murders and culpable homicides, but a satisfactory decrease under other serious crimes. There were 56 murders, 16 of which are attributed to intrigues with women, 4 to revenge and 13 to quarrels. In Ahmedabad there was an increase of 7 murders and in Thana 4, where there was also a large increase in culpable homicides but ' a decrease in dacoities. Robberies had increased in Surat, but had decreased in Thana and the Panch Mahals. Theft had docreased, except in Kaira.

Northern Division.

The Central Division shows an increase in cases of murder, culpable homicide and kidnapping, but a decrease in cases of dacoity, robbery, theft and receiving stolen property. were 7 cases of murder in Násik against 2 in 1880, and 14 in Khándesh, an increase of 2. Of the 56 murders, 5 were committed by robbers, 2 by poisoning, and the remaining 49 were due to other causes. Culpable homicide had also increased in Násik. Dacoities had decreased from 34 to 16. Decreases occur in the districts of Poona, Ahmednagar, Násik and Sátára, the largest being in Poona, for which 4 cases are returned against 14 in 1880. Ahmednagar shows only I case against 8, and Násik and Sátára show 4 and 1 case against 6 and 3 respectively. Robberies have also decreased in Sholapur, Nasik and Satara, but there was an increase in Poona and Ahmednagar. In thefts the offences decreased from 5,027 to 3,368, and was common to the whole division, but chiefly noticeable in Sátára.

Central Division.

Except in cases of culpable homicide, which show a decrease of 12 cases, there was an increase in serious offences in the Southern Division. Out of 50 murders, 11 are attributed to illegitimate offspring, 4 to jealousy, 3 to intrigues with women, 7 to gain and 7 to quarrels. There were only 20 culpable homicides; but in grievous hurt there was an increase of 19 cases, which raises the number to 84. In simple hurt there was a decrease of 452 cases, which is explained by the police being more discreet in taking up these cases, many of which are trivial quarrels which the people would settle amicably if let alone. * Under the new Code of Civil Procedure this offence will be removed from the cognisance of the police. Serious offences against person and property show a decrease of 167 cases, chiefly under lurking house-trespass and house-breaking and in the number of dacoities, and under minor offences against property there has been a marked decrease Southern Division.

PROTECTION.

to 41,552, which has occurred almost entirely under ordinary thefts, and is explained by the cheapness of food and the improvement in the condition of the people. The gang of Bedar dacoits which had given considerable trongler Kanara and Belgaum was broken rp, and all remains members sentenced to imprisonment. 101 cases of liquor-smuggling were defected, chiefly in Belgaum, and about 91½ gallons of liquor seized. 123 persons were arrested in connection with these cases, of whom 106 were convicted.

Sind.

Serious offences declined very considerably in Sind, except under murder and dacoities. There were 47 murders, or 3 more than in 1880, and 6 dacoities against 2. 3 of these decoities were committed by one gang of 13 men in the Hyderabad District. A pursuit was organised, but when pressed the gang separated. The police, however, tracked the principal party across the Indus and overtook 3 men, who refused to surrender, and fired on the police, who returned the fire and succeeded in shooting the leader, and the 2 others then gave themselves up. By degrees most of the remaining members of the gang were captured and sentenced to transportation. The number of cattle-thefts (2,601) was large, although less than in 1880. There has been a marked decrease in Karáchi, Hyderabad, and Thar and Párkar, the number being only 1,636 against 2,000, or a decrease of 364, but there has been an increase in Shikarpur and Jacobabad. This class of crime has always been very provalent in Sind, and the difficulties in dealing with it are very great, as the persons who lose their cattle usually prefer to recover them by an amicable arrangement, and it is only when they fail that they apply to the police.

Non-cogni-

The police were employed by the magistrates to investigate sable offences. 1,661 cases of non-cognisable offences. In these they arrested or summoned 2,490 persons, and obtained convictions against 1,189, or 48 per cent. The results are very much better in the Southern Division and Sind over the figures of 1880, but in the Northern and Central Divisions the success of the police has not been very great. The Commissioner, N.D., remarks that a very large number of the complaints is in a great measure false and only made to annoy the accused.

> Except in Sind the magistrates did not often refer non-cognisable cases to the police, and the Commissioner in Sind observes that magistrates should, as a rule, dispose of such cases without referring them for investigation, and that he has taken measures to check such needless references.

Stolen Property.

The total value of property stolen was reported as Rs. 9,58,771, of which Rs. 4,62,304 was recovered, which gives a success of 48 per cent. as against 45 per cent. in 1880. The highest measure of success, 53 per cent., was obtained in Sind, but the police has not improved upon the success which they achieved in 1880. In the other divisions the police have improved, notably in the Northern Division. There is, however, an element of chance in the percentage of recoveries. One single case, in which thieves may have got off successfully with a large boty.

destroys the average as against numbers of cases in which the police have been successful. And it has been remarked that the zeal and energy of the police in this respect, cannot be measured by statistics for it is admitted on all hands that the amount of loss is usually exaggerated, and the recovery of stolen property often depends upon a lucky find.

The only offences committed by persons who have taken to crime as a profession were the cattle-liftings which are habitually practised in Hyderabad and the Upper Sind Frontier. The exploits of the gang of dacoits and their capture have been referred to above.

Professional Crime.

The punitive police posts at Lagdana in Ahmedabad and Samarkha in Kaira have been withdrawn, and the force of 6 officers and 29 men quartered in the villages of Gungali, Sinaj and Vithalpur in Ahmedabad was reduced to 2 officers and 5 men. In July 1881 a punitive post of 2 officers and 11 men was imposed on 25 villages of the Shahapur Taluka in Thana on account, of the villagers being in the habit of harbouring dacoits.

Punitive Posts.

A punitive post was established at Devláli in Ahmednagar in consequence of the suspicious conduct of the inhabitants of the village in connection with serious crimes which had occurred in the district. A brutal murder of 5 persons by some of the people of Jadhowwádi in Sátára made it necessary for a post to be stationed there. 2 posts in Násik, 1 in Poona, and 4 in Sátára were withdrawn.

Police Strength.

The total strength of the police was 18,134 men. In proportion a far greater number of men were stationed in the Northern Division, where there is 1 policeman to every 3 square miles; in the Contral Division it is 1 to every 63 square miles, and in the Southern Division it is only 1 to every 7 square miles. In Sind, where there is so much desert, the proportion is 1 to every 11 square miles, but as the population is sparse the proportion to the population is 1 policeman to 577 inhabitants. the Northern Division it is 1 to 818, in the Central Division 1 to 945, and in the Southern Division 1 to 1,117 inhabitants. Besides the regular police duties of the force which occupy 11,934 men in the districts, the police furnish guards over jails 752 men, over treasuries and lock-ups 2,451 men, and 2,513 men are engaged on town and cantonment police duties. The Commissioner, N.D., observes with reference to the village police, a hereditary body quite distinct from the regular police, that "the question of the village police is most urgently calling for attention. The actual importance of the village police cannot for one moment be overlooked. Without the aid of the village police not a single offence could be traced out. The village police are the real backbone of the detective police. They know all that is going on, and know every one in the villages. The village police are, however, now so wretchedly paid and so entirely without organisation that it is lamentable to think how the country is losing the services of this most valuable body of men." In Sind, village police do not exist, and the work of detection and repression of crime falls upon the regular police, who, not

Police Guards.

Village Police. Chap. III. 94 PROTECTION.

> being on the spot when a crime is committed, and not having the local knowledge that village police must have, are far less favourably situated for the detection of crime. An Act has lately been passed to remedy this defect and to provide for the appointment of village officers in Sind.

8,928 mon of this force were armed chiefly with sapper carbines

Arms.

Conduct.

and 9,120 were provided with batons and swords. 26 officers and 480 men were dismissed the service, the largest number (14 officers and 214 men) being dismissed in Sind. 464 officers and 2,308 men were punished departmentally by magistrates. In Belgaum one-third of the force was punished; they had become very lax in discipline, and it was necessary to treat them somewhat severely. On the other hand a large number of men were rewarded by promotion or by money rewards; but it is believed that the former include in many cases promotions in the ordinary course without any special service. It is often found impracticable to reward men by promotion if vacancies are not available, and the Commissioner, N. D., suggests a system of good-conduct stripes carrying

Education.

Education made very little progress in the force. In Ahmedabad, Surat and Broach the percentage is high and also in Ratnágiri, but in other districts it continues low, especially in Sind, where only 14 per cent. are able to read and write. In the other divisions the proportion is about one-third of the force who are educated to two-thirds who are illiterate.

a small addition to the pay of the rank.

Caste.

The bulk of the force consists of Mahomedans, who greatly preponderate in Sind and the Northern Division, but in the Central and Southern Divisions they are employed in about an equal number as the Maráthás. In all there were 7,717 Mahomedans employed in the police including 1,207 officers. The Maráthás numbered 4,471, including 708 officers. There were 1,023 Bhils employed almost exclusively in the Northern and Central Divisions and 537 Kolis employed exclusively in the Northern Division. Besides these there was a number of Bráhmans and Rájputs and Hindus of other castes, but who were numerically not very strong. The Commissioner, C. D., recommends the enlistment of a larger number of Rámosis, Bhils and Mángs to give employment to men who for want of it are apt to give trouble by occasionally disturbing the public peace.

Accidental Deaths. There were 705 cases of suicide; the mode most in favour appears to be by drowning, but in Sind death by hanging is apparently preferred. There were 1,958 accidental deaths by drowning, and the Commissioner, C. D., proposes to float a gourd in each well attached by ropes to the sides. If a person fell in he probably would be able to clutch the rope and support himself by the gourd until assistance could be given. Death by snake-bites occurred in 1,196 cases and by wild beasts in 84 cases. Accidental deaths from other causes were reported as 1,375 in number.

Superintendents. In a large number of cases the superintendents visited the scene of any serious crime immediately on receiving the report, but in many cases this duty has been omitted, especially when information was received of the capture of the offenders. The Commissioner in Sind, however, observes that in some cases the superintendent's presence may not be necessary as when a murderer is arrested red-handeu or a thief caught with the property in his possession just after the commission of the offence, but the mere fact that some accused person has been arrested, should not deter the superintendent from visiting the scene of a crime, as many cases fail through the ignorance or carelessness of the police in preparing them and getting together the necessary evidence.

In closing this notice it would be right to mention that the year was one of general prosperity to which in a great measure was due the more peaceable tendencies of the population.

BOMBAY CITY POLICE.

The City and Water Police in Bombay brought up 21,317 persons to the Presidency magistrates for trial, and of these 20,085 were convicted or 94 per cent., 1,181 persons were released and 25 were committed to the High Court. Including the persons' brought up by the municipality or under summons and warrants the total number charged before the magistrates was 31,399, including 18 persons under trial at the close of 1880, which is an increase of 3,693 persons as compared with 1880. The chief increase is in the offences of abusing and torturing animals, offences under the Conveyance Act, breaches of the Contagious Diseases Act, nuisances and municipal offences. The municipal officers prosecuted 4,250 persons chiefly for refusing to take out licenses for offensive trades, for places to store wood, hay, &c., and 222 persons were charged with furious or negligent driving, of whom 191 were convicted. For torturing animals 2,803 persons were prosecuted, and in all the cases, except 16, the parties were punished,—half the fines, Rs. 2,466, being paid to the society for the prevention of cruelty to animals.

347 seamen were charged before the courts for refusal of duty on boardship and 263 were punished; in most of the other cases the men consented to return to their work. For drunkenness 4,578 persons were placed before the courts; they were mostly natives, only 224 being Europeans, and for disorderly behaviour in the public streets 2,252 persons were convicted.

There were 4 cases of murder, 3 of which were convicted, and 2 cases of culpable homicide not amounting to murder. Cases of grievous hurt, and especially of simple hurt, show a considerable increase; but this is not the case with regard to thefts, which numbered 2,139 cases, of which 701 remained undetected. 78 persons were punished for house-breaking.

The number of juvenile offenders increased from 781 to 1,026 in the year. 949 were convicted, of whom 99 were sent to the Reformatory, 86 were imprisoned, 145 were flogged, 490 were fined, and 129 were admonished and discharged.

The value of property stolen is stated to be Rs. 1,42,060, of which Rs. 72,691 was recovered by the police, or 51 per cent. The largest case of thest was one of Rs. 10,000, and the accused having died in jail the police were unable to recover any portion of the stolen property.

Chap. III.

PROTECTION.

56 fires occurred in the city, in which no lives were lost, but Rs. 77,800 worth of property was destroyed.

There were 77 cases of suicide, and most of the deceased destroyed themselves by drowning or poisoning. Bosides these the Coroner held 309 inquests. Deaths were caused chiefly by drowning or falls from buildings and injuries from carts and carriages. 10 deaths were caused by accidents from the railway, 8 from machinery, and 11 by accidents on boardship.

Attention has been drawn to the frequent adjournment of cases for a week or more generally for the convenience of counsel in large practice, and orders have been issued for the prevention of the delay caused by these adjournments.

The strength of the force was 324 Government and 1,130 municipal police; 50 men were dismissed and 26 resigned.

VAGRANTS.

71 persons were convicted as vagrants in the city of Bombay and 16 persons were taken up under the Vagrancy Act in the districts. Of these 83 persons were sent to the work-house and 4 were sent to places where they would be likely to find employment. Including 14 persons in the work-house at the beginning of the year the total to be accounted for was 97, of whom 12 remain on the roll at the end of the year. Employment was found for 47, chiefly on boardship or in the railways, 9 were sent to other ports, and 5 returned to their friends. Desertions were more frequent, and only 9 out of 26 were apprehended by the police, 4 returned of their own accord, and 13 remained at large. The cost was Rs. 7,727, or an average of Rs. 55 for each vagrant.

RAILWAY POLICE.

The G. I. P. Railway, the B. B. & C. I. Railway Companies and the Rájputána-Málwa State Railway have each a distinct body of police to guard the traffic and to take notice of offences committed within railway limits. The Dhond and Manmad chord line was added to the charge of the Superintendent of the G. I. P. Railway Police in April 1881.

The railway police were employed in 711 cognisable cases and 338 non-cognisable cases, in which they arrested 1,171 persons, of whom they succeeded in convicting 903, which gives the high percentage of 77. On the G. I. P. line the number of offences was about the same as in 1880, although there was a considerable decrease in thefts, but on the B. B. & C. I. Railway the number of thefts increased as well as crime generally. On the Rajputana line crime decreased. The value of stolen property was stated to be Rs. 37,047, of which Rs. 15,789 was recovered, or 42 per cent., the success obtained by the B. B. & C. I. Railway Police being exceptionally bad, owing to 3 or 4 large thefts in which a large amount of property was stolen, which have not been detected. Theft of grain by throwing bags from open wagons in transit still continues, but is small compared to the very heavy traffic, as on the G. I. P. line only one bag in every 40,000 was stolen. This company paid Rs. 2,404 as compensation for loss of grain, but

the amount realised by the sale of grain sweepings and refused goods was Rs. 17,144. The pickpockets who reside in Poona, Nagar and Satara still frequent the railway, and on one occasion the carpet bag of a passenger containing Rs. 855 was stolen when he was travelling only a short distance from Nagar. In another case a bar of silver worth Rs. 3,000 was stolen by some Panjábi pickpockets from a passenger who had ten other bars of the same value with him. On the Rajputána Railway 7 persons out of a gang of pickpockets from Panjáb were arrested by the detectives, and the remainder of the gang then left the line. Several robberies at night were also reported on this line, and the police now travel in charge of trains.

56 offences against railway laws were reported, and 6 of them were cases of placing obstruction on the line. Half of these were placed by children and were not done with any criminal intent. Three were serious cases, but no injury resulted to the train. In one case an obstruction was placed on the line with a notice that if the writer's claim against a permanent-way mukadam was not settled, further damage would be committed. The man was arrested and sentenced to five years' rigorous imprisonment.

The combined strength of the railway police is 143 officers and 913 mon maintained at a cost of Rs. 2,33,751. The cost of the police on the Rajputana-Malwa line is defrayed by Government, but the private companies pay a share of the cost of the police for the protection of their own property. The force is not provided with fire-arms, except a few men on the B. B. & C. I. Raiway and on the Rajputana line to guard treasure. 68 men were dismissed and about 250 fined, the punishments being far more frequent on the B. B. & C. I. line. 84 men resigned and 13 men are said to have deserted. Somewhat less than half the force is able to read and write, and classing them by their religion 53 officers and 306 men were Mahomedans, the rest being chiefly Hindus of the lower castes.

CHEMICAL ANALYSIS.

The total number of analyses and examinations carried out during the year under review was 1,257 against 1,994 in the proceding year. The decrease is due to the large number of samples of commissariat stores examined in 1880-81.

There has been a steady diminution since 1877-78 in the number of medico-legal cases sent to the Chemical Analyser for opinion and report. The number was 477 in 1877-78, 392 in 1878-79, 325 in 1879-80, 281 in 1880-81, and 245 in 1881-82. The decrease is mainly due to the fact that a smaller number of cases of real or alleged poisoning of human beings and of cattle is annually referred for report. As was the case in 1880-81, the largest number of medico-legal cases, viz., 28, was referred from the Poona District, 21 were referred from Násik, 20 from Dhárwár, 19 from Kaládgi, 18 from Thána, 17 from Sátára, 15 each from Khándesh and Sholápur, 14 from Bombay, 13 from Ahmednagar, 11 from the Central Provinces and Berárs, 8 from

Sind, and 7 from Baroda and other Native States. The smallest number-1 each-was from Kánara and Panch Maháls.

The number of cases of articles supposed to be stained with blood or other animal fluids sent for examination during the year under report was the same as last year, viz., 31. Blood or other fluid was detected in 22 of these cases,

The number of cases of suspected cattle poisoning referred to the Chemical Analyser fell to 62 and and that of cases of suspected poisoning of human beings fell to 152. In no year since 1873-74 has the number of cases of cattle and human poisoning referred to the Chemical Analyser for report been so small as during the year under review. Poison was detected in 39 out of the 62 cases of alleged cattle poisoning, and in 71, or less than one-half, of the cases relating to the poisoning of human beings. The number of persons who appear from the reports sent to the Chemical Analyser to have been poisoned was 67, of whom 36 These numbers are less than those in any one of the last seven years. Cases of cattle poisoning were most common in the districts of Nasik, Sholapur and Poona, while cases of poisoning of human beings occurred to the largest extent in the last mentioned district and in the districts of Kaladgi, Satara and Thana.

42 samples of potable water forwarded from Aden, Ahmedabad and several other stations, were analysed, of which 19 were found to be bad, 17 good and 6 doubtful.

Besides examining 70 samples of petroleum, careful experiments were made with the view of ascertaining whether the flashing point of petroleum is affected by the temperature of the atmosphore and other conditions.

Criminal Justice.

The criminal courts in the Presidency were the following:—

Regulation Provinces.

The High Court.

The courts of 19 Sessions Judges and Assistant Sessions Judges.

The courts of 17 district magistrates.

The courts of 78 first class magistrates.

The courts of 163 second class magistrates.

The courts of 206 third class magistrates.

The police patels numbering about 20,727, who exercise a small criminal jurisdiction under Bombay Act VIII. of 1877.

In Sind.

The Sadar Court.

The courts of 3 Sessions Judges.

The courts of 5 district magistrates, of whom 2 have been invested with special powers as Deputy Commissioners under Section 36 of the Code of Criminal Procedure.

The courts of 20 first class magistrates. •

The courts of 58 second class magistrates.

The courts of 51 third class magistrates.

In the Panch Maháls.

The court of the Sessions Judge, who is also district magistrate.

The courts of 2 first class magistrates, of whom one has the jurisdiction of an Assistant Sessions Judge.

The courts of 5 second class magistrates.

The courts of 3 third class magistrates.

The police patels—their number is not stated.

The cost of the various courts is shown to have been Rs. 10,57,319, and the receipts from fines, court fees, &c., amounted to Rs. 3,05,843.

The total number of offences reported during the year was 90,562, but of these only 67,984 were returned as true, and it appears that crime was less prevalent than during the year preceding. The offences affecting life decreased by 88, and the offences of theft, extortion, robbery and dacoity, criminal misappropriation, criminal breach of trust, and receiving stolen property, by which perhaps the criminality of the country can best be gauged, decreased respectively by 965, 9, 71, 116, 122 and 334. As in the year 1880 the proportion of offences to population was largest in the Karáchi District. This year the proportion was smallest in Ratnágiri, the second place being taken by Kaládgi.

smallest in Ratnagiri, the second place being taken by Kaladgi. Of the 67,984 offences reported as true, 62,705 were actually brought to trial. The proportion of acquittals to convictions is large in cases of hurt, criminal force, cheating, mischief, criminal trespass, marriage offences, defamation and criminal intimida-

tion, and this is probably due to the fact that a large number of charges under these heads arise from quarrels which are compromised before the case comes on for trial. In offences affecting public health and offences falling under time taws, of which the greater number are nuisances under the Municipal and Police Acts, the percentage of convictions to a quittals is high.

The number of miscellaneous cases which came before the courts in their criminal jurisdiction was 1,473; the most numerous were maintenance cases, cases regarding security for good beha-

viour, and cases relating to forfeiture of bail.

The actual number of persons under trial during the year was 108,323. Of these 76 died or escaped, 55,681 were acquitted or discharged, 50,950 were convicted, and 1,616 persons remained under trial at the close of the year. The percentage of the two years is as follows:—

	1880.	1881.	
Died, escaped of transferred Discharged or acquitted Convicted Remaining under trial	·9 47·5 50·3 1·3	07 51.40 47.03 1.50	

The High Court in its original jurisdiction disposed of 30 cases during the year, involving 44 persons, of whom 19 were acquitted or discharged and 25 were convicted. As a Court of Reference 54 cases involving 85 persons came before it, and the proceedings ended in the acquittal of 3 persons and the conviction of 74. Of these 54 cases, 49 were referred under section 287 of the Criminal Procedure Code for the confirmation of sentence of death and 5 came before it under section 263, being cases in which the Sessions Judges differed from the finding of the jury.

The Sadar Court in Sind, as a Court of Reference, disposed of 20 cases in which 23 persons were accused. Of these 2 were acquitted and 21 were convicted. All these cases were referred for confirmation of the sentence of death.

In the Courts of Session 1,841 persons were under trial against 2,298 in 1880. Of the former number 8 died or escaped, 718 were acquitted, 935 were convicted, 93 were referred to the High Court, and 87 remained under trial at the close of the year.

The magistrates of the various classes dealt with persons under trial as shown in the following comparative table:—

1880.	1881.
115,038 624 53,822 55,221 4,004 1,367	106,560 67 53,990 47,676 3,315 1,512
	115,038 624 53,822 55,221

The village courts or police patels had before them 3,178 persons accused of petty thefts and other offences. Of these 949 were acquitted or discharged, 2,219 were convicted, and 9 persons remained under trial at the end of the year.

The total number of vitnesses examined during the year was 227,435 against 248,780 if 1880. The average duration of cases in all the courts in the Presidency was 6.09 days. In the courts of the stipendiary magistrates, by whom the bulk of the criminal work is performed, the average duration of cases was 6.3 days.

The High Court on its Original Side passed one sentence of death, and as a Court of Reference confirmed 32 sentences. The Sadar Court in Sind confirmed death sentences in 14 cases. The total number of sentences of death passed or confirmed by the High and Sadar Courts was, therefore, 47 compared with 70 in the preceding year.

174 persons were sentenced to transportation, 14,348 persons to imprisonment, and 1 sentence of forfeiture of property was passed. 38,378 persons were sentenced to pay fines, and Rs. 2,69,759 were recovered. In 1880, 42,653 were sentenced to fine and Rs. 2,75,838 were realised. Rs. 16,557 were paid away as compensation to complainants. 1,062 persons were sentenced to whipping, and 637 persons were ordered to give security to keep the peace or for good behaviour.

321 appeals from convicts were before the High Court from the decisions of the Sessions Courts and the Presidency magistrates. In one case the appellant died, and the appeal abated. In 88 cases the appeals were rejected without calling for the papers. In 74 cases the sentences were confirmed after calling for the papers; in 4 the sentences were enhanced; in 87 the sentences were modified, and in 29 they were reversed. 38 appeals were pending at the end of the year.

12 appeals by Government against judgments of acquittals by subordinate courts were before the High Court during the year. 4 of these were rejected without calling for papers; in 2 cases the acquittals were confirmed after calling for papers; in 4 cases the acquittals were reversed and the accused were convicted, and in one case a new trial was ordered.

727 cases came before the High Court as a Court of Revision. In 394 cases the decision of the lower court was left unaltered; in 157 cases the sentences were enhanced or modified; in 106 cases the sentence was reversed; in 14 cases the proceedings were quashed; in 33 a new trial was ordered, and 23 cases remained pending at the end of the year.

Before the Sadar Court in Sind there were 148 appeals and 795 cases for revision, and in only 119 cases were the sentences reversed, while in 18 cases a new trial was ordered.

The Courts of Sessions had before them 1,141 appeals from the decisions of first class magistrates or Assistant Sessions Judges. They disposed of all except 18, which were pending at the end of the year, in the following manner:—

Appeals

		***		•••	12
Rejected or confirmed	•••	•••	·	•••	810
Sentence enhanced or modified		•••	•••		111
Sentence reversed, proceeding	s qu	ashar o	new.	trial	
Ordered		•••	T		190

The Sessions Courts also reviewed the proceedings of magistrates in 269 cases. In 13 cases the papers were referred to the High Court; in 8 cases, in which a complaint had been dismissed on insufficient grounds or an accused person had been discharged improperly, a further enquiry was ordered, or the accused was directed to be committed; in one case a magistrate's order refusing bail was set aside, and in one an order of a magistrate relating to the disposal of property was annulled.

There were appeals from 1,842 persons before the district magistrates and other magistrates with appellate powers. Of these 7 died or escaped: the appeals of 95 were rejected, in 910 cases the sentence was confirmed; in 61 cases the sentence was enhanced; in 203 it was modified; in 512 it was reversed; in 18 the proceedings were quashed, and in 5 a new trial was ordered. 31 appeals were pending at the end of the year.

The result of appeals, whether to the Sessions Court or to the magistrates with appellate powers, does not show any very remarkable variation in the two years. Sentence was enhanced in 86 cases on appeal or in about 26 per cent. of the total number of appeals disposed of.

Juries.

On the Original Side of the High Court all cases coming before the court in its Ordinary Criminal Jurisdiction are tried by special or common juries constituted of 9 jurors. Altogether 27 cases were tried by jury, in 26 of which the Judge approved and in one of which he disapproved of the verdict.

In the Mofussil the Courts of Session try all criminal cases (not falling under the special procedure provided for the trial of Europeans and Americans) with the aid of assessors, except at Poona, where juries consisting of 5 jurors are employed for the trial of the more serious offences. 682 cases were tried with assessors, in 467 of which the Judge agreed with them and in 198 of which he differed from the finding of one or both of them. At Poona 48 cases were tried by jury. In 42 cases the Judge approved of the verdict and in 6 he disapproved of it.

A general review of the proceedings of the year shows that whether the crime of the country is tested by the number of offences reported or by the number of persons brought to trial or by the number of persons convicted and sentenced, there is some improvement manifest compared with the previous year. It is satisfactory to observe that not only has the total number of offences declined, but that there has also been a decrease in the number of murders, dacoities, robberies and other violent crimes which particularly indicate a spirit of lawlessness among the people. This improvement can only be attributed to general prosperity throughout the country.

Prisons.

The only central jail is at Yerowda near Poona. A district jail is established almost at every chief town of i "strict and at Aden, and there are extra-mural gangs employed upon the works at Ashti, Gokák and Nára in Sind. Besides these there were 78 subordinate jails placed at different points all over the Presidency for the confinement of persons sentenced to short terms of imprisonment.

In all there were 18,025 persons admitted to jail in 1881, and

	YEAR.	Number unprisoned.
1874 1875 1876 1877 1878 1879 1880 1881		 • 19,758 19,027 20,499 40,728 34,860 33,284 22,914 18,025

as this number is less than the number of admissions in any of the three years preceding the famine, it may be assumed that crime has returned to its normal state. In 1880 the number of admissions was 22,914 and the decrease in 1881 is common to all the jails. Including the number in confinement at the beginning of the year, the total number was 28,451 and the average daily number in confine-

mont was 9,734 against 11,236 in 1880. The number executed 135 prisoners were transported, 410 died and 35 was 52. The total cost was Rs. 6,11,577, which is an average of escaped. Rs. 62-1-10 per head; but deducting Rs. 2,03,721, the actual cash profits earned by convict labour, the net cost was reduced to Rs. 4,07,856, or an average of Rs. 42 per head.

Registers to record the good conduct of the prisoners are now Good-conduct kept in every jail, and as they clearly understand that good conduct whilst in prison will meet with a certain reward, there seems little doubt that this inducement to good behaviour will have a most beneficial effect. Already 212 prisoners have carned their release in 1881 under the remission rules against 104 in 1880, and this increase has occurred although there has been so large a decrease in the number of prisoners confined in jail.

5 prisoners were released on account of sickness and 25 on other grounds: of the latter 17 were released on ticket of leave, 3 on account of extreme old age and infirmity, 3 were juveniles from the Poona Jail released for good conduct and for their ability to earn their own livelihood by means of the trade taught them in jail, 1 was granted a conditional pardon to assist the police in the apprehension of dacoits, and I female prisoner, convicted of the murder of her child 18 months old, was released from the Kárwár Jail on the medical report that she might have committed the murder whilst under the delirium of fever.

Registers.

PROTECTION.

Europeans,

226 Europeans were admitted to jail, of whom 189 were confined in the Bombay jails. The number is 67 more than in 1880, but is very much lower than the figures in previous years. The offences, however, were not very serious, 36 per cent. being confined for offences under the Shipping A/t or military and naval offences.

Juveniles.

The number of juvenile offenders admitted to jail has also decreased. For the last four years the figure has been-

1881	•••				1879			740
1880	•••	,	382	1	1878	•••	•••	813

The ratio of offences committed by the different classes to each thousand of the free population is-

Christians	•••		3.60
Mahomedans			1.54
Hindus	•••		0.69
Jains		••	0.17

Of the offences committed by Christians 45.3 per cent. were by Europeans, 2.2 per cent. by Eurasians, and 52.5 per cent. by Native Christians.

The terms of imprisonment may be classed as under:—

Under 6 months	71.5 per cent.
Above 6 months and not exceeding 1 year	12.1
One year and not exceeding two	9.4
Two years and not exceeding five	3.6
Above five years	· 8
Sentenced to transportation	2.0
Sentenced to death	·6

Re-convictions.

The proportion of re-convicted prisoners to the total admissions into jail has been increasing from 11.2 per cent. in 1879 to 12.5 per cent. in 1880 and to 13.9 per cent. in 1881. This under normal conditions might imply that jail discipline was gradually losing its deterrent effects, but the numbers in jail of late years have been greatly swollen by abnormal causes, and now that crime is apparently returning to a normal state the proportion is nominally higher. As crime generally decreases so does the proportion of offences committed by old offenders increase, and it is also probable that old offenders are more carefully recognised of late than in former years. The largest ratio of re-convictions to admissions occurs in Bombay.

Escapes,

There were 31 escapes against 50 in the previous year, of which 5 were from inside jail walls and 26 from prisoners working outside; 12 were recaptured and 19 were at large at the close of the year. The prisoner who escaped from Yerowda contrived to conceal a nail with which he picked the lock of his cell and scaled the wall by means of two capstan bars (which were used for drawing water) lashed together, leaving a dummy made from his bedding in the cell. The 3 who escaped from Shikarpur were all juvenile offenders. They managed to dig a hole under the threshold of the door of the barrack with a piece of stick, and having got into the outer jail got on the wall by means of a plank and let themselves down by a piece of rope which they procured from the carpet factory. They were, however, recaptured on the next day. There was only one escape from the Nára Gang and 2 from Gokák, and none at all from Ashti. From Hyderabad there were 9 escapes from a gang employed on canal clearances in thick jungle, where there were peculiar facilities for concealment.

The total number of nunishments inflicted during the year was Punishments. only 2,434 against 4,583 in 1880, and implies a great decrease in the number of jail offences: Corporal punishment was administered in 806 cases. It is not considered advisable to resort to it except in extreme cases when other means of punishment have failed.

Instruction.

The daily average under instruction was rather higher than in 1880, being 305 against 294. Out of the number released, 160, who had been under instruction, 112 had entered the jail entirely ignorant, but only 15 left the jail in the same state of ignorance in which they entered it. Large results cannot be looked for in jails where not only do the prisoners have but little time for study, but the majority are adults to whom learning to read and write is uninteresting and irksome. But the instruction given to juveniles with the aid of the trade taught them tends, to enable them to carn an honest livelihood.

> Subordinate Jails.

About the close of the year several important changes were made in the number and classification of subordinate jails in Sind, and 22 were abolished or converted into lock-ups for the detention of under-trial prisoners. The total number of such jails has, therefore, been reduced from 78 to 56. In all 4,194 prisoners were admitted to subordinate jails, and the daily average under confinement was 324. With the exception of a few jails the daily average confined was below 10 in each. These figures are, however, included in the second paragraph above. The daily average of prisoners detained pending trial was 112.

> Civil Prisoners.

2,466 civil prisoners were confined during the year against 2,348 in 1880. 2,418 were released and 4 died. The cost was Rs. 8,423, and the average cost per head was Rs. 53-10-6.

Cost.

The gross cost of maintaining the criminal jails decreased with the decrease in the number of prisoners to Rs. 6,11,577 from Rs. 7,59,371, but the cheapness of food also materially influenced the reduction; the cost per head for rations alone being reduced to Rs. 23-12-4 from Rs. 30-12-8.

Rations

The average cost in extra-mural gangs is necessarily higher than in jails, chiefly on account of the more liberal scale of diet supplied to them and partly to the isolated position of the work which obliges the greater part of the rations to be brought from long distances. The greatest average cost per head was at Nára Rs. 45-8-5 and the lowest Rs. 11-6-6 at Kaládgi. The rates at Yerowda and Karáchi are somewhat high compared with the neighbouring jails, but in each of these jails a few European prisoners are confined. There is no garden attached to the Karachi Jail, and vegetables have, therefore, to be purchased in the market, which also adds to the cost. This is also the case at Bombay and Aden. An extra allowance of 4 ozs. grain was given to prisoners on extra-mural labour in the Hyderabad Jail and 2 ozs. to those in the Tháne, Jail. 'The diet of long-term prisoners in Poona and Ahmedabad was also increased.

Guards.

There has been an increase of 2 siledárs and 29 sepoys to the guard at Nára, as the strength of the gaig has been increased from 400 to 600. This and other reasons have caused an increase in the cost of guards, and hospital charges decreased owing to cheaper food and smaller number of sick. The cost of clothing was reduced to Rs. 2-10-2 per prisoner; but this is exceptional, as no clothing was required at Gokák and Belgaum.

Average Cost.

On the whole the average cost of Rs. 62-1-10 per prisoner is the lowest at which a prisoner has ever been maintained in this Presidency. The average for subordinate jails is higher than for large jails, as most of these jails are too small to derive any advantage from a contract system for prisoners; but they are cheaper as regards the cost of guards, because the district police furnish the guard, and no charge is made on this account.

Employment.

Deducting the sick there was a daily average of 8,656 persons available for hard labour as compared with 9,809 in the previous year. 3,081 were employed in manufactures, 2,154 on public works, 910 on grinding grain and proparing articles for jail use, and 744 on gardening. There were, besides, 1,102 persons employed as prison officers or jail servants, 470 on alteration and repairs to jail buildings, and 195 on unremunerative labour such as shot drill and the treadmill in the Bombay jails.

Profits.

After deducting the expenditure on account of tools and seeds the profit on the sale of garden produce to the public amounts to Rs. 4,852, while the value of vegetables supplied to the prisoners was Rs. 13,265. The value of convict labour employed on repairs to jails is estimated at Rs. 22,734 and the profits on manufactures made for the use of jails at Rs. 23,019. The profit made by sales of manufactures to the public was Rs. 55,637, which, if added to the estimated profits referred to above, would give a credit of Rs. 78,656 in favour of manufactures.

The amount earned by the extra-mural gangs was Rs. 1,28,488. There was a decrease at Ashti accounted for by the decrease in jul strength and also by the Ashti Tank and canal works being further away from the Ashti Jail, which reduced the number of working hours and earnings, and in addition a large number of men were hired by the Irrigation Department at the low figure of 2 annas per day per convict. The total amount earned by the Nára Gang was Rs. 63,500, and after deducting Rs. 62,227, the cost of their maintenance and guards, the net profit was Rs. 1,273. This is the first time such a result has been obtained in any jail or gang in this Presidency, and reflects great credit on the superintendent of the gang. The gang is now 800 strong, and is employed on the protective embankment.

Net Cost.

Deducting the actual profits realised by convict labour represented by money paid into the treasury, the net cost to Government has fallen from Rs. 5,53,912 in 1880 to Rs. 4,07,856 in 1881, giving a total saving of Rs. 1,46,056, while the net cost per prisoner has been reduced from Rs. 49 to Rs. 42, being a decrease of Rs. 7 per head. If this is thought too high it should be remembered that there is always a large number of sick, old and infirm prisoners in jails besides women, juveniles and short-

term prisoners sentenced for a few days only; who cannot possibly be made to earn anything like the cost of their maintenance; there is also a heavy expenditure for guards and establishment required to maintain security and discipline in the jails. would also appear that although the cost of maintenance may be high in Bombay compared with other provinces in India, the proportion of profits earned in 1880 was also the best with the exception of Bengal.

There was overcrowding at the beginning of the year in some of the jails, but not to any great extent, nor for any considerable This was relieved by the transfer of prisoners to gangs or other jails where there was accommodation or by using tents or temporary sheds. In all 7,371 prisoners were admitted into hospital, and the daily average sick was 309 against 436 in 1880, due to less numbers in confinement. The number of deaths also fell to 406 in large jails, which is 1.4 per cent. of the total number of prisoners. The outbreak of cholera in some jails caused 31 deaths, and in Karáchi several prisoners died of measles. Shikarpur the extreme variations in the temperature of the day and night, more especially towards the early morning, caused much sickness and death, and straw pillows and jungle grass sleeping mats instead of date mats have been issued for greater warmth. The health of the prisoners at the Nára Gang was very good from January to September, but since the arrival of the flood water, fevers and lung affections prevailed. 'Counting all jails, 103 prisoners died of dysentory and diarrhea, 74 from respiratory diseases, 52 from fevers, 31 from cholera, 27 from general debility, and 125 from other causes. As was the case in 1880, nearly half the total number of deaths occurred amongst prisoners in the first six months of their imprisonment.

Out of 16,544 prisoners discharged during the year, 8,710 or 53 per cont. gained weight, 6,451 or 39 per cent. lost weight, and 1,383 or 8 per cent. remained stationary.

There are two juvenile prisons, one at Poona and one at Shikarpur. A complete separation of the juveniles from the adult prisoners confined in the Poona Jail has been effected by setting apart six barracks together with corresponding workshops for their use, and the juvenile male prison is now quite distinct from the rest of the jail, and is capable of accommodating 94 boys. In the Shikarpur Jail all the boys who are above 18 years of age are entirely separated both day and night from the others. 38 boys were admitted during the year, 7 were discharged, and the daily average in confinement, including those in jail, at the beginning of the year was 117. 3 boys escaped from Shikarpur as mentioned above, but were recaptured, and 5 died at Poona. The boys are usually sentenced to imprisonment for two years, but sometimes for longer terms. There were 8 re-convictions compared with 18 in the previous year, and out of these 8 there were 3 re-admitted into the Poona Juvenile Prison, 2 of whom had only been 3 months out of jail and the third for 21 years. This boy when discharged had been taught up to the second standard, but on re-admission he was placed in the first standard, Vital

Juvenile Prisons.

108

Chap. III. PROTECTION.

> as he had forgotten all that had been taught him. The conduct of the boys was excellent and the number of boys punished was only 4 in Poona.

The school-master teaches the boys for three hours in the morning and three hours in the afternoon, and 69 boys passed examination in all subjects at the inspection by the Education Department. At Poona 28 boys were employed as smiths, 34 as carpenters, 25 as weavers, 10 as caneworkers and book-binders, and 11 on coir-matting and French-polishing. Several of them can carry out orders very fairly without assistance. At Shikarpur the boys were taught weaving, carpet-making, pottery, reed-work and carpentry. When questioned whether they would carry on these trades when released, they replied they would not, because weaving and carpet-making require capital, and pottery and reedwork are the occupations of the lower castes. They are now taught carpentry and blacksmith's work, a knowledge of which would be useful even if not followed as a means of livelihood. It is suggested that they should also be taught agriculture, as most of the boys belong to the cultivating class.

Inquiries have been made whether the juveniles when released follow the handicrafts taught to them in jail, and it appears that out of 63 boys not one of those who could be traced follows the art which he was taught. Nothing could be learnt about 41 boys, but of the others 9 had been returned to jail, 3 were servants, 5 were labourers, 2 were cultivators, 1 was a beggar and I was a thiof.

The total cost of the Shikarpur Jail is stated to be Rs. 1,729, but information is wanting as to the cost of the Poona Juveniles' Jail. The amount earned by the labour of the juveniles was Rs. 1,024 in Poona and Rs. 42 in Shikarpur.

The health of the boys was fairly good, but, as already stated, 5 boys died at Poona.

Civil Justice.

There has been no material variation in the number or constitution of the civil courts by which, justice has been administered in the Bombay Presidency.

In the Regulation Provinces all the courts are subordinate to the High Court, which also exercises Original Civil Jurisdiction within the town and island of Bombay in all matters not falling within the jurisdiction of the Court of Small Causes.

Subordinate to the High Court are the several courts mentioned in this para., viz., the Presidency Small Cause Courts and the courts of 11 District Judges and 3 Senior Assistant Judges who exercise in civil matters the full powers of a District Judge. In each district the District Judge exercises a general superintendence over the subordinate courts, and hears appeals from their decrees in suits not exceeding Rs. 5,000 in value. The 5 District Courts of Small Causes, 17 Subordinate Judges of the First Class who have original jurisdiction in all suits of whatever amount, 91 Second Class Subordinate Judges who have jurisdiction to try all suits in which the value of the subject-matter in dispute does not exceed Rs. 5,000, and 5 jághírdárs or inámdárs with the jurisdiction of Second Class Subordinate Judges. were in the collectorates of Poona, Sholapur, Satara and Ahmednager 136 village munsifs appointed under the Dekkhan Agriculturists' Relief Act to dispose of petty suits up to Rs. 10 in value. The number of conciliators under the same Act amounted to 313. Their functions may be said to consist in endeavouring to ring disputants to agree either to an amicable settlement or to a reference of their quarrel to arbitration. No suit to which an agriculturist is a party, who resides within any local area for which a conciliator has been appointed, may be entertained without a certificate that conciliation has been tried. The cantonment magistrates have a jurisdiction within their cantonments in suits up to Rs. 200, and the mamlatdars have jurisdiction to entertain suits in cases where the possession of immoveable property is in dispute.

The Sadar Court in Sind is presided over by a Judge who is also Judicial Commissioner, and performs the functions of a High Court on its Appellate Side: there were 3 District Judges and 12 Subordinate Judges with jurisdiction up to Rs. 5,000. In Thar and Párkar the Deputy Commissioner is the District Judge and the mukhtyárkars performed the functions of Subordinate Judges. In the Panch Maháls civil suits are disposed of by 2 munsifs whose jurisdiction is not limited as to value. From their decisions an appeal lies to the court of the Agent to the Governor.

The total receipts of the civil courts in the Bombay Presidency are shown as Rs. 18,70,586, and the cost is said to be Rs. 22,32,393.

The total number of suits instituted during the year 1881 was 150,810 compared with 148,928 instituted in 1880. Of these 1,037 were filed in the High Court in which for the last two years the amount of litigation appears to have somewhat declined. It will be interesting to note hereafter what is the effect of the new Presidency Small Cause Court Act by which the jurisdiction of the Small Cause Court has been increased from Rs. 1,000 to Rs. 2,000; but, as it only came into force on the 1st July of this year, it does not affect the present figures.

In the District Courts 206 suits were instituted compared with 259 in 1880, 282 in 1879, and 239 in 1878. In the subordinate courts, including the courts of inamdars and jaghirdars, 121,111 suits were instituted. In the Regulation Provinces there has been a small increase, compared with the figures of 1880, in the number of suits instituted in the subordinate courts in all the collectorates except Ratnagiri, Belgaum and Kaladgi, Dharwar and Kanara. As regards the increase in the number of suits instituted in Ahmedabad and Kaira, the District Judge attributes it to the provision introduced into the law in 1877, which prohibits the granting of applications for execution after the expiration of twelve years from the date of the decrees, owing to which the decreeholders, with the object of securing themselves against any loss, induce their judgment-debtors to pass new bonds for the sums due on the decrees, and then resort to the Courts to obtain fresh ones.

In the four collectorates of the Deccan—Poona, Sholápur, Ahmednagar and Sátára—which are subject to the Dekkhan Agriculturists' Relief Act, the number of suits instituted has increased considerably. The decrease compared with the average of the ten years previous to 1880 is supposed to be due to the fact that a large number of quarrels are intercepted by the conciliators before they reach the courts, and that the period of limitation has been greatly enlarged. If the quarrels disposed of by the conciliators and the suits disposed of by the subordinate courts be added together, it will probably be found that there has been no very serious decrease in litigation compared with that of any previous year subsequent to the famine.

In the Southern Marátha Country litigation seems to have slightly decreased. It is attributed to the improved condition of the rayats which enables them to meet just dues without obliging creditors to seek the help of the civil courts, but a somewhat contrary reason is assigned by the Judge of Kánara to account for the decrease of suits instituted in that district. In reference to Sind, where there has been some decrease in litigation, the explanation given is that it is due to the cessation of that exceptional stimulus which in 1879-80 had been given to trade and speculation by the construction of the railway and the contracts connected with the Afghan War. In the l'anch Máhals there seems to have been a considerable increase in the institution of suits during the last four years.

Comparing one district with another there has been no very striking increase or decrease in the litigation of the Presidency. There has been a slight increase in Gujarát and Khándesh and a

more considerable one in the Deccan; and there has been a decrease in Sind, the Southern Marátha Country and Kánara; while in the Konkan the decrease in Ratnagiri is more than counterbalanced by the increase in Thana and Kolaba. Except as regards the increase in the Deccan, which is in all probability of a permanent nature, the fluctuations elsewhere appear to be only of an ordinary kind, which may be attributed to local and accidental reasons rather than to general causes.

In the Mofussil Small Cause Courts 15,893 suits were instituted as against 16,999 in 1880. In Ahmedabad and Nadiád the decrease is more than accounted for by the fact that in the beginning of 1881 the Judge was invested with insolvency powers, and that 283 creditors made claims during the progress of insolvency proceedings, which claims would, in previous years, in all probability have resulted in regular suits. In the cantonment magistrates' courts at Belgaum and Poona 889 suits were filed, and in the mamlatdars' courts 7,426 suits under Bombay Act III. of 1876. In the courts of village munsifs in the Deccan 2,757 suits were instituted compared with 3,257 in 1880. The decrease is partly accounted for by the fact that the appointment of the village hunsif at Satara, who received many suits, was cancelled during the year. The munsifs of Ahmednagar and Bhingar between them received no less than 1,083 suits during the year.

57,477 new applications were made for the intercession of conciliators, and it appears that in 36,869 cases they failed to effect a compromise, or the parties refused to attend to their summons, but in 14,146 cases their intercession appears to have had some effect in settling disputes by compromise or by reference to arbitrators. On the whole they appear to have done more work in this year than in the last.

There were 122,333 suits for money, almost three-fourths of which were brought on contracts in writing, while suits on account stated, for goods sold, and for rent of houses make up the chief part of the remainder. 23,182 suits related to matters of title, &c., of which 7,968 related to immoveable property and 7,426 were summary suits for the recovery of property of which the plaintiff had been recently deprived. The variations between the two years do not seem to require any special remarks.

The total valuation of the suits instituted in the Mofussil in 1881 was Rs. 1,30,77,749 compared with Rs. 1,49,10,975 in 1880. The valuation of the suits instituted on the Original Side of the High Court was Rs. 29,94,029.

The number of suits disposed of by the various courts of original jurisdiction is shown in the following table:-

	•••	•••	1,060
	•••	•••	275
Subordinate Judges	•••	•••	118,620
Cantonment Magistrates	•••	•••	866
Jághírdárs and Inámdárs	•••	•••	630
Mofussil Small Cause Courts	• • •	•••	16,409
Village Munsifs	•••	•••	2,934
Mamlatdárs under Bombay Act III.	of 1876	•••	7.271
Revenue Courts			225

Of these 15,292 were disposed of without trial and 26,133 were compromised. Of the remainder 95,191 resulted wholly or partially in favour of the plaintiff and in 8,740 cases the claim was dismissed or the decision was in favour of the defendant; while in regard to 2,934 suits decided by the village munsifs the result is not given. The balance of suits pending at the end of the year was 30,458.

The number of cases decreed ex parte in the subordinate courts was 45,944 and in the Mofussil Small Cause Courts 6,245, and they correspond very closely with the figures in 1880.

The average duration of suits is shown in the following table:-

		Contested,	Uncontested.
Courts of Inamdars and Subordinate Judges' Cour Mamlatdars' Courts Small Cause Gourts District Courts Revonue Courts High Court	dárs	400·7 161·5 72·7 265·7 2·6 261·9	118·1 75·4 42·6 200·5 3·1 265·3

It is not likely that the disposal of uncontested cases can be much accelerated, except perhaps in the inamdars' courts, where there might probably be more expedition; and as regards the contested cases efforts are being made to prevent their being unnecessarily delayed. In many cases, however, adjournments cannot be avoided, and some delay is essential in the interests of justice.

In addition to the regular suits mentioned above, the courts during the course of the year disposed of 16,539 miscellaneous applications.

3,908 appeals were instituted during the year, 4,004 were disposed of, and 3,676 were left in arrears, of which 579 were pending in the High Court. In 10 courts the number of appeals in arrears were less than 100 and in 10 other courts more than 100. In Thána no less than 791 appeals were pending, and Government has lately appointed an extra First Class Subordinate Judge with appellate powers to assist in clearing off these arrears.

The persistency with which second appeals are presented to the High Court against decisions involving no debateable point of law, but based simply on findings on fact, is remarkable. The amount of money that must be thrown away quite hopelessly on second appeals against decisions involving questions of fact shows partly that the law on the subject is very imperfectly understood on the part of the pleaders in the Mofussil who advise or sanction these appeals, and partly that there is often on the part of the defeated litigant a reckless spirit of gambling which makes him rush into an appeal, although he must know that the result is very unlikely to be favourable. The percentage of decrees reversed or modified by the District Courts, compared with the total

number of appeals disposed of, varies considerably in the different districts. It is highest in the Panch Mahals and lowest at Broach.

There were pending before the courts 257,373 applications for execution. In 26,590 cases the applications were fully satisfied; in 44,514 they were partially satisfied; in 130,281 they were wholly infructuous, and in 54,523 they were pending at the end of the year. No doubt in many cases where the application for execution is shown as infructuous, the decree was settled out of court. 1,738 persons were imprisoned in execution and 4,410 were arrested without being imprisoned. Moveable property was sold in 3,020 cases. Immoveable property was sold in 6,555 instances, and was retained under management by the Collector under the provisions of Section 322 of the Civil Procedure Code in 796. Possession of moveable property was given in 49 cases and of immoveable in 2,592. Specific performance was enforced in 33 instances and partition was effected in 115. The sum of Rs. 21,93,884 was realised in execution with the issue of process and Rs. 3,04,887 was realised without issue of process.

In the Insolvency Branch of the High Court 545 proceedings were disposed of. Of the 465 applications before the Mofussil courts 61 were withdrawn, 103 were granted, 170 were rejected, and 131 were pending at the end of the year. It is evident that the insolvency provisions of the Civil Procedure Code and Dekkhan Ryots' Act are not popular, and this fact is attributed by many Subordinate Judges partly to scruples of honesty and partly to the fear entertained by the debtors of losing all credit in the future if they once become insolvents.

THE DEKKHAN AGRICULTURISTS' RELIEF ACT.

There are 36 subordinate courts in the four districts to which the Dekkhan Agriculturists' Relief Act applies and there has been a very decided increase in the number, 16,542, of suits of all kinds filed during the year under report as compared with 1880. The increase is general in all the courts of the four districts, and in some courts the number has more than doubled. It is true that the number still falls very far short of the average of the previous ten years, but this may be ascribed mainly to the conciliation system, which intercepts a vast amount of threatening litigation, and to the enlargement of the limitation period. Of the total number of new suits, no less than 11,607, or 70 per cent., falls under the Dekkhan Agriculturists Relief Act, and of these 6,087 suits exclusively concerned non-agriculturists and 5,520 were purely agriculturist cases. The definition of the term "agriculturist" has recently been amended, and it will probably have the effect of largely augumenting the number of agriculturist cases and of diminishing the number of non-agriculturist cases.

At the beginning of the year there were 214 suits for account pending in the subordinate courts, and nearly all of these had been instituted during the last two months of 1880 soon after the issue of the notification remitting the institution fee in such suits. During the first few months of the year such suits greatly increased, but in May the High Court decided that in mortgage

cases the remedy by way of a simple account suit under section 16 was inapplicable, and that permission to pay by instalments could not be allowed to the debtor. Before this decision was made known, no less than 827 new suits for an account had been filed by agriculturists, and in all these cases, with the exception of 15, the transactions of which accounts were sought were mortgage transactions. After the ruling became known only 30 suits for an account were filed during all the rest of the year. Redemption suits would have the same effect; but, as the fees were costly, the Government of India remitted them in the interests of the indebted class, which immediately caused a large increase in the number of these suits. It appears that the greater number of debts is secured by mortgages, and that most of the valuable land in the country is held in mortgage. The number of suits by mortgagees against their agriculturist debtors for possession or sale of mortgaged property is extremely small, and it is possible that the creditors do not sue as long as their security is good and the profits of the mortgaged land cover the interest.

10,060 suits were disposed of, leaving a balance of 3,658; 2,629 suits were admitted, 3,085 contested, and 1,842 were withdrawn or compounded. In 796 suits the history of the transactions was investigated and in 2,557 suits instalments were allowed. most cases the Judges compel attendance of the defendants and examine them in order to arrive at a fair decision. The usual result of an enquiry into the history of a case is to reduce the creditor's claim, sometimes slightly, sometimes considerably, and upon an average about 26 per cent. There has been no violent or radical change. Debtors are not unfrequently disappointed with the small results in their favour, and creditors on the whole are fairly satisfied. The average duration of a suit was 3 months The conciliation system has intercepted on its way to the courts the bulk of the easy simple cases, and the suits that come before the courts now are the ones that demand time and trouble in disposal. The costs incurred amount to 10 per cent. of the total value of the suits. 3,218 applications were presented for the execution of decrees, and in 172 cases only was moveable property belonging to the debtors attached and sold. cases satisfaction was entered after private adjustment.

In no case has any use been made of the previsions which authorise the courts to make over the management of a debtor's immoveable property to the Collector for seven years for the benefit of the judgment-creditor. It was hoped that this provision would protect the interests of creditors, but it has remained inoperative, as well as the section which authorises the discharge of the judgment-debtor when his debts are less than Rs. 50. It has been made use of in only ten instances, and it is said there are very few judgment-debtors whose debts are less than Rs. 50.

One Subordinate Judge states that the ordinary cultivator would be too proud to beg to be discharged from such a petty debt. The clause which empowers the court to direct insolvency proceedings to be taken with respect to a judgment-debtor whose debt exceeds Rs. 50 has likewise remained a dead letter.

The provisions of the insolvency chapter have likewise proved inoperative. Only 10 applications were presented to the courts during the year, 2 of which were rejected on the merits, 1 dismissed for default, 2 withdrawn, and 5 are pending. Religious scruples and the fear of losing credit are assigned as the two chief causes, but it seems to the Special Judge that if the process were once familiarised by a few successful examples there would be no hesitation on mere religious grounds in freely resorting to it.

At the end of the year there were 136 village munsifs who disposed of 2,934 suits and left 241 in arrears. The heaviest work appears to be in the town of Ahmednagar and Bhingar, but three-fourths of the munsifs have had no work to speak of. Those who have had work to do have on the whole done it in a very satisfactory manner. The suits disposed of were of a very simple character and were mostly uncontested. In the few contested cases the decisions seemed to be proper. In a few instances moveable property was attached in execution of decrees. which were, however, always satisfied before it became necessary to order a sale. The munsifs appear to be chiefly useful in those places where the resident population is to a large extent non-agricultural. The office is popular, and the inhabitants of several places have applied for the services of such officers in their own neighbourhood, but the probable effect would be to increase the number of petty money suits for sums below Rs. 10.

The conciliation system is in full force in 26 tálukas, in partial operation in 5 tálukas, and has been suspended in 6 tálukas, owing to the want of success attending the experiment. In all there were 313 conciliators who disposed of 69,531 applications, but failed to effect a settlement in 36,869 cases, in the majority of which the parties refused to attend to their summons. chief complaint made by conciliators is that the people will not come to them when called, because they know they cannot compel their attendance; and many of them pray that the law may be amended so as to arm them with the necessary powers. The dismissals for default amount to 18,616, and in numerous instances, no doubt, the creditors privately settle their disputes with their opponents. The withdrawals, 5,569, may be attributed almost wholly to amicable settlements effected with the intervention of the conciliators. In many cases the settlement was carried into effect in their presence, so that no necessity remained for reducing the agreement to writing and sending it to the court at further expense. 8,577 agreements were effected before conciliators and by them reduced to writing and transmitted to the courts, or nearly 13 per cent. of the total disposals, but 44 per cent. in the number of cases in which a fair effort was made to cause the parties to agree. 34,067 certificates were issued by conciliators, but it does not appear that the plaintiffs take any immediate steps to proceed against their debtors in the courts. The certificates cost four annas each, and the fees realised from this and other sources amount to Rs. 8,516.

The work has been very unevenly distributed among the different conciliators: some have had too much to do, and others

have had no work at all. The small circle system has not been successful, as it is impossible to get sufficiently good men in small local areas. The total value of the claims in the applicacations presented to the conciliators during the first eleven months of the year amounts to the large figure of 444 lakhs. The value of the claims in cases in which agreements have been effected amounts to 5½ lákhs. Most of the agreements relate to claims on simple money bonds or decrees, but a good many relate to mortgage transactions. Very few disputes concerning immoveable property are amicably settled, and, speaking generally, most of the agreements are in outward appearance fairly reasonable and equitable, and claims are reduced about 28 per cent. on an average. Where conciliators are themselves good, the conciliation system may fairly claim to have done much good, but it is still on its trial. Its advantages are not few. It tends to save the parties a vast amount of time, trouble and expense, and to allay the irritation between parties which resort to the courts might occasion, and intercepts in the initial stage an immense body of litigation, and thus allows to the courts more leisure to investigate the contested and more difficult cases that come before thom.

The practice of giving receipts, though it is made compulsory by law, is not more followed than it used to be, and there have been no instances of statements of account or pass-books being demanded from the creditors. There were nine prosecutions for neglect to tender receipts, and in one case a conviction was obtained.

The Special Judge disposed of 206 cases on revision, in which he confirmed 137 decrees and amended or reversed the remainder.

Bombay Court of Small Causes.

There has again been a marked decrease in the number, 28,349, of suits instituted, which was less in 1881 than in any year since 1869-70, except 1874. The decrease (3,106) is almost entirely in the suits on promissory notes, for money lent and for goods sold, and is ascribed to the general prosperity of the community during the year. But the increase in suits on accounts stated, on judgments and for trover is probably due to the low prices of food staples and the consequent improvement in the condition of the petty trading and labouring classes. Experience shows that low prices have a direct effect in reducing the business of Small Cause Courts in a large urban population, and this is borne out by the fact that the decrease was mainly in suits for small amounts not exceeding Rs. 200, the majority of which are brought against the poorest members of the community for the recovery of small loans or petty debts incurred in respect of the supply of the necessaries of life.

Of the 28,602 suits disposed of during the year, 18,274 were decided on the return date of the summons. The average duration of adjourned cases was less than 5 days before three of the Judges and 21 days before the First Judge. 2,828 cases were left in arrear.

The receipts from stamps and fees less refunds amounted to Rs. 1,76,457, and the expenditure, salaries and contingencies to Rs. 1,65,660, leaving Rs. 10,798 as the net profit to Government.

The cost paid on the institution of suits in which the amount litigated was Rs. 19,96,440 amounted to Rs. 1,68,494, whilst the amount recovered and paid to suiters during the year was Rs. 3,80,040. In 29 cases compensation was ordered to be paid to the defendants by plaintiffs under Section 42 of the Act.

Registration.

The Indian Registration Act III. of 1877 extends to the whole Presidency, while a special registration under the Dekkhan Agriculturists' Relief Act XVII. of 1879 is practised in the 4 districts of Ahmednagar, Poona, Sátára and Sholápur.

Deeds registered.

Under the former there were 78,446 registrations of all descriptions during the year 1881-82 against 78,837 in 1880-81, thus exhibiting a decrease of 391. Compulsory registrations decreased from 60,227 to 59,647 and optional registrations increased from 18,610 to 18,799; the first named class, therefore, shows a decrease of 580 transactions and the last named an increase of 189. The details may be seen from the following table:—

	1880-81	1881-82.	i Increase	Decrease.
Total compulsory Immoveable Optional Moveable Wills	60,227 14,348 3,664 598	14,348 14,567 219 3,664 3,521		580 143
Total	78,837	78,446	332	723
		Deduct I	ucrease	332
		Net D	ecrease	391

The number of registrations for the last ten years shown below tends to prove that registration is stationary if it does not show a tendency to decline:—

1871-72	84,388
1872-73	90,361
1873-74	85,144
1874-75	71,856
1875-76	75,550
1876-7 7	76,381
1877-78	90,297
1878-79	97,559
1879-80	95,723
1880-81	78,837
1881-82	78,446

Wills and Authorities to adopt. 711 wills were registered in 1881-82 against 598 in 1880-81, showing an increase of 113. 17 wills were deposited, 4 withdrawn from deposit, 1 opened, and none withdrawn for record in court, against 19 deposited, 9 withdrawn, 2 opened and none removed for record in court in the previous year. 3. authorities to adopt were registered, being the same number as in the previous year.

6.184 copies of certificates of sale were filed in accordance with amended section 89 of the Registration Act during the past year against 6,905 filed in the previous year, and 24 certificates under the Land Improvement Act against 49 in the previous year; the tion 89 of the decrease may be said to be due to the comparatively improved condition of the cultivating class, land being sold or mortgaged only in the last resort.

Copies of certificates of sale, &c., under Sec-Registration Act.

The aggregate stated value of property affected by instruments registered in 1881-82 amounted to Rs. 4,76,57,451-3-9 against Rs. 4,88,64,755-14-5, the decrease being Rs. 12,07,304-10-8. The value of registered property shows an increase in the 8 districts of Ahmedabad, Khándesh, Násik, Poona, Kaládgi, Karáchi, Shikarpur and Thar and Parkar; in the remaining 17 districts a decline took place. Exclusive of wills and authorities to adopt and also 803 instruments in which no value or consideration was shown, the average per transaction during the past year was Rs. 619-7-11 against Rs. 629-7-5 in 1880-81. year the average value per transaction in the real property class stood at Rs. 621-10-3; in the past year it has fallen to Rs. 613-10-8. In the moveable property class the average value, which stood at Rs. 684-6-10 in 1880-81, has also fallen during the year under report to Rs. 601-2-4. The average registration fees in 1880-81 were as follows in the various classes:—Compulsory Rs. 2-2-9, optional immoveable Re. 0-7-4, optional miscellaneous Rs. 1-12-8. For the past year the average fees stood as follows:—Compulsory Rs. 2-3-7, optional immoveable Re. 0-7-11 and optional miscellaneous Rs. 1-14-6. Taking all classes together the average registration fee was Rs. 1-14-2 in 1881-82 against Rs. 1-13-5 in the preceding year, or very nearly the same.

Values and Fees.

The great falling off in registrations in the 4 districts of Ahmednagar, Poona, Sátára and Sholápur owing to the Dekkhan Agriculturists' Relief Act XVII. of 1879 being in force, amounts to 2.355 as compared with the previous year, that is to say, including compulsory and optional registration under one head there were 10,392 instruments registered in 1880-81 against 8,037 in the year under report. The chief cause for this decrease may be attributed to the definition of the term "Agriculturist" given in amended Act XXIII. of 1881, whereby any person holding land of his own is an agriculturist, and thus a still greater number of instruments were compulsorily registrable under that Act than in the previous year. Excluding these 4 districts the registrations in the remaining 21 districts were 70,409 against 68,445 in the previous year.

Cause of Increase or Decrease.

Of these 21 again there was an actual increase in 8 and a decrease in the remaining 13. The increase was in the districts of Khándesh, Ahmedabad, Surat, Násik, Dhárwár, Bombay, Kolába and Karáchi, and shows a total of 3,579 registrations, and in the remaining 13, viz., Kaira, Thána, Kánara, Broach, Belgaum. Ratnágiri, Kaládgi, Panch Maháls, Aden, Shikárpur, Hyderabad, Upper Sind Frontier and Thar and Parkar, a falling off amounting to 1,615 registrations was reported. This leaves a balance in favour of surplus of registrations to the number of 1,964. The

increase in Náisik, Bombay, Kolába and Karáchi calls for no special remarks, as it is small and may be attributed to the fluctuations of In Khandesh and Surat the increase is in documents of both compulsory and optional classes and is attributed to the provisions of Section 50 of the Registration Act becoming more widely The increase in the district of Ahmedabad known by the public. under both heads is due partly to the purchase of houses by the municipality for widening a road and to the purchase of new houses in their stead by owners of the former houses, and partly to the bad season which rendered the recovery of debts difficult, and compelled money-lenders to consent to a renewal of their old documents, and is also partially owing to the registration of the certificates of sale of land of value of Rs. 100 and upwards being made compulsory. The increase in optional registration in the Dhárwár District is said to be due to the pains which have been taken to make the benefit of registration under that head more generally known to the public. The causes assigned for the decrease in the 13 districts are varied. In Kánara the decrease of 416 under both the heads is said to be due to the prices of grain having gone down, trade having declined and the poorer classes being able to maintain themselves without borrowing money. Transactions in land also are said to have declined, owing to the survey settlement being still in progress, so that the actual value of land cannot be determined. The same may be said more or less for Broach, Belgaum and Ratnágiri. In Kaládgi the decrease is said to be due to passing several deeds for sums below Rs. 100 relating to the same property and thus rendering the registration of such It is also said that railway works being in progress in several tálukas of the district, people have devoted themselves to earning their livelihood by wages and by entering into contracts which keeps them out of money difficulties. In the districts of Kaira and Panch Maháls slackness of trade and cheapness of foodgrains are said to have caused a falling off in sales and mortgages. In Aden the cause of decrease is owing to fewer properties having changed hands during the year, and in Shikarpur, Hyderabad, Upper Sind Frontier and Thar and Párkar the decrease is ascribed to the fall in the price of grain in consequence of which the agriculturists have during the last year less necessity for borrowing money than in the preceding year; it is also said that the falling off to a certain extent is due to the action of the new law with regard to the management of the encumbered estates in Sind. The decrease in the Upper Sind frontier is said to be due to the State Railway having ceased to take up lands and to the advantage of the Encumbered Estates Act. In the districts of Kaira and Panch Maháls increase in compulsory and decrease in optional registration is observable, while the reverse is the case in the districts of Thána, Násik, Broach, Belgaum, Ratnágiri. Dharwar, Bombay, Kaladgi, Kolaba, Hyderabad, Karachi, Upper Sind Frontier and Thar and Parkar. Kanara, Aden and Shikarpur exhibit a decrease under both the heads. The increase or decrease is more or less attributable to the good harvest and the better appreciation of the advantages of registration by the public in general.

It is to be remarked that, before immoveable property is mortgaged or sold, money is first raised by any other available means, such as pledging gold and silver ornaments, and, solong as credit lasts, obtaining advances on "khátás", the a counts of which are regularly made up at intervals stamped with a receipt stamp and signed by the borrowing party, and such documents are received in evidence in every court. With returning prosperity there must be a return of facilities for obtaining money by the above means, and this is a hindrance to the execution of instruments relating to immoveable property which would be compulsorily or optionally registrable. Again it is also the practice in some parts of the Presidency to transfer land by "Rajinamas" before the revenue officers, instruments which are exempted from stamp duty and have not hitherto been registered; this may cause a decrease in registration.

In 1880-81 there were 339 cases of refusals to register, and during the year under review the number has decreased to 325. The general cause of such refusal by sub-registrars is the denial of execution by one or more of the parties. The number of appeals or applications which arose out of 325 refusals was 59. In 47 of these registration was ordered by the appellate authority and in 12 the order of refusal was confirmed. There were in the past year 7 cases of applications to registrars for the recovery of costs arising out of enquiry held in connection with applications for the reversal of the sub-registrar's order of refusal on the ground of denial of execution, which were complied with.

Refusals to register.

The number of deeds impounded by registering officers during the past year on the ground of insufficiency of stamp was 354 against 456 in 1880-81. In 123 cases the deeds so impounded were held to be sufficiently stamped. In 191 cases the action of the impounding officers was upheld by the Collectors, who ruled that the stamp was insufficient, and 40 cases awaited disposal at the end of the year.

Impounded

There was no change in the number of registration offices during the year under report. At the close of the year there were 25 registry and 225 sub-registry offices in operation. Of these 162 are special and 63 ex-afficio. Sanction has, however, been given by Government to the proposal for appointing special in lieu of all ex-officio officers in the Presidency proper except Aden, arrangements for which were being made at the close of the year, and it is expected that this change will have a beneficial effect upon registration in the offices concorned.

Offices,

10 persons were prosecuted during the year under report for Prosecutions. offences against the registration law. Of these 7 were convicted and punished and 3 were discharged.

The receipts of the department for the past year amounted to Rs. 2,46,869, an increase of Rs. 2,148 on the year preceding.

Receipts.

The net result is an increase of Rs. 2,148. Most of this increase is due to the enhanced realisation under the head of compulsory registration and to the larger number of transactions under the optional class; while the increase under the head of searches and inspections is attributable to the larger number of searches made by the people, which leads to the belief that the registration of instruments is yearly being found more assaul.

Expenditure.

The expenditure for the past year was Rs. 2,12,014, or Rs. 10,991 less than in 1880-81, due to the relief obtained by charging a certain portion of the salary of the sub-registrars in the 4 Deccan districts to the Dekkhan Agriculturists' Relief Act.

The 8 districts of Panch Maháls, Ahmednagar, Sátára, Sholapur, Kaladgi, Aden, Upper Sind Frontier and Thar and Parkar have failed to be self-supporting. These, with the exception of Aden, are the same as shown last year in this class. Act XVII. of 1879 being in force in the Deccan districts accounts for the deficit in these districts, which have not been self-supporting since its introduction; and although Government have sanctioned a portion of the pay of the sub-registrars under the Indian Registration Act being debited to this Act for the year under report, even with this relief only Poona has shown a surplus, which is partly due to the large number of registrations in the Poona City. The net cost of the above offices and districts for the year under report amounts to Rs. 61,985, but the receipts amounting to Rs. 19,463 the actual deficit was Rs. 42,521. total receipts of the remaining 17 districts amount to Rs. 2,27,406 and the expenses to Rs. 1,50,028, leaving a surplus of Rs. 77,377. Of this surplus the Bombay District alone contributed Rs. 15,969, or nearly one-fifth.

Shortly the account stands for registration —

Registration under the Dekkhan Agriculturists' Relief Act.

Under the Dekkhan Agriculturists' Relief Act all documents executed by an agriculturist which relate to money, or mortgages, or sales, or leases, are required to be written and executed before village registrars appointed for the purpose. The kulkarnis or accountants of the villages were generally employed; but, as the work was not satisfactorily done by them, special registrars have been appointed, and the change will gradually be extended. The returns show that 112,655 documents were registered, which is less by 42,626 than the number registered in 1880-81, and the decrease appears to be common to all the four districts to which the Act applies. The conclusion may be drawn that moneylenders are not so eager to advance money to clients who are

specially protected by the law. The law provides that when a new deed supplants an old one, the latter must, also be produced before the village registrar, and 11,463 such cases of urred during the year. The number is less by 9,560 than the number in 1880-81, and it is said that the law is evaded by the creditor persuading the agriculturist to receive a small new loan, and to acknowledge before the registrar that he has already received the balance.

The Act also provided for the registration of all documents relating to money or lands executed by agriculturists before the passing of the Dekkhan Agriculturists' Relief Act, and required that they should be registered within one year from that date. 6,392 such documents were registered, but as over 100,000 similar documents had accumulated, and great inconvenience would have been caused by insisting upon their registration, the law upon this point has been repealed. It has also been provided that the parties to a document who are not obliged to sign it need not attend in person before the registrar, but may depute some duly authorised person to attend for them.

The Inspector General of Registration believes that the Act has proved to be of great benefit to the rayat, and that as he becomes more acquainted with its provisions he will be able to protect himself more effectually, and that already there have been many instances of agriculturists suing for a recovery of their lands from the hands of mortgagees, but that it has affected the business of the petty money-lenders.

The receipts from fees amounted to Rs. 31,893, and the expenditure to Rs. 45,219.

JOINT STOCK COMPANIES.

The number (21) of new companies registered was 5 more than the number in the preceding year, and is the highest number reached for several years. 13 were mills and presses, 2 were trading companies, I was a gold mining association, I a planting company for the cultivation of lands in Travancore, and 4 were miscellaneous, including 2 small steam-ship companies. 4 companies went into liquidation, but in 3 of these cases the liquidation was nominal and merely preparatory to re-opening with more capital, and, at the end of the year, 113 companies were on the register engaged in business and 82 were in liquidation. There were also 10 literary and scientific societies on the register, but no new society was formed during the year.

The companies at work may be classed as follows:—

Municipal Administration.

BOMBAY MUNICIPALITY.

Income and Expenditure. The revenue of the year was Rs. 38,73,693 and the expenditure Rs. 37,98,872. The revenue has increased under several heads, but the special element of increase is the profit of nearly 2 lakes of rupees which accrued on the timely sale of the Government 4 and 4½ per cent. paper in which the 27 lakes drainage loan had been invested. The chief items of increase in expenditure were under conservancy, registration and vaccination, and the special expenditure on the census. More money was also spent on repairs to roads and improvements to streets. Larger payments on account of interest were made, and the first instalment of repayment of debt had to be met. Further, the sum of Rs. 2,50,000 was appropriated to a separate deposit account to form the nucleus of a municipal building fund in order that the Corporation may have office buildings of their own instead of those at present rented from private parties.

The following table exhibits the demand of the year on account of property rates as contrasted with that of 1880:—

					P
RATE.			Year	Gross Demand.	elet Demand after deducting Remissions and Refunds.
				Rs.	Rs.
Consolidated Rate	•••	{	1880 1881	8,48,342 8,48,488	8,36,467 8,38,692
Halálkhor Cess	•••	{	1880 1881	2,50,954 2,52,933	2,49,842 2,52,05 7
Water Rate	***	{	1880 1881	4,43,975 5,00,881	4,41,762 4,99,415
	Total	{	1880 1881	15,43,271 16,02,302	15,28,071 15,90,164

From this it will be seen that the gross and net demands of 1881 exceeded the gross and net demands of 1880 by Rs. 59,031 and Rs. 62,093 respectively, and that almost the whole of this increase is due-to water rate, or, more strictly speaking, on account of water supplied to mills and private buildings.

Rs. 2,31,937 were received on account of wheel-tax. The illegal seizure of carts was put a stop to, and a toll was established at the Máhím and Sion causeways. Carts from Sálsetto had previously been seized from time to time and made to pay wheel-tax, but now if they voluntarily agree to pay wheel-tax they escape liability to toll.

The liabilities at the close of the year, exclusive of the Vehár debt, aggregated Rs. 1,04,49,800, against which the municipality possessed assets valued at Rs. 88,91,500 exclusive of landed property, buildings and stock. The value of these is believed to be much more than Rs. 53,00,000, and there was a further asset of Rs. 3,30,000 on account of arrears of revenue outstanding.

The principal new works in progress constructed out of Loan Funds were the new main sewer from Carnac Bridge to Love Grove, new outfall sewers from Love Grove to the sea, new pumping station at Love Grove, pipe sewers in connection with the new main sewer, raising of Tulsi dams and construction of the Bhandarwáda Reservoir.

Public Works.

The new main sewer, in length 4½ miles, was completed during the year, and the outfall sewer was also finished, but the masonry covering has been injured by a heavy sea. The dams of the Tulsi Lake were raised 6 feet before the monsoon, and at the close of the monsoon the level of the lake was 2 feet higher than it could have been if the dam had not been raised. The additional storage thus obtained is calculated at 234 million gallons, and might have been double that quantity if the rainfall had been equal to the average.

Several other works were constructed out of current revenue. The new footpath on the Queen's Road was washed away by the sea almost as soon as it had been made. The Mathew Road and

the Frere Road extension were completed; the Arthur Road was practically completed, but could not be opened for traffic on account of a difficulty which arose with the B. B. & C. I. Railway Company on the subject of a level crossing. The Frere Road and Arthur Road afford great convenience to traffic, but the former has the disadvantage of being interrupted with five level crossings within a distance of 700 yards. The provision of adequate trade routes in connection with the rapidly increasing dock business is now one of the most important wants of the city, especially in the Mandvi quarter, where the old narrow streets are choked with traffic struggling to and from the warehouses and the quays.

The paving of footpaths is making steady progress. Little was done towards improving and extending the system of street lighting, and the bad way in which the roads were watered has led the Commissioner to undertake the work departmentally. It is also proposed to construct an intercepting sewer along the Queen's Road to join the new main sewer in Khetwádi with a view to prevent the discharge of sewage into Back Bay.

The Elphinstone Garden has been laid out anow and greatly improved; but the Town Council think that it would not be expedient to incur any large outlay in improving the Victoria Gardens. They would rather see a new garden established in a more convenient situation elsewhere.

The tramway was extended from Páydhuni to the Grant Road Bridge and from the Money School across the Carnac Bridge to the Frere Road. The Corporation also authorised the Oriental Telephone Company to carry their lines of wire from a central exchange along the public streets.

Vital.

The census of 1881 gave a population of 773,196, more by 128,791 than that enumerated in 1872. The largest increase is in the division of Kámáthípura, and the low-caste Hindus have increased in greater proportion than other classes.

The number of births registered during the year was 17,840 and the number of deaths was 21,856. The increase in the number of deaths over the previous year is attributed to diseases of the respiratory system and to tholera. There was a marked diminution in the number of deaths caused by small-pox, measles, fever and phthisis; and the highest death-rate, having regard to population, was in Upper Colába and in the Khára Taláv sub-division.

There were 546 deaths from cholora out of 703 seizures reported, and it is worthy of note that 358 persons out of the number attacked were born in Ratnágiri. They were chiefly poor labourers who crowd into Bombay and live in very insanitary surroundings. The Health Officer was not able to trace any cases to contaminated water-supply, but observed that the usual conditions attending cholora cases were dampness and imperfect ventilation aggravated by overcrowding. The insanitary state of the Lascars' Lines at Colába and the Native Infantry Lines at Carnac Bridge, in which several cases occurred, was brought to the notice of the authorities.

The number of primary vaccinations was 18,591 as compared Vaccination. with 12,893 in the preceding year. The number of vaccinations exceeded the number of births, and this is perhaps due to Plarge number of children voit in the previous year having been vaccinated in 1881, as the Act has been more strictly enforced.

The expenditure in the several branches of the Health Department was Rs. 7,28,627, while the receipts were Rs. 3,73,979.

The reclamation of the Flats has steadily progressed, and 67 acres have been reclaimed. Since the practice of covering the sweepings with a light coating of good earth has been adopted, no nuisance has been caused by the deposit.

The Flats.

Hospitals.

More hospital accommodation is much wanted, a fever hospital and rest-houses for cholera patients being most needed, especially since strong measures for disinfection have been taken under section 245 of the Municipal Act. A piece of ground has been acquired for this purpose and further provision will gradually be made. A milch cattle stable has been built, but it is suggested that proprietors of stables should be compelled to build them in accordance with sanitary regulations. Several owners of cattle have been prosecuted, and this has led to about 700 buffaloes and bullocks being removed from the crowded city to vacant ground on the foreshore.

There were 22 Maráthi and 19 Gujaráthi schools to which the municipality contributed Rs. 14,583.

DISTRICT MUNICIPALITIES.

One town municipality was established at the site of the Yamnur Fair in Dhárwár, and the total number at the close of the year was 164, of which only 10 were city municipalities managed by 901 official and 1,625 private individuals, of whom 382 wero Europeans and 2,144 Natives. The attendance at committee meetings was generally bad, and the municipal population according to the last census was 188,576.

In Virangám the duty on salt and the octroi on imports of iron were abolished, and in Modása octroi duties were superseded by a house-tax. A house-tax was introduced at Gokák and Nipáni; in the latter town the collection of the tax caused considerable opposition, because the assessments had not been carefully made, but this was being corrected. The Commissioner, S. D., has taken every opportunity to point out to the municipal committees the desirability of abolishing octroi duties, and he entertains hopes that his suggestions will be acted upon. Ratnágiri the octroi schedules and rules for the refund of duty have been revised, and a revision of these duties is to be undertaken in all towns. The duty on oil-seeds has been abolished in Karáchi, and the general tendency in Sind and, in fact, in all districts is to relieve trade from any onerous burdens or vexatious imposts whenever they are found to exist, and also to relieve the poor from bearing an undue share of the municipal burdens.

The income of all municipalities taken together was Rs. 29,64,512, of which Rs. 7,87,635 was derived from direct

taxes, Rs. 15,14,371 from indirect taxes, and Rs. 6,62,506 from miscellaneous sources. The incidence per head was Rs. 1-3-3. In the Northern Division the municipal income increased in the Konkan and in several of the municipalities in Gujarat. In 1) holka the opposition to the house-tax caused a decrease, but in Balsar the people acquiesced in the tax and paid the arrears. In Surat large remissions of the halálkhor cess had to be made to the poorer classes. In Ahmedabad a native gentleman contributed Rs. 20,000 to the municipality, and in Sátára one lákh was borrowed for the water-works. The receipts from the sale of nightsoil manure in Poona improved considerably, and in several large towns in the Deccan the octroi duties brought in increased sums. In the Southern Division the new house-tax, referred to above, has caused an increase in the receipts under that head, and in Sind the improvement of the octroi and the facilities given to the through trade caused a large decrease at Sukkur, which was compensated by increased receipts in other towns.

The octroi in Sind fell off by Rs. 53,490, but the refunds in all the towns amounted to nearly 5 lakhs owing to the more liberal rules introduced. These rules have also been revised and improved in the Northern Division, and attention is being paid to the subject in other districts. For the purpose of having some check that the levy of octroi does not degenerate into a mere transit duty, the Government of India made inquiries relating to the average consumption of articles per head of population. Their conclusions were based upon the circumstances of the North-West, and, therefore, do not strictly apply to Bombay; but yet the average, although very approximate, is useful as a rough standard for comparison. It is found that with few exceptions the consumption is higher in Bombay than the standard, even after allowing for the refunds which the municipalities do not demur to make.

The total expenditure of all municipalities amounted to Rs. 32,19,503. In the Northern Division there was an increase, as compared with the preceding year, of 2½ lákhs, which is due to the roads and other improvements made in Ahmedabad and Surat and the construction of markets in Thana. The cost of establishment is generally under 10 per cent. of the income of each municipality, but in some instances this rate is exceeded, and attention is being directed to the circumstance. In Kolába and Thána the municipalities spend a large percentage of their income on conservancy, and in Gujarat about 19 per cent. In the Central Division it is 21 per cent., and in the Southern Division nearly 20 per cent. of the expenditure was on conservancy; and the state of most municipal towns, from a sanitary point of view, showed Nearly every municipality that a considerable improvement. can afford it has engaged the services of nuisance inspectors trained in the Bombay Municipality, and a larger revenue from nightsoil for manure is being collected in the larger towns such as Belgaum and Kárwár. In Sind more attention has been paid to conservancy matters generally, and the expenditure is largely in excess of what it was three years age; but, owing to the difficulty of disposing of the town sweepings, the roads are repaired with them in the neighbourhood of Hyderabad.

There are bye-laws in most of the larger municipalities for the registration of births and deaths, and the system is being extended to all towns. In some towns special establishments are er.ployed for the purpose, and apparently they do their work with care and accuracy. The municipalities, except in Sind, do not contribute towards the cost of police, but pay the charges for lighting police stations. In Surat a punitive post is maintained, and the cost is charged to the municipality. Most municipalities contribute towards the maintenance of the dispensaries in their . limits and spend suitable amounts upon lighting. In Karáchi experiments were made with the electric light, and in Hyderabad a supply of oil sufficient to last seven or eight years was laid in. On watering the roads comparatively large amounts are spent in Gujarát, where the heat and the dust make it necessary, and in two towns the expenditure was as high as 14 per cent. of their income; in the Southern Division this service costs a very small sum.

The special works of improvement in Ahmedabad continued to be pushed on vigorously, and in Godhra the opening of the railway obliged a road to be made from the station to the town. In Surat the chief expenditure was on roads, in Roha on watersupply, and in Thana on markets. The water-supply of this town has also been completed at a cost of Rs. 84,000. In Poona Rs. 22,000 was spent on new roads and repairs, in Ahmednagar Rs. 4,400, in Dhulia Rs. 7,600, and large sums were also spont in Barsi and Pandharpur, and in other towns according to their importance; the total spent being Rs. 72,500. In the Southern Division Rs. 27,600 was spent on roads, besides a large sum of Rs. 56,600 on water-supply in Ratnágiri, Nipáni, Rájápur, and Chiplun. The last town has applied for a loan of Rs. 30,000 for this purpose, and in Nipani the works when finished will cost Rs. 30,000, the water being supplied from a little lake made for the purpose. In Sind Rs. 20,100 was spent on municipal roads, and the very large sum of nearly 31 lakhs on waterworks, chiefly in connection with the Karachi water-supply. The Karáchi bonded warehouses were enlarged, and in Lárkhána warehouses were put up with the assistance of the railway staff and the returns have already been considerable.

Grants in aid of education are made in many towns, the total being Rs. 50,426. The financial position of all municipalities is satisfactory; they spend less than they receive, and in the few cases where loans have been raised for works of great public benefit, the instalments are punctually repaid. With the exception of Sind, where the balances are said to be higher than they need be, the balances at their credit at the close of the year were not unduly large, except in those cases where they are being accumulated for special purposes, such as to provide for expensive water-works and other objects.

Military.

Strength of the Army, At the close of the year the strength of the Army was 668 English officers, 607 Native officers, 1,196 English, 3,006 Native non-commissioned officers and 8,952 English and 22,562 Native fighting men, with 94 guns. 529 Europeans had died or invalided during the year and 1,918 Natives, while 5,345 Europeans and 2,074 Natives had left the Army from all other causes, including 3,512 Europeans transferred to other Presidencies, 735 transferred to England, 644 sent to the Army Reserve and Depôt, and 304 limited service men. In the Native Army 1,316 men were transferred from one regiment to another in the Presidency, 561 discharged, and 197 deserted.

The cost was

Expenditure.

For the English Army The Native Army	Rs. 56,10,947 75,24,766
Add the cost of the Staff, Commissariat,	1,31,35,714
Medical and all other necessary establishments	2,16,32,855 13,68,144
The total cost of the Army was	3,61,36,714

This shows a decrease, as compared with the previous year, of Rs. 1,81,92,853, which is explained by the cessation of active operations in Afghanistán, on which account Rs. 3,00,74,562 were spent in 1880-81, whereas during the year under review only Rs. 1,19,40,389 were charged to the late war. These figures are not quite accurate, as a large proportion of extraordinary charges have been classed as ordinary, and the accounts had not been closed when the statement was prepared. For details see Appendix G.

Artillery.

The strength of this arm in this Presidency has been reduced by one battery of Horse Artillery and two garrison batteries, while one Native Mountain Battery has been placed on the peace establishment and the number of its guns reduced from six to four.

Arrangements have been made for remounting the British Cavalry and Artillery under the orders of the Director of Army Remount Operations for India, instead of by purchase through committees as heretofore.

Sanitary.

For the better prevention of sickness the attention of General Officers has, at the suggestion of Government, been drawn to the necessity for providing a light meal for European troops of all arms in the barrack rooms before proceeding on early morning parade—a measure which is now in force, and the cost of which is partly defrayed from canteen funds.

The accommodation in the Central Military Prison, Poona, has been increased from 50 to 100 cells and the establishment revised to meet the altered circumstances.

Prisons.

A regular system has been introduced for training intelligent soldiers as clorks, privates for the duties of lance corporal, and noncommissioned officers for promotion to higher grades.

Drill and Instruction

A system of fire tactics and discipline has also been introduced and practised throughout the Presidency in view to develop the intelligence of non-commissioned officers and make them really responsible for the fire discipline of their sections, which has produced the most beneficial results.

Musketry,

All the British troops were exercised in musketry, and the figure of merit attained was 9.35 points better than in the previous year. 2,000 rounds of ammunition per British regiment have been allotted for long-range firing, and the targets and order for volley firing having been modified, 10 extra rounds are now used by British regiments in this practice, viz., 5 rounds at 600 and 800 yards, respectively, all words of command being given to sections by their own proper leaders.

Musketry. British Troops.

Only four out of the seven regiments of Native Cavalry have been exercised; detached duty prevented the other three being put through the annual course. The figure of merit made was 43.39, being 4.90 points above the average made the last year they were exercised. Out of the 30 regiments of Native Infantry in this Presidency 24 were exercised. The figure of merit attained was 78.43 points, being 3.36 in excess of the previous year. But this the Adjutant General says can scarcely be considered a fair test, seeing that it includes nine regiments recently returned from field service, and which had been unexercised for periods varying from two to four years. Of the six regiments unexercised three are in the Quetta District, two returned late in the season, and had a large number of recruits on their rolls. while the sixth returned after the conclusion of the annual course. Important changes have taken place in the musketry regulations. The allowance of ammunition has been increased, and 2,000 rounds are now allowed to each regiment of Infantry and Cavalry to be expended at any time and in any quantity and manner.

Musketry: Native Troops.

"Moving object" practice has been substituted for "independent firing", 5 rounds being expended at a moving or disappearing target of any pattern and under any conditions selected by Com-Ten rounds of ammunition per man have also been sanctioned for the training of non-commissioned officers and men in collective firing, and distinct prizes are now given for target and judging distance practice.

With the view of encouraging match firing, British and Native regiments are permitted to purchase 3,000 additional rounds of ammunition at half the ordinary rate. Pistol practice is followed

by staff serjeants of Britsh regiments and Native officers of the Indian Army.

Commissions.

His Excellency the Commander-in-Chief considers that if young Native gentlemen of the proper stamp could be induced to enter the commissioned ranks of the Native Army, it would be desirable to encourage them to do so. This very desirable measure does not, however, appear practicable unless Native gentlemen of good family can be admitted after proper training to the privileges of a European officer in the same manner as into the Civil Service. The propriety of giving direct commissions to Eurasians has not been considered advisable.

Discipline.

Orders have been issued for the prosecution before a magistrate of any person found to have purchased or received any portion of a Native soldier's clothing, necessaries, equipment or other property named in Section 149 of the Army Discipline and Regulation Act.

Honours and Rowards. 3 Native officers were admitted to the 2nd Class of the Order of British India for services in Afghanistán.

Clothing.

A new summer dress of yarn-dyed khaki, approved for the Native Army, has been brought into use partially, and will be fully in 1882-83.

Gymnastics.

Bombay, Belgaum, Poona, Kirkee, Ahmednagar, Karáchi, Mhow, Deesa, Ahmedabad, Nasirabad, Aden. These exercises were conducted at the stations named in the margin. The results, as compared with the previous year, are as follows:—

	1880-81,		1881-82.	
	Officers.	Men.	Officers.	Men.
Dismissed in gymnastics	8	1.366	16	1,799
fencing	1	167	1	185
Attended voluntarily	824	32,667	1,271	44,704
Taught to swim		256	*****	72

These results, except as regards the last item, are very satisfactory. It is noted that 17 non-commissioned officers and 26 men from British regiments were put through a special course of instruction and obtained certificates of qualification as instructors.

Garrison Instruction. There were two classes, the first consisting of three officers of artillery who passed, the second consisted of seven regular attendants, and five who attended in the subject of tactics only. The result of the examination of this class has not been reported. 107 non-commissioned officers and men were instructed in gabion and fascine making for six months from 1st August 1881.

Schools, British Troops. On the 31st December, 1881, the following numbers were on the school books as compared with the same date in 1880:—

	31st December 1880.	Sist December 1881.
Adults	1,479	2.064
Elder children	399	^292
Infants	509	370
Industrial classes	603	438

There has been a large increase in the first item; the decrease in the others is attributed by the Adjutant General to the introduc-

1st Class	•	••	6	tion of the short service sys-
2nd ,,		••	238	tem. *1,056 certificates were
3rd ,,		••	303	awarded; 51 men passed the
4th ,,		••	509	Lower Standard Examination
			1,056	in Hindustáni, none in the higher. In the report for

1880-81 it was stated that men were under training as "Battery School-masters". Several have since qualified as such.

The average attendance in 1880-81 and 1881-82 is noted below

Schools, Native Troops.

Non-comm	issione	d Offic	ers	880-81, 22	1881-82 47
Privates		•••		623	779
Recruits	•••	•••	• • •	1,946	2,355
Boys	1,988	2,220			
				4,579	5,401

showing a total increase of 822, which is satisfactory. +252 certificates were awarded, being

† 1st Class	•••	41	one less than in the previous
2nd ,, 3rd	•••	124	year. The following shows the
,,		0.50	educational status of all ranks
		252	who do not attend school.

atus of all ranks who do not attend school, compared with 1880-81 :--

	1880-81	1881-82,
Able to read and write	3,470	5,989
Able to read only	2,185	3,699
Unable to read and write	3,990	7.474

There were 18 girls' schools with an attendance of 439 pupils. Girls'Schools. It has been suggested to Commanding Officers that the present practice of devoting so much time to fancy work of different kinds should be superseded by plain sewing, such as mirzaies, shirts, &c.

3 men qualified as masters, 2 failed to pass and rejoined their corps, one was discharged the service, and 23 were under training on 31st December 1881.

Normal School.

The annual exhibition for the encouragement of soldiers' workshops was held in September last.

Workshops.

During the year under report several works of minor importance were carried out, such as the construction of a recreation room and theatre for British troops at Steamer Point at Aden and re-construction of lower male ward and female ward, European Infantry Hospital, Crater Position, and improvement to the Sanitarium Hospital; construction of 50 additional cells in the military prison; additions to canteen and construction of new quarter guard and cells at Wanowri, Poona.

At Ahmedabad a new hospital for British troops is in course of construction.

The erection of new lines at Jacobabad for the Native Infantry is in progress, and orders have been issued to renew the mud Military Works. PRO TECTION.

floors of Native hospitals once a year or oftener, if considered necessary by the medical officer.

A sum of Rs. 25,000 has been sanction to carry out the repairs to the existing defences at Asirghar and Rs. 24,100 for the construction of buildings in connection with the torpedo defences of Karáchi.

A scheme for the defence of Neemuch Railway Station has also been matured and submitted for consideration.

Review of Troops at Baroda.

On the occasion of the investiture of His Highness tho Gáckwár, the following troops were concentrated at Baroda, and subsequently they were brigaded by the General Officer Commanding Northern Division, and the camp was broken up on the 15th January:-

I/1st R. A. from Ahmedabad.

3rd Light Cavalry from Deesa and Rájkot.

Head Quarters and 2 Companies, 2nd Lancaster Regiment, from Colába.

26th Regiment, N. I., from Ahmedabad.

Poona (proceeding in course of relief of 20th N. I.).

20th Regiment, N. I., from Baroda (under orders for Belgaum).

Field firing.

To carry out one uniform system of field firing and musketry instruction all available troops from each station in this Presidency, except Jacobabad, were moved out into camp for a period of ten days during the cold season with very satisfactory results.

Drill and Instruction.

Several stations have been selected where dummy railway wagons and trucks are to be creeted for instruction in railway embarkation and disembarkation of horses of mounted branches.

M ules.

262 mules pronounced unfit, 296 over 16 years of age and 436 required to complete the sanctioned establishment (1,137), or in all 994 were recommended to the Government of India to be replaced by surplus mules remaining after the termination of the Afghan campaign. Of the 262 mules pronounced unfit, 13 were ordered to be shot and 249 sold to the best advantage, the 296 above the age of 16 years being retained, pending the decision of the Government of India.

Elephants, Camels.

The climate of Belgaum being unsuited for elephants and camels, the establishment of 8 elephants and 52 camels allowed for these stations were withdrawn and utilised at Poona and replaced by 76 pack and 38 draught bullocks with 25 country carts.

The number of elephants for transport purposes allotted to Bombay has been reduced from 78 to 60 and distributed as follows:—

Mhow	22
Poona	20
Deesa	8
Neemnch	6
Ahmedabad	4

vide themselves with tents of the approved pattern, viz., the

Kabul tent, weight lbs. 150 for Staff, Commanding and Engineer

Officers, and lbs. 80 for all other officers. Native officers, too, are

now ordered to keep up their own camp equipage.

Chap, III. PROTECTION.

Officers drawing tentage allowance have been ordered to pro- Maintenance of Camp Equipage by Officers.

A scheme for a transport service for all India, received from Maintenance the Government of India, is under consideration. The proposals for this Presidency are-

of a permanent Transport Service,

to concentrate transport at Poona, Kirkee and Mhow in lieu of the present moveable column carriage, leaving smaller stations dependent upon hired carriage;

to secure the advantage of despatching troops suddenly into the field fully equipped with carriage;

to assemble troops from out-stations at the centres for instructions for short periods;

to maintain transport in Sind with a view to increasing on an emergency the Quotta Force to the strength of a Bombay Division;

to introduce mule carriage as the best description of transport.

The question as to the scale of sick carriage for British troops in cantonments and when marching in ordinary relief is also under consideration in connection with the transport scheme. Doolies and dandies will be supplied and repaired by the Commissariat Department and ambulances repaired by the Public Works Department at stations where there are no ordnance workshops.

During the year the cultivation of the gardens has been carried on with the same interest as in previous years. Vegetables have been supplied to European and Native troops serving in the Quetta District. Arboriculture within cantonment limits has been attended to as funds admit, and the care of road-side trees in cantonments has been transferred to the Public Works Department.

Soldiers' Gardens and planting and watering trees.

The levy of taxes in the cantonments named in the margin

Cantonment Taxation.

From 1st April 1881. Poona Ahmedabad From 1st November 1881. Kirkee Karáchi Belgaum From 1st January 1882. From 1st April 1882. Ahmednagar. From 1st October 1882.

under Section 21 of the Cantonments Act III of 1880 has been sanctioned. The principal taxes levied are property and conservancy taxes and octroi duties, the income derived from which is to be expended

for conservancy, for the protection of houses in cantonments and bázárs from fire, maintenance of police and for lighting and other general purposes. Schedules of proposed taxes for the cantonments of Aden, Baroda and Deesa are under consideration, and when taxation has been applied to all stations, each cantonment fund, with probably the exception of Aden, will be entirely self-supporting, not only releasing the Imperial revenues from a heavy financial burden, but cantonment committees will have the means of effecting many sanitary and other improvements.

Cantonments.

The preparation of compendia of information regarding cantonments has been ordered. They will embrace information on almost every subject to which the Military authorities are likely to have to refer. The topics particularly dealt with are the following:—

I.—Topographical features of the station and surrounding country, with notes regarding cultivation, produce, forage,

supplies, forest lands, encamping grounds, &c.

II.—General Military considerations, such as positions, obstacles, forts, railway stations, defences, bandars, ground for parades, manœuvres.

1II.—Classes of people, castes, temperament, numbers,

elements of disturbance, &c.

1V.—Lines of communication, quality of roads, encamping grounds and wells attached, rivers how crossed, mode of travelling, charges for daks, length of railway platforms at various stations on the lines, &c.

V.—Water-supply, number of wells, quality of water, &c.

VI.—Normal strength of garrison, barrack accommodation, soldiers' gardens, artillery and infantry ranges, sanitaria, bungalow accommodation, staff hospitals, prisoners and cells, commissariat lines, godowns, &c., public offices, arsenals or depôts, hut accommodation for Native troops, &c.

Railways.

Reports on the railways running through this Prosidency are also being compiled. The following have already been printed:—

The B. B. & C. I. Line from Surat to Wadhwan.

His Highness the Gáckwár of Baroda's from Miágám to Bhadurpur.

Western Rajputána State Railway from Ahmedabad to Pálanpur, by Captain D. Dean-Pitt, R.A.

The Holkar and Sindiah-Neemuch State Railway, Part I, Khundwa to Neemuch, by Major J. T. Watling.

Surveys.

A map showing the whole of the road communications in the Presidency has been compiled, and will be published.

Encamping Grounds,

To prevent inconvenience or danger to the troops using encamping grounds on the different lines of communication by road, steps are being taken to have them properly defined and marked, their cleanliness attended to, and the water-supply from wells and rivers carefully protected.

Army Signalling. In this important branch of military instruction 8 officers and 32 non-commissioned officers and men, British troops, and 2 officers and 27 non-commissioned officers and men, Native troops, have qualified during the year under report. The numbers qualifying are yearly increasing, and instruction in the Native Army is gradually being extended. The proposal to equip Native regiments with signalling apparatus is under the consideration of the Government of India.

Military Telegraphy. In July, 1881, a class for the instruction of non-commissioned officers and men, British troops, in electric telegraphy was established at Poona, and 22 men have obtained certificates of qualification.

137 Chap. III. PROTECTION, Lock

Hospitals.

The rules for the prevention of venereal disease have been steadily enforced, and supervision on the part of the police in detecting illicit prestitution has been vigilantly exercised. average ratio of admissions into hospital from venereal disease, per 1,000 of European troops, for the year ended 31st December 1881 was 235.50, showing a decrease of 29.03 as compared with the previous year; the station of Aden is credited with the lowest ratio (57:42), while Devláli (451:86) and Sátára (753:25) furnished by far the highest.

First class lock hospitals are maintained at Belgaum, Karáchi, Mhow, Nasirabad and Poons, and second class hospitals at Aden, Ahmedabad, Ahmednagar, Decsa, Devláli, Kirkee and Neemuch. The cost of their maintenance during the year 1881 was Rs. 31,426, of which Rs. 15,169 were contributed by Government and Rs. 16,257 by cantonment funds. This expenditure is about Rs. 5,270 less than the average expenditure for

the previous four years.

The number of horses cast in 1881-82 was 164, being 130 less than in the previous year. Of these 103 were cast for age and lameness, 36 for unfitness for service, 25, accidental cases of disease, total 164, being 8.28 of the average strength. average age of the horses cast is 14 years 4.84 months, and their length of service 9 years 7.90 months.

The total number of deaths in 1881-82 was 45, being 2.26 of the average strength, and includes horses that were des-The number of deaths is much less than last year when the number was 180, but on this point the Inspecting Veterinary Surgeon observes :- "Last year the average strength was somewhat greater, and the casualties of field service must be considered." The number of deaths from preventable causes shows a decrease on last year's return, and is noticed with satisfaction by His Excellency the Commander-in-Chief. Inspecting Veterinary Surgeon remarks in respect of this class of casualties: "Not that those preventable are always strictly so, but after the event we can sometimes see how they could have been avoided," and it is hoped that the experience so obtained will be turned to good account.

The Adjutant General observes that the introduction of the fore-foot picketing system has been much delayed, and the hope expressed in his letter of 30th June last, that accidents arising from preventable causes would be considerably lessened, has not yet been realised.

From non-preventable causes there were 23 deaths, which do not call for remark.

The number of horses admitted for treatment during the year of report was 1,126. Of these 43 were for castration, leaving 1,089 as 'ordinary sick', a decrease on the number returned last year which is accounted for in the same way as the diminution in the number of deaths. An increase of 68 cases of lameness as compared with the previous year is attributed to the fact that they were all admitted for treatment in cantonments, which was not the case last year when horses were on service, and when in slight cases they were necessarily kept at their duty.

Veterinary.

Marine.

European Seamon.

The number of European seamen shipped and discharged during the year amounts to 4,539 as compared with the figures of the previous year (4,682), or a decrease of 143 only, which is owing to the decrease in the number of sailing vessels arriving at this port. Steam vessels do not stay sufficiently long in port to enable their crews to get discontented, as is the case in sailing vessels, which latter rarely leave port without discharging one or more members of the crew.

Distressed European Seamen.

The number of seamen sent to the United Kingdom under this head is 12 as compared with 19 of the previous year,—5 at their own expense and 7 as being incapable of doing duty through sickness.

Subsistence of Distressed Seamen.

The number subsisted under this head is 13 as compared with the 63 of the previous year, or a decrease of 50 men; and the charges incurred on their behalf amounts to Rs. 222 as against Rs. 902.

Seamen Deserters.

There have been 70 cases of desertion against 42 cases of the previous year,—a state of things that must be accepted as the inevitable result of the large increased use of the Prince's Dock, where it is merely a question of walking ashore at any time. No deserter has had any consideration shown to him in any way; in all cases they were refused admission to the Sailors' Home as distressed seamen. Many found temporary employment as stevedores' assistants, or worked for their keep on board vessels in the Prince's Dock, and finally shipped, very often at less wages than they deliberately ran away from.

Deposits discharge.

The sum of Rs. 13,051 was deposited for safe custody during by Seamon on the year, being a decrease of Rs. 2,473 as compared with the previous year's figures of Rs. 15,524; increase of remittances made by seamen amount to Rs. 2,071 above the year previous, which is due to the fact of the Government Torpedo boats' crew which were discharged here remitting the most of their wages to the friends the moment they obtained employment in other vessels.

> The abolition of advance notes has proved a failure; there have been a few cases of seamen shipping without receiving any monies in any shape or form, but they form a very small percentage of the seamen coming to this port, and in many cases there appears to have been a dead lock, as in many articles of agreement the advance of wages appears pure and simple, the Act of prohibition not withstanding; whilst in other agreements stipulations appear that for the first month the rate of

wages shall be Is. per month from date of joining, at the expiration of which the regular wages commence.

There is no doubt that the bitterest opponent to the measure calculated to improve the condition of the seaman has been the seaman himself, backed by the boarding houses and crimps, and a return to the advance note is suggested as preferable to the existing state of affairs, which does not benefit seamen as a body, but betters the condition of those men against whom the Act was levelled in the interests of the seafaring class who support them. In this port it is only a change so far that an advance note is called by another name and given in various shapes which do not benefit those it was intended to serve.

The number of Native seamen shipped and discharged amounted to 34,189, or the large increase of 5,028 men over and above the figures of the previous year, when the total reached 29,161 men. There has been a great domand for Native seamen. Some 40 or 50,000 tons of new vessels, principally P. & O. steamers, have been supplied with Native crows from this port, and in very many cases the crews have been taken to England as passengers to join vessels just launched.

Owing to an organised strike amongst the Italian seamen at Genoa, the office at the instance of the Italian Consul and the masters of the Rubbatino steamers supplied Native crews for the engineer's department of those vessels: the experiment proved satisfactory in every way to all concerned, and there have been no complaints made by any of the Native seamen of any interference with them on the part of the men whose services the Rubbatino Company dispensed with until such time as they felt inclined to agree to the terms offered by their employers.

The origin of the strike lay in the fact of the Italian Government insisting on the carrying of certain apprentices in the engine-room of each subsidised steamer, and to which arrangement the Italian firemen and coal-trimmers objected, on the grounds that the skilled workmen would increase in numbers much more rapidly than the demand for their services, and, as a natural result, many of them would be out of employment at various periods owing to the supply being in excess of the demand.

As was pointed out by several of the masters of the Italian steamers, the men themselves felt too secure in their monopoly of employment in the vessels of the Rubbatino Lane, and began to dictate terms to the various commanders which could not be listened to, and with the permission of the Italian Government an appeal was made to this department for assistance in the shape of Native firemen and coal-trimmers, whose appearance in Genoa appears to have had the effect of causing the complete submission of the discontents and of their agreeing to accept much less favourable terms than were offered to them in the first instance.

Native Seamen. Messrs. Mackinnon, Mackenzie have forwarded an extract of a letter which it is interesting to notice:—

"Captain Fife of the Compta gives us an excellant report of the men you sent him, which is very satisfactory. They were physically well, able to stand the voyage, and they did their work faithfully. We hope you will be equally successful in getting good men for the Comarta"

And the Shipping Master gives the following opinion:-

"The many visits I have paid to the Prince's Dock and the scenes I have witnessed there amongst European crews have convinced me that the time is rapidly approaching when European crews, in the regular trading steamers to this port, will be the exception, the many conversations I have had with European sailors and firemen having elicited the reluctant confession that the rapidly approaching changes of crews is their own fault, and that they have nobody to blame but themselves."

Fines inflicted for offences afloat. The total sum of fines inflicted for offences afloat and collected on behalf of Government, under the clauses mutually agreed to and printed on the back of each agreement, amounted to Rs. 689 against the previous year's total of Rs. 553, or an increase of Rs. 136.

The Shipping Master remarks "that constant overlooking the minor offences provided for under the clauses referred to, is anything but just to the well-conducted Native seaman who does not give any trouble, and who ought not to be treated on equal terms with those who commit many offences afloat, which ought to call forth the fines provided for in such cases, and thus offer a premium on good conduct."

Revenue and Expenditure. The gross revenue for the official year under report amounts to Rs. 34,606, or an increase of Rs. 2,025.

The net revenue reaches a total of Rs. 22,196.

The expenditure of this department shows Rs. 12,410 as compared with Rs. 14,086 for the previous year, a decrease of Rs. 1,675.

BOMBAY PORT TRUST.

The results of 1881-82 were very different from those which had been anticipated, being far more favourable, owing chiefly to the great increase in the export of grain and seeds.

There was an excess of revenue in 1881-82 over that of 1880-81 amounting to over 92 lákhs, of which more than 6 lákhs was on account of the Prince's Dock.

And also an excess of expenditure in 1881-82 over that of 1880-81, but amounting to less than 12 lakhs, the final result being better in 1881-82 by nearly 81 lákhs.

The area of leased land on the Elphinstone and Mody Bay Elphinstone Estates rose from 73,869 square yards in 1880-81 to 115,399 and Mody Bay square yards in 1881-82, and the rent from Rs. 69,267 to Rs. 96,441.

Estates.

A proposal was made in March 1882 to provide, at the cost of the Trust, an additional footbridge over the G. I. P. Railway about half way between the Masjid and Elphinstone Bridges, where it is very much wanted, and the necessary arrangements This bridge will probably make the have since been made. Trustees' land thereabouts still more sought after.

A large income, Rs. 73,450, was again obtained from the rent charged for storage of coal, the quantity imported in 1881-82 having been even greater than in 1880-81. To this is greatly due the increase in the receipts for temporary ground rents on the Elphinstone Estate from Rs. 1,09,757 in 1880-81 to Rs. 1,44,400 in 1881-82.

There has again been a large increase in the revenue from the ground and buildings on the Elphinstone and Mody Bay Estates, as shown by the figures given below:--

	Ground Rent.	Warehouse Rent.	Shed Reut.	Total.
Elphinstone Estate.	Rs.	Rs.	Rs.	Rs.

The charge for space in the Ryan Grain Market had previously been per bag stowed; but, this proving an unsatisfactory arrangement, it was changed to a charge for the area occupied.

Ryan Grain Market.

The revenue at the Custom House Bandar was in 1881-82 Rs. 1,01,946 against Rs. 1,50,802, being less by Rs. 48,856. This was chiefly owing to the very great diversion of traffic, including that of the P. & O. Company, to the Prince's Dock.

Custom House Bandar.

The imports of sugar amounted to 33,618 tons against 45,026 tons in 1880-81, being less by 11,408 tons; but the quantity imported in 1880-81 was quite unusual.

Sugar.

The exports of opium were 22,166 chests only, against 34,208 in 1880-81, being less by 12,042 chests. The landing and shipping rates were reduced from Rs. 1-6 to Rs. 1-4 per chest.

Opium,

The receipts at the Apollo Reclamation, including the Trust's Apollo Reclathe Cotton Green fees, amounted to Rs. 52,665 against

Rs. 28,219 in 1880-81, being apparently an increase of Rs. 24,446, but this was greatly, owing to a large amount of fees for 1880-81 not having been paid till 1881-82.

Cotton.

The cotton exported during the year was as below:-

* •	1881-82. Bales.	1880-81. Bales.	Increase. Bales.	Decrease. Bales.
From—				
Prince's Dock	380,374	142,739	237,635

Victoria Bandar by Indian P.		,	-,	
Company (half wharfage)	10,466	12,036	•••••	1,570
Totals	1,347,318	1.021,145	327,743	1,570
Being in excess of 1880-81 by bales	2,021,010	-,,	0_,,. 00	326,173
				327,743

The Sassoon Dock continued to be used merely as a boat basin, and the railway siding for troops and for cotton brought by the G. I. P. Railway.

Capital Account. The table given below shows the financial results obtained from the principal of the properties acquired in 1879-80, the percentages being given for 1880-81 also:—

	Price.	Price. Receipts.		Balance.	alance. Percentage on Price.	
	Rs.	Rs.	Repairs. Rs.	Rs.	1881-82.	1880-81.
Sassoon Dock	20,00,000	96,343	9,015	87,328	4.3	4.2
Colába Co.'s Bandars	18,00,000	52,683	4,725	47,958	2.6	2.3
Màzgaon Reclamation	18,00,000	90,221	8,186	82,035	4.5	2.5
Frere Land Com-	• •	-		•		
pany's Reclamation	8,00,000	30,115	4,2 56	25,8 59	3.2	2.6

It will be seen from this that in every case the percentage was better than in the previous year, and in the case of the Mázgaon Reclamation considerably so, there being a rise from 2.5 to 4.5. This was owing to the removal of almost the entire trade in bricks, tiles, sand and lime from the Elphinstone Estate to Mázgaon.

Dangerous Goods, The Trustees passed a resolution forbidding the storage of hazardous goods in warchouses set apart for ordinary duty-paid and warrant goods, either at the Fort or at Prince's Dock.

Fire Brigade.

The arrangements referred to in last year's report as to the organisation of a fire brigade at the dock have been carried out, the establishment entertained, and quarters for the men provided close to the dock, so that they may always be at hand in case of fire. The necessary appliances have also been supplied.

Shipping.

The arrivals during the year, exclusive of country craft and of coasting and ferry steamers under 200 tons, were—

Steamers 868 aggregating Ships 153 ,,	•••	1,091,370 136,947
1,021 aggregating		1,228,317

while in 1880-81 the numbers were-Steamers 737 aggregating 894,275 Ships ... 243 243,081 980 aggregating 1.137.356

It seems, therefore, that there was during 1881-82 a considerable falling off in sailing ships, both in number (90) and in tonnage (106,134), but that the larger number (131) and tonnage (197,095) of the steamers far more than compensated for this.

It having been brought to notice that the pilotage of native craft at Bombay was undesirable and impossible, the Indian Ports Act was amended so as to exclude native craft from the operation of the section rendering pilotage compulsory.

The provision of three new transit sheds on the east wharf and of 8 additional 30-cwt. hydraulic cranes on the wharves, making 43 in all, greatly facilitated operations.

Improvements, Prince's Dock.

A small auxiliary hydraulic engine was provided, at the dock. It is capable of working the dock gates or about 5 of the 30-cwt. cranes, and is thus often sufficient at night, on Sundays, &c., and allows the large engines to be dispensed with on such occasions.

The widening of the jetty shed to the extent of 50 feet, the erection of a shed (H) west of the hydraulic engine-house, and the addition of an upper storey to (E) shed on the west wharf, were all taken in hand during the year, but not finished. They are all likely to prove of great value.

The transit sheds formerly opened direct on the public roads outside of the dock and customs limits, an arrangement which greatly facilitated the theft of goods from the sheds. The dock fences have now been thrown out sufficiently to leave a good road on the inner side of the fence, and this is found to be a great improvement.

The exports from the dock of grain, seeds and cotton increased Prince's Dock very geatly during the year, being as below: Exports.

				1880-81.	1881-82	Increase.
Grain	•••	•••	Tons	88,592	453,863	365,271
Seeds	•••	•••	19	70,557	125,683	55,126
Cotton			Bales	142.739	380.374	237,635

From this it will be seen that the grain exported from the dock amounted to more than five times as much as in 1880-81, the seeds to more than 75 per cent. extra, and the cotton to nearly 2‡ times as much.

The chief imports were, as last year, piece-goods 268,998 packages and iron 37,726 tons, showing increases over 1880-81 of 69,185 packages and 6,988 tons respectively.

Imports.

The town duties collected at the dock were in 1880-81 and Town Duties. 1881-82 Rs. 82,028 and Rs. 67,362 respectively. The total collections by the Port Trust for the Municipality at the bandars

and the Prince's Dock on account of town duties amounted to Rs. 6,53,319 against Rs. 6,90,117 in the previous year.

There was a considerable increase in wines and spirits, but a total falling off of Rs. 36,798, mainly owing to the much smaller importations of sugar, jagree and ghee.

Dock Dues.

The dock dues on vessels amounted to Rs. 92,462, against Rs. 27,607 in 1880-81.

Engineering Works.

The most important engineering works carried out, wholly or in part, during the year were:—

The warehouse to be leased to Messrs. Ralli Brothers was finished and occupied. It is near the north-west entrance to the dock. No timber has been used in the construction, and provision has been made for adding an upper storey if desired. It cost Rs. 41,303.

Slipway at Sassoon Dock.

The Sassoon Dock was during the year used by Government for trooping purposes, the use of the Carnac Bandar for that purpose having, to the great benefit both of the troops and of the trade, been finally abandoned for embarking and disembarking troops. Two slipways have been made on the south side of the dock, in order to facilitate landing and shipping, and considerable improvements have been effected to certain buildings which have been made available for the use of the troops, these works being carried out at the cost of Government, but the Trust paying for such deepening of the dock and of the channel leading to it as was necessary. Cost Rs. 32,570, paid for by Government.

Sunk Rock Lighthouse. In last year's report it was stated that the foundations of the Sunk Rock Lighthouse were in progress. The whole of the masonry was finished during 1881-82, and the work is now only waiting for the apparatus from England to be completed, when the Inner Light Vessel will no longer be required. Estimate Rs. 1,44,303; expended up to the end of 1881-82 Rs. 45,607.

The Sunk Rock light will be exhibited simultaneously with the transfer of the flashing light now at the Prongs to Kennery, and of the fixed light now at Kennery to the Prongs. The date for these changes cannot be fixed until the arrival of the apparatus for the Sunk Rock light.

Bonded Warehouse, Prince's Dock.

The new upper-storeyed bonded warehouse at the Prince's Dock was completed in 1881-82. It is built according to the latest principles of fire-proof construction. It has not yet been necessary to use it for bonded goods, but it has been of great use as a warehouse for storing ordinary warrant goods, and has cost Rs. 1,22,550.

Finance,

In the last report it was mentioned that, at the beginning of 1881-82, 7 lakes had been taken up at 1001 on 4 per cent. debentures, running for seven years. This led to Government being asked to further amend the Port Trust Act so as to enable the Trustees to borrow with a view to paying off existing or future loans; and this was done, but not in time to allow advan-

tage to be taken of the favourable state of the money market which existed when the 7 takhs loan was taken up, and for some time afterwards, and a sufficiently favourable opportunity has not since presented itself.

The object was to pay off the Government dock loan, about 76 lakhs, which now stands at 41 per cent., and also some, at any rate, of the original debt to Government, amounting to about 211 lákhs, which is now at 4 per cent., but for which from June 1883 44 per cent. will be payable.

It was proposed to take steps to get the Port Trust Bonds quoted on the London Stock Exchange, and thus facilitate the taking up of a large amount at a low rate of interest, but before doing this it was decided to apply to Government to formally guarantee the loans, both capital and interest; and, the Governments of Bombay and India fully agreeing to this, the Government of India strongly recommended the Secretary of State to sanction the arrangement, but this he declined to do.

The work of extending the tramway line from the Crawford Market over the Carnac Bridge to the Frere Road, and along it to the Prince's Dock was taken in hand. It is hoped that ere long a line will be laid connecting this with that near the Mint, which would, it is thought, be a still greater convenience to persons having business at the dock.

Such a line might also, it is thought, possibly be used with advantage for carrying cotton from the presses at Colába to the Prince's Dock, perhaps only at night, should such use by day interfere too much with the passenger traffic.

The Trustees decided to apply about 2 lakhs in 1882-83 Reduction of towards the reduction of rates as below. The former rate for shipping grain and seeds in the dock was 9 annas a ton. Such cargo is easily handled, and there is little trouble in connection with its shipment. It also appeared to be desirable by every legitimate means to foster a trade which promises to do so much for the port, and the Trustees, therefore, reduced the shipping rate from 9 annas to 6 annas per ton, which it was calculated would mean a remission of revenue in 1882-83 to the extent of Rs. 88,741.

When the private foreshore properties were acquired, the wharfage rates on certain imports which could best bear enhancement were increased; but the state of the Trust funds having so far improved as apparently to admit of reductions, it seemed to be only fair to reduce as many of these items as possible to the former rates, and this was accordingly done, the estimated remission of revenue on this account in 1882-83 being Rs. 87,286.

This amount, which is chiefly a concession to the coasting trade, is, it will be seen, very much the same as that of the shipping charges on grain and seeds, Rs. 88,741, which is a concession to the trade with Europe.

It was further decided to make certain changes in the dock fees on goods chargeable by measurement, so as to make the Tramways.

Rates.

system correspond with that to be followed under the reductions mentioned above with regard to wharfage fees on such goods.

This change it was estimated would involve a further remission of Rs. 6,000 per annum.

In 1874 the question of remitting wharfage fees on passengers' baggage was before the Board, but the money could not be spared. The collection of these fees cannot easily be checked, they are vexatious to passengers, and the revenue derived from them is only Rs. 12,000 per annum, and they were accordingly abolished from the 1st April 1882.

The remissions referred to were thus calculated to amount to Rs. 1,94,027 as below:—

Dock charges on grain and seed	Rs.	88,741
Wharfage fees	"	87,286
Dock fees on goods chargeable by measurem	ent."	6,000
Wharfage fees on passengers' baggage	,,	12,000

Rs. 1,94,027

Pensions.

After a very long and careful consideration of the subject the Trustees finally approved of a set of rules for the payment of pensions to certain of their servants, and for the establishment and working of a provident fund.

Wet Docks.

A special committee was appointed to consider and report upon the question of increased wet-dock accommodation, whether necessary, if so, to what extent, and the manner in which it should be provided. These very important matters are still under consideration, alternative plans and estimates being prepared, &c.

Mr. Ormiston,

Mr. Thomas Ormiston, C.I.E., the Consulting Engineer to the Trust, died at Weston, Isle of Wight. The services which Mr. Ormiston rendered to the Trust were of the greatest possible value, and all the works which the Trustees have carried out bear the impress of his mind.

While fully endorsing this, His Excellency the Governor in Council felt that he could not do better than repeat the high and well-merited eulogium which was passed by this Government in Government Resolution No. 80, dated 4th February 1880, on the report of the completion of the Prince's Dock:—

"In thus reviewing the main features of this great work which His Excellency in Council confidently believes will be found in time to be of the greatest benefit to the mercantile and shipping interests of Bombay, His Excellency in Council desires to place on record his high sense of the value of the services rendered by Mr. Thomas Ormiston, who designed this most important work, and under whose superintendence it has been carried out. Before Mr. Ormiston came to India he had attained distinction on the works of the Clyde Navigation, those of Glasgow Harbour and in Plymouth Sound. In India he commenced the Elphinstone Reclamation and constructed the fine Lighthouse (the Prongs) at Bombay. His present achievement in constructing the Prince's Dock is an earnest of future successful engineering work. His public services will cause

his name to be enrolled amongst the eminent men of the time, and will advance the material prosperity of the country whose sovereign has already evinced her appreciation of the services thus rendered by conferring on Mr. Ormiston the high distinction of admission into the Order of the Indian Empire."

KARÁCHI HARBOUR BOARD.

The Government building yard and the plot in the occupation Receipts and of Pestonji Dubash has been transferred to the control of the Expenditure. Board, and will render the circuit of the foreshore property more complete.

The total receipts of the Board from all sources amount to Rs. 4,48,105, including the opening balance, and the expenditure to Rs. 3,76,672, leaving a credit balance at the end of the year of Rs. 71,433. The receipts include Rs. 51,400 on loan and Rs. 14,400, a credit adjustment. The constitution of the war has largely affected the port dues, but this loss was counteracted by the rapid increase of the trade in wheat. The abnormal expenses during the war do not recur in this year and the amount spent in public works has been curtailed.

The following table gives the number of square-rigged vessels Operations of that entered and left the port as compared with the previous year :--

the year.

	1880-81.	1881-82
In	337	288
Out	360	285

showing a total decrease of 124 vessels.

Of this number, 32 vessels were taken up for troops; 24 vessels were taken up for the export of wheat, the remainder being mail steamers and others engaged in the conveyance of general cargoes.

19,600 troops and followers, 3,600 horses and ponies, 118 bullocks, 82 sheep, 15 guns and 16 carriages, 78½ lákhs of treasure, about 5,000 maunds of baggage, 1,800 tons of stores, 200 tons of ammunition and 1,300 hogsheads of porter and rum were landed and shipped during the year by the Port Department, the whole being carried out as successfully, expeditiously, and without accident or casualty as in the previous year, notwithstanding the same want of suitable plant for the work.

None of Her Majesty's troop-ships arrived during the year, but the objection raised by their commanders in the preceding year to enter the harbour owing to the want of suitable moorings, is to some extent removed by the Board having obtained a set of moorings similar to those used by such vessels in Bombay and suitable in weight and strength to ensure perfect security in all weathers.

Owing to outbreak of cholera at the ports of Surat and Bombay and the continuance of plague in Mesopotamia, quarantine rules were enforced at intervals of nearly ten months of the year.

Wharfage,

In the Wharfage Department the revenue realised at the various landing places is given below:—

	€.	1881-82.
		Rs.

	Total	1.44.188

The revenue of the Native Jetty, where the bulk of the trade of the port passes, shows an increase of Rs. 27,937, and, as already explained, is chiefly attributable to the large business done in the export of wheat to Home ports, which became unusually active in September 1881, and in itself yielded a revenue of Rs. 32,472. The grain trade, including wheat, during the year, compared with 1880-81, shows a total increase, in both imports and exports, of 99,285 tons, the income derived therefrom amounting to Rs. 37,669.

Under "Imports" there is a decrease of traffic at the Native Jetty in almost all articles, with the exception of grain, piecegoods, wool, firewood and timber, in which there is a slight increase.

The "Exports", on the other hand, show an increase in almost all articles, with the exception of ghee, hides, oil and oil-seeds.

The general result of the year shows an increase in receipts of Rs. 1,248.

The Native Jetty was used by 2,922 vessels with a registered tonnage of 93,094 tons.

The want of room was just as much felt as during the preceding year, but the question of providing more accommodation is held in abeyance until it has been fully ascertained to what extent the present trade at the Jetty will be diverted to the "Merewether" Pier. This matter will probably soon be set at rest, as the pier is expected to be opened for traffic in July 1882.

The crane accommodation has been increased during the year by the addition of a 10-ton crane. There are now, in all, 7 cranes, and they have been found, so far, ample for the wants of the trade passing over the Jetty.

Public Works, Dredging and other works were carried out by the Port Engineer from Imperial and Provincial Funds at a total cost of Rs. 1,30,174.

The chief works executed during the year for the Board were:—

- (a). The Mercwetter Ship Pier.—As mentioned in the report for 1880-81, the work was put in hand in the early part of this year, and was expected to be completed in July 1882.
- (b). The improvement to the Native Boat Channel by dredging a cut and extending the training groyne near its mouth above Keamári was undertaken during the year, at a cost of Rs. 25,000.
- (c). Peons' Quarters and Gate-keepers' Room.—Cost Rs. 2,406.
- (d). Orane—A 10-ton hand cane was purchased and erected on the south wall of the Native Jetty at a total cost of Rs. 1,702.
- (e). Powder Magazine.—A building capable of holding 3,000 lbs. of powder in casks was constructed on the west shore of the lower harbour near the Quarantino building at a cost of Rs. 730.
- (f). Open Goods Shed.—The sides of the open goods shed on the Native Jetty were closed in temporarily by "chupper"; cost Rs. 174.

CHAP. IV.—PRODUCTION AND DISTRIBUTION.

Agriculture.

Cotton.

THE details regarding culturable land and the crops with which the land is covered are to be found in Appendix IV, A. and bájri are the staple products and occupy about half the area cultivated. Rice and wheat also occupy very considerable areas. A special table regarding the cultivation of cotton is also printed in the Appendix, from which it will be seen that there were 4,811,146 acres occupied with this plant, and that the yield was estimated at 2,578,555 cwts., which gives an average of 54 cwt. to each acre. These figures show that the area planted with cotton was more by nearly 618,000 acres than in 1880-81 and that the yield per acre was also better by '07 cwt., although much reliance cannot be placed on the estimate of outturn. The area planted in 1880-81 was also higher than the previous year by over 435,000 acres, and it would seem that in two years the area under cotton has increased by more than a million of acres. A large area was thrown out of cotton cultivation in Ahmedabad and Broach, where it is said that the sowing season was not very favourable, and the rayats hesitated to plant, but those who did sow benefited extremely by the later rains; for, although the area in Ahmedabad was contracted by nearly 48,000 acres, the yield of the remainder was more than equal to the outturn in 1880-81. The same fact was also observed in Dhárwár, but there the smaller area under indigenous cotton appears to be more than accounted for by the larger area under exotic cotton. In Belgaum also there was a large decrease of the area under indigenous cotton, but a very small increase under exotic. In Kaládgi, on the other hand, a small area under exotic cotton was displaced by indigenous varieties. But the greatest increase of the area under indigenous cotton has occurred in Káthiáwár and Cutch, where 420,000 more acres were planted than in 1880-81. There has also been a conspicuous increase in the Central Division, notably in Khandesh and Ahmednagar, and in Kaladgi in the Southern Division. The area in Sind has also increased considerably. The outturn of indigenous cotton was 54 cwt. per acre, while that of exotic cotton has been estimated at 46 cwt. It is said that with exotic cotton the plants are more delicate and the crop very precarious.

Advances to Cultivators. A very small sum of Rs. 48,267 has been advanced to cultivators to assist them in the purchase of seed and cattle and in making permanent improvements, such as wells, and of this the major

part, Rs. 34,711, has been advanced in Sind to Zamindárs and persons in fairly good position to assist them in taking up the land along the new canals and in making improvements in Lar-Various reasons are assigned for the general neglect of the rayats in the Presidency proper to apply for advances which the Collectors had been instructed to make, and the chief reason appears to be that a succession of good harvests has placed them beyond the necessity of applying to Government for loans and that their credit is now again good enough for them to obtain money from the village savkar. It is also said that there is a general belief that money borrowed from Government must be repaid the very next year, and also that, apart from the formality and delay attendant upon petitions to the Collector, there is a dislike to the inquisitive nature of the inquiries made regarding the application of the loan; and it is further suggested that being in the hands of money-lenders they dare not apply for a loan from Government for fear it may excite the creditors to take extreme steps for the immediate recovery of outstandings and that the punctuality with which the Government loans are recovered rather deters people from taking them. In consequence of the failure of crops in the north of Ahmednagar, Government placed a special sum of Rs. 30,000 at the disposal of the Collector, but less than Rs. 4,000 was borrowed; and in Gujarát, Kolába, Kánara and Belgaum, and Dhárwár not even a rupee was applied for.

Notwithstanding the cattle-disease which appears to have affected great part of Ahmedabad and Kaira, the Konkan, Sátára and Kaládgi, the returns uniformly show that there has been a considerable increase in cattle in the districts. In Gujarát the number increased owing to the abundance of fodder, and in Poona the number is rapidly rising to the figure before the famine. In Belgaum the increase has been steadily progressing for the last four years, and it is said that the number is now equal or nearly equal to the full number required for cultivation. So it is in Dhárwár. In Sind, although there are no reliable figures, the number of transport cattle sold after the war must have caused a considerable increase in the Province, and the cattle are reported to be in very good condition from the abundance of grass.

There has been a great mortality among sheep in Poona from small-pox and there has been a sensible decrease in carts in Surat and Ahmedabad. If the returns are to be relied upon, there has been a remarkable increase of over 100,000 in the number of sheep and goats in Násik and Khándesh and of 21,000 cattle in Násik. In spite of rinderpest of an incurable type in Sátára and Rtanágiri the stock increased to some extent. In Kánara also cattle-disease affected the country to a very large extent and even the wild bison were infected. The Collector suggests that the local officers should have power to segregate diseased animals. In Nagar, Kaládgi and Sholápur there was a very satisfactory increase in cattle, and in the last-named district a great increase in the number of carts.

The Maheji Exhibition was, on the whole, better appreciated and more successful than that of last year. There was a fair

Agricultural Stock.

Máheji Exhibition.

competition for prizes and a good attendance at the show, due to the agricultural season having been a favourable one. The show of horses was good. Owing to liberal prizes having been offered, a large number of exhibitors came from the neighbouring districts of Ahmednagar and Poona, and most of the higher prizes were carried away by persons from the Poona District. The mares hardly merited phizes, which, however, were given as an encouragement to the exhibitors, who were said to be poor. Mule breeding has not yet made any progress in Khandesh, and at present there is only one donkey stallion in the district.

Cattle Show.

The cattle show was unusually good. A large number of goats were for the first time exhibited, but no sheep were brought to the show except from the Government Model Farm. Some of the cows were creditable specimens of home-bred animals of mixed blood, and the show indicated a growing interest in the keeping of cows for milking purposes. The services of the bulls belonging to the Government Farm have been in great demand, and the result was an apparent improvement in the cattle brought to the exhibition from the Khandesh District.

Cotton.

Some of the exhibitors of cotton came from considerable distances, and a greater number of specimens were exhibited than in 1881, although in comparison with previous years the exhibits showed a decrease. This falling off is attributed to the low prizes awarded since last year. In previous years the highest prize consisted of a gold medal worth Rs. 100, while this year the highest prize for this class of articles was worth only Rs. 15. Better results are expected from the increase, as suggested by the committee, in the number and amount of prizes under the head of "Cotton" if funds can be made available. In the exhibits Food-grains. under food-grains there was an increase as compared with those of any one of the last ten years, but the competitors came for the most part from the Páchora Táluka. Several prizes for articles under this class were awarded to a late pupil of the Government Model Farm. The exhibits in tobacco are said to have been of fair quality, but the curing was as usual defective. The samples of tobacco and cigars, which were sent for exhibition only and not for competition by the Desái of Nadiád, were superior in all respects to the other specimens of this kind at the show. The curing was even, and the leaves full grown. It is remarked,

Tobacco,

Potatoes.

however, that the quality might not suit European tastes. Among vegetables and fruits an exhibit of potatoes only deserves mention. These potatoes were grown at Chalisgaon in the bed of a river. and they are believed to be the first grown in Khandesh outside the Model Farm. The size was small, but the Collector says that they had a fair flavour.

EXPERIMENTAL FARMS.

There are two experimental farms maintained by Government, one at Bhadgaon in Khandesh and the other at Hyderabad in Sind.

Bhadgaon Farm.

The outturn of the kharif crop raised at Bhadgaon was affected by the unseasonable rainfall and the later crops were injured by locusts or grasshoppers. The rabi or winter crop was also not

very productive. The outturn of cotton, however, exceeded the most sanguine expectations, the average yield of clean cotton per acre being 117 lbs. The highest yield of the Khandesh American was 228 lbs., and of Hinganghat 139 lbs. per acre, while in the previous year the yield per acre of the two varieties was 82 lbs. and 150 lbs. respectively. The entire crup was sold, and realised a net return of Rs. 251 per acre. The American variety, which was cleaned by the saw-gin, was sold to local dealers at Rs. 5 per khandi above the highest rate paid for any other variety, and it was ascertained that the exporter paid for it Rs. 15 per khandi more than for good Khándesh, which places it considerably above the best saw-ginned Dhárwár and on a par with what is known in England as middling Orleans. It is observed that the pure seed annually distributed from the farm joined to such of the produce thereof as the people save, is visibly affecting the staple of the surrounding district, and it is stated that the demand for this seed has been much enhanced, and that the next crop in the district may fairly be expected to be of superior quality. Another agency which it is expected will create a preference for the superior variety is the introduction into Khandesh of the saw-gin, which is not adapted to cleaning short-stapled cottons.

It has now been established that potatoes can be cultivated with success in Khándesh, and as the demand for them is increasing, the cultivation of them may be expected to extend and to afford a substantial addition to the food supply of the district. The consignment of seed potatoes which was sent out by the Secretary of State arrived too late for the local season, and had, besides, to contend against a failure of the water-supply. Still they yielded sufficient seed for the next season, and this stock has been further enhanced by the propagation of plants from shoots sprouting from each eye which were removed and planted out, and a second and a third batch of sprouts were then successively removed, each set having provided 20 to 30 plants.

The experiment of cheese-making cannot be said as yet to have proved completely successful, but there seems a prospect of success being attained at no distant date.

A demand has sprung up for the cotton saw-gins exhibited at the farm which have been inspected by hundreds of merchants, and a supply will be sent to the farms as soon as the machines have been improved according to Dr. Forbes Watson's suggestions.

The crossing of the Khandesh and Aden sheep with the dumbas of Sind is likely to yield good results.

The financial result of the working of the farm was a loss of Rs. 69 during the year under report as against a profit of Rs. 1,557 of the previous year.

The site of the farm was removed to a place near Hyderabad, and the work of clearing the land commenced in April 1881. The ground, though suitable in every respect, was covered with channels and bunds, brick kilns, babul trees and scrub jungle, which had to be removed, and there was also much 'dub' grass, which it has been found very difficult to eradicate.

Farm.

About 38 acres were utilised for kharif crops, of which 9 acres and 13 gunthas were sown with Sindhi native and Warhadi cotton, the rest being devoted to bajri, jowari and sorgho. The Sindhi cottony ielded at the rate of 648 lbs. and the Warhadi 176 lbs. of seed cotton per acre as compared with 778 lbs. and 866 lbs. during the previous year. The decrease is explained as due partly to late sowing, partly to long-continued southerly breezes and partly also to the ravages of the greenfly. It is now established that Warhadi cotton is a less luxuriant variety of the Sindhi, incapable of yielding as much clear cotton per acre as the ordinary Sindhi plant.

The bájri and jowári crops also failed to a greater or less extent. The jowári, however, gave good cuttings of karbi, and sorgho was sold green and used as horse fodder. No rabi was sown at all during the year under report, as the ground had not been sufficiently prepared for it.

The financial condition of the farm, notwithstanding a nominal balance of Rs. 795 in its favour, is far from satisfactory. But the expenditure now incurred on account of works will not recur in future years, while the income of the farm must increase.

A class of boys belonging to the high school attends once a week for agricultural instruction, and another class of Zamíndárs' sons attends the farm daily, and the boys are reported to be rapidly advancing in practical work.

Sericulture.

Major Coussmaker has continued his interesting experiments in Tasar sericulture with better results, but yet without special satisfaction, as there were many deaths among the silk-worms for which he could not account. The whole season's collection amounted to 60,000 cocoons, double of what it was in 1880 and collected in the same way. The contribution of the Forest Department amounted to 58,000 against 17,000 in 1880, all gathered in the Northern Division. After being cleaned the result was 200 lbs. of clean cocoons for the two years, which was sent to an expert in England for report. About 1,000 cocoons were purchased direct from villagers in Ahmednagar, and besides the "Bher" tree they are to be found on the Ain, Sadra and Karanda. If the village grocer (Wani) could be induced to buy cocoons from the villagers in the same way as is done in the Central Provinces, the Tasar silk industry would soon be firmly established. The uses of this silk are rapidly increasing, and the demand is far in excess of the supply. One of the most important uses to which it has been applied is in the manufacture of seal cloth, which sells at a very high price. It is also found to be superior to mulberry silk for silk carpets, being lustrous, strong and peculiarly suitable for embroidery.

Several attempts have been made and have extended over many years to cultivate the mulberry silk-worm, all of which have failed. Major Coussmaker does not advocate the cultivation of this worm in the Deccan or the Southern Division. It might thrive during the rainy season, but it is doubtful if either the silk-worm or the mulberry tree could be kept in good health after the setting in of the east wind in the cold season and during the hot weather. Mr. Robertson, the Commissioner, C.D., devoted much time to experiments on this worm, but found the want of food to be a difficulty which could not be satisfactorily overcome in any manner.

Horse-Breeding.

The necessity of improving the breed of horses and of increasing their numbers and also of establishing a system of mule-breeding had long been recognised, and for many years a large stud of Government stallions has been maintained at a heavy outlay with somewhat disproportionate results. It has now been decided to place the entire control of all operations connected with horse-breeding and mule-breeding in the hands of a special officer, who will be required to devote his entire time and attention to the subject, and will endeavour to promote these objects, so that in course of time suitable remounts may be available for the native cavalry, and mules might be obtained for the purposes of military transport. The Department of Horse-breeding Operations has, therefore, been organised from the 1st August 1881, and will be maintained at an annual cost of Rs. 50,000.

3 English stallions—Norfolk trotters—were imported, 6 Arabs were bought, and 2 were presented to Government. Altogether there were 78 stallions, of which 41 were very good. The Poona and Ahmednagar horse-breeding district was inspected, and as the stallions were too much concentrated they were distributed, so as to bring them more within reach of the mares in these districts. 1,511 mares were inspected, of which 575 were branded with the broad-arrow as fit for horse-breeding, and without this mark they cannot be put to a Government horse stallion. 123 were marked with a D as suitable for mule-breeding, and 813 were rejected.

The number of mares covered during the year by the stallions was 2,403, which is equal to 33.94 mares per stallion. In the last three preceding years the total numbers were respectively 1,825, 1,881 and 2,185, from which it would appear that the demand for the stallions' services is constant and regular. The number of stock foaled during the year was reported to be only 111; but the returns are obviously incorrect, as there was no means by which accurate information could be obtained.

220 country-bred remounts were purchased for the native cavalry and police, and it is suggested that the practice of taking mares into the ranks might be stopped, as the horseproducing power of the country is lessened thereby.

Geldings are rarely to be met with, but in the late war the superiority of the Dhangar goldings from the Deccan and Khandesh was so manifest that they were believed to be a distinct species from the ordinary pony. It has, however, been found that the breeders keep no stallions, and merely let loose their mares near a village where they are covered by the common village pony. The colts so produced or bought are castrated whilst quite young, and as when they have been castrated they

are not tied up, they become straight-legged, thick-set, powerful, hardy little animals.

Mule-breeding is not making very rapid progress, the prejudices of the natives against it giving way but slowly. Still there are signs of improvement: 99 mares were covered by the donkey stallions in the year 1881, and the few mules resulting from the coverings of 1880 excite agood deal of curiosity and interest. Small prizes were given to all exhibitors of mule foals at the horse show as an encouragement. In 1880 the number of mares covered was only 37.

7 donkey stallions were employed during the year, and in addition the Native Chiefs of Bhavnagar, Gondal and Cutch maintain donkey stallions.

Horse Snows.

Poona.

The number of horses exhibited at the Poona Horse Show was 473 compared with 187 in 1880 and 271 in 1879. It is the highest figure reached since the show was instituted, and a marked improvement was observed in the quality of the animals. A large number of country-bred mares was exhibited suitable for breeding, or in foal, or with foal at foot by a Government stallion. The superiority of the produce of Government stallions was apparent, and indicates that the measures of Government to improve the breed of horses are bearing good fruit. Only 9 country-bred geldings were exhibited, and extra prizes were given to encourage castration, which has not yet become popular. The expenditure was Rs. 9,967, as a larger amount than usual was awarded in prizes.

The cattle show which had been discontinued since 1876 was revived in the year under report, but has not been very successful. Only 66 cattle were exhibited, and their quality was not very good.

Sirur.

The show at Sirúr was very successful; the number of animals exhibited being more than double the number exhibited at the previous show, and the quality having improved. The number of goldings was not large, but it is said that the practice of castration is being extended. Mule-breeding has made a commencement, and 14 mares certified to have been covered by a donkey stallion, and 2 promising mule foals were exhibited.

Dákor.

The first horse show at Dákor was held on the 4th March 1882, and, considering the short notice that was given, the results were encouraging. It is estimated that more than 600 horses were exhibited, and the services of the Government stallions, which were present, were utilised as largely as possible, and a large number of marcs were branded as fit for breeding. The expenditure amounted to Rs. 4,911. In future the show will be held at Ahmedabad, which is a more suitable place for a Gujarát horse show.

Rajkot.

The show was held in September in the hopes that it would become a fair, but this result was not attained. It was well attended, and 202 horses were shown as compared with 116 in 1880.

But the best stock was exhibited by the Chiefs who breed horses for their own stables and not for profit. The animals exhibited by private individuals were mostly of the poorest description, and in many instances there was some difficulty in finding any fit to take the money prizes after diplomas had been awarded to the Chiefs.

The Shikarpur show after being discontinued for two years has been revived, and was fairly sudcessful. The mares were generally good, and the ponies and galloways were spoken of favourably. 6 mules bred in the district competed, and it is said that Upper Sind promises to become an excellent field for mulebreeding.

Shikarpur.

The show of horses at the Maheji Fair was good, and a large number of exhibitors came from Ahmednagar and Poona, attracted by the liberal prizes. Most of the higher prizes were carried away by persons from the Poona District.

Maheji.

PRODUCTION AND DISTRI-BUTION.

Weather and Crops.

METEOROLOGY.

Storm Warning Service.

This service has been carried on on the same footing as in the previous year. Regular daily telegraphic reports were received from all the following stations, except Calicut, which sends no reports on Sundays:—

> Karáchi. Surat. Ratnágiri* Kárwár. Mangalore.

Calicut. Cochin. Negapatam. Madras. Masulipatam.

Colába Observatory.

The Colába Observatory, Bombay, also furnished regular daily reports. As soon as the code messages arrive they are translated into their corresponding instrumental readings which, after correction and reduction, are curved, charted and entered in a tabular daily report, a copy of which is usually ready before 4 o'clock in the afternoon. The information is furnished to the press and sometimes published in the daily papers.

Storm Signal Stations.

Four additional storm signal stations have been established during the year, viz., Goa, Daman, Bhávnagar Creok and Bhávnagar Bandar. The complete list now includes nine principal and seven subsidiary stations, and they have been furnished with cones and lanterns for making the signals, and placards printed in large type describing the character and meaning of the signals have been distributed to the various ports.

Tolegraphic communication between the Meteorological Office and the Central Telegraph Office has not yet been established, but it is understood that the connection will shortly be made by the Telegraph Department. The contemplated revision of the Meteorological Telegraph Code also still remains to be carried out, and the grave defect referred to last year, viz., the absence in the code of any provision for affording information as to the velocity of the wind at the time of observation, is still seriously felt.

Storms.

The past year was an eventful one with regard to storms. Between May 27th and June 3rd a most terrific cyclone crossed the Arabian Sea from East to West, but in no part of its course was it sufficiently near the West Coast of India to produce violent winds on land, although a tremendous swell was felt at almost every reporting station along the coast. The log of a ship involved in the storm records a barometric reading of 27.3 inches. at which point the index was stopped by the thermometer attached to the instrument, so that even this low reading does not give the actual minimum pressure of the cyclone.

^{*} Reports commenced on the 27th May 1881.

Another cyclone accompanied by heavy rainfall passed over Káthiáwár and Gutch on the 12th and 13th July, causing great destruction of house property. It also raised the force of the monsoon winds between Surat and Bombay to a violent gale, wrecking a mail boat in the Gulf of Cambay and disabling the S. S. "Calder", which had to put back to Bombay under the greatest difficulty, after having had some of the deck passengers washed overboard.

Another cyclonic disturbance occurred between the 11th and 17th November 1881. The centre of the barometric depression passed in a north-westerly direction between Madras and Negapatam over the Peninsula to Goa and onward over the Arabian Sea to the west of Karáchi. The first decided indications of this November storm were noticed in the daily telegraphic reports of the 12th, when special reports from additional stations were at once called for; but the additional information did not arrive in time to permit of warning tolegrams being issued to the ports to the southward of Bombay till the afternoon of the 13th, when the storm had already reached Goa. The fact that it had done so was not known at the Meteorological Office, however, till after office hours on the 13th. The warning signals were hoisted at Bombay and Bhávnagar on the morning of the 14th November; but though the influence of the cyclone was decidedly noticeable in the rearing of the wind, in the cloudy sky, and in other meteorological changes, the centre of the disturbance appears to have passed out to sea without coming sufficiently near to Bombay to cause the wind to blow with violence, and the signals were lowered on the following morning.

Strong abnormal winds from S.S.E., of about 30 miles per hour, have been felt at Bombay on several occasions since the storm warning system was established without any indications of rough weather having been observable in the barometric data furnished by the regular daily reports. The most remarkable of these disturbances occurred on the 22nd and 23rd October 1880, the 7th and 8th, and the 29th and 30th of May 1881, and the 6th November 1881. On each of these occasions the abnormal wind blow for the whole of the day with an average velocity of more than 20 miles per hour. These instances and the cyclone of May 1879 make it seem probable that cyclones impinging against the Western Ghats are much flattened and intensified on the side nearest the hills, and if this be so, it is easy to see that the barometric gradient between Bombay and Poona may undergo a sudden change of value and perhaps of sign at the line of the Gháts in which case the difference between the sea level values of the barometric pressure at Bombay and Poona will afford no measure of the magnitude of the gradient between Bombay and the foot of the Ghats. Mr. Chambers proposes to meet this difficultv by arranging for barometric observations being taken at stations near the foot of the Gháts, at Karjat and Vasind, for instance. The observations would have to be made with extreme accuracy on account of the shortness of the direct distance between Bombav and these stations. Special cautionary or assuring telegrams were sent to the port officers of Bombay and Karachi on the

12th May 1881, the 3rd, 6th and 13th of July, and the 8th, 12th, 13th, 14th and 16th November.

Zanzibár Observatory, The Observatory at Zanzibár has been raise from the voluntary to the permanent scale, and a paid observer who commenced his duties on the 1st January, 1882 has now been provided for it. From April to December 1881 the observatious were taken very accurately and regularly by Dr. Robb, and the department is much indebted to him for the interest he has taken in the work and for the devotion with which he has personally maintained the continuity of the meteorological record at that important station.

Five observers have gone through a course of instruction at the office and have obtained certificates of competency to perform meteorological work.

Instruction.

Several other new observers have been taught at the observatories by their predecessors, but there is usually in such cases marked difference for the worse in the capability of the new as compared with that of the old observer, and Mr. Chambers considers that each observer should undergo a preliminary course of instruction in Bombay whenever practicable.

The work of the office has been almost entirely confined to the

Work of the Office.

Rainfall and

Barometric

Pressure,

regular routine work of correcting and reducing the meteorological observations recorded at 22 observatories, to the verification of instruments and the training of observers, to the working of the Bombay Storm Warning Service and to the carrying on of the correspondence which these duties entail. A sketch of the meteorology of the Bombay Presidency in the previous year was prepared for incorporation in the General Administration Report of the Bombay Government. In this sketch Mr. Chambers showed how the barometric observations recorded at Zanzibár confirmed the conclusions previously arrived at, to the effect that barometric waves of long period travel slowly from west to east and that at Bombay there is a very decided relation between the daily abnormal height of the barometer and the daily rainfall, a high barometer corresponding to a light rainfall, a low one to a heavy It is obvious from this relation that if the daily barometric movements could be foreseen, it would be possible to forecast the corresponding variations of the daily rainfall. Hitherto the only means of judging on any day of the probable character of the barometric movement on the following day has been to note the particular phase of the wave-like movement going on at the time and from that to infer what would follow, but it has been observed that during the monsoon these oscillatory movements of short period are not always simultaneous at all stations but are often slightly earlier in phase on the Coromandel Coast and in Ceylon than along the West Coast of India, and this fact affords another means of judging from the telegraphic weather reports of the character of the coming barometric changes on the West Coast, and consequently of the coming rainfall.

Storms in Arabian Sea. A list of the storms of the Arabian Sea in past years has been prepared, giving the dates of their occurrence, the localities affected and other details. The distribution of the storms throughout the different months of the year from January to December is as

PRODUCTION AND DISTRI-BUTION.

follows: 4, 3, 2, 9, 13, 20, 2, 2, 3, 4, 10, 2, showing that storms are more frequent from April to June and in November than at other times of the year. The frequency of storms in different years has a decided relation to the sun-spot cycle of about eleven years, being most frequent when the spots are most numerous and least so when the spots are at a minimum, as will be seen from the following numbers showing the distribution of the storms in the sun-spot cycle :---

			YEAR.				Number of Storms	Wolf's Sun- spot Numbers
1860, &c.			•••	•••	•••		8	72

THE OBSERVATORY, COLÁBA.

By the addition of a little zinc piping a change has been made in the ventilating arrangements of the magnetograph room by which the observer is enabled at pleasure to direct the course of a current of fresh air through the box which encloses the papers that are receiving the photographic impressions. When the underground room is filled with a warm damp atmosphere, as in the months before the commencement of the monsoon, the sensitiveness of the photographic papers undergoes a serious deterioration during the exposure, and the formed images tend to fade away, so that the earlier portions of the traces are feeble whilst the later portions on the same sheet of paper are stronger: it was to mitigate these harmful influences that the special ventilation of the apparatus box was resorted to.

The autographic instruments, which are maintained in conti- Instruments. nuous action, are the following:-

Atmospheric Impressions.

I.—Declination Magnetograph.

II.—Horizontal Force Magnetograph.

III.—Vertical Force Magnetograph.

IV.—Barograph.
V.—Thermograph—dry and wet bulb.

VI.—Pluviograph.

VII.—Anemograph—direction and velocity.

Of these the first six register photographically, and the last mechanically; they are all in good order, and have worked well during the year. The principal causes of the occasional failures were the smoking of glass chimnies and deterioration of lampflames. The device for preventing crows from alighting upon the funnel of the pluviograph was attached before the commencement of the present monsoon, and it seems to be effective.

With a view to co-operation with the International Polar Expeditions of 1882-83, the horizontal force and vertical force magnetographs have been re-adjusted so as the bring their sensitiveness near to that which has been proposed for general adoption by the Polar Commission.

The Electrical clock is in good order, but the Harbour clock needs cleaning and refitting, having stopped on several occasions during the year. The time-ball was released correctly on every week-day but one in the year, and on each occasion by the action of the galvanic current between the two clocks: on the excepted day the releasing machinery was out of order, and the signal had to be made by dropping a flag instead of the ball.

52 chronometers were received from Government and 103 from captains and others for rating. A custom had grown up in the Customs Department of requiring all the tedious forms of clearing a chronometer to be gone through before it could be allowed to be brought ashore, and ship masters complained that the trouble thus put upon them was so great as to be prohibitive of their availing themselves of the facilities afforded to them at the Observatory for the rating of their chronometers. The matter being represented to the Collector of Customs, that officer removed all restrictions that could reasonably be complained of, and already a large appreciation of the concessions made is evidenced by the fact that a considerable increase has taken place in the number of chronometers brought to the Observatory, the number deposited during the past year having been more than a third greater than in the preceding year.

Papers presented to the Royal Society. The following papers have, during the year, been presented to the Royal Society, viz.:—

By the Superintendent of the Observatory.

Sun-spots and terrestrial phenomena, I. On the variations of the daily range of atmospheric temperature as recorded at the Colába Observatory, Bombay.

Sun-spots and terrestrial phenomena, II. On the variations of the daily range of magnetic declination as recorded at the Colába Observatory, Bombay.

By Mr. Vinayek Narayen None, First Assistant.

On a method of tracing periodicities in a series of observations when the periods are unknown.

The two first are applications to materials collected at this Observatory of the method adopted by Dr. Balfour Stewart in the discussion of several other series of observations, the results of which have appeared in the Proceedings of the Royal Society. The last is a description of a method, discovered by the writer, of effecting the object stated in the title, and contains a demonstration of the mathematical consequences of applying the method, together with some practical applications of the method, and account of the previously unknown periodicities that these applications have disclosed.

WEATHER AT BOMBAY. Rainfall.

There was in the past, as in the preceding, year no violent outbreak of the morsoon at Bombay. It would seem that whenever there is a premature partial discharge of the state of instability of the atmosphere, the growth of which is a general phenomenon of the few weeks preceding the commencement of the monsoon, the after-growth of that instability is never carried far enough to manifest itself in a normal "burst of the monsoon". Such a partial and premature discharge may be said to have occurred in the year 1881 between the 28th and 31st May, one of the principal characteristics of an Elephanta storm—a strong wind from the south-east quadrant-having had somewhat full development and strong persistency, and another characteristic exhibiting itself in a fall of rain which reached an aggregate of 0.35 inches. The wind of this period, at one time reaching a velocity of 36 miles per hour, was indeed the only approach to a storm-wind of any continuance and severity that occurred in the whole year; but even this seemed—like the ordinary Elephanta to be the border of a storm, the seat of which lay in the Ghats to south-eastward, rather than the storm itself, heavy clouds with occasional flittings of lightning filling the sky in that direction. After this an interval of quiet seasonal weather was followed by another but milder wind-storm, lasting from the 6th to the 8th June, and introducing the first heavy rains of the season; but the wind blew on this occasion from north-north-west, the opposite direction to that of the ordinary Elephanta storms.

The number of alternations between periods of excessive and periods of defective rainfall were in this year considerably greater than usual, and consequently the periods were generally of shorter duration and the rainfall more uniformly distributed over the rainy season. These periods are shown in the following statemont :-

Psriod.	Number of Days	Rainfall in Period	Excess ahove Average.	Defect below Average	Average Excess or Defect per Day	Abnormal additional capacity.
May 80 to June 8 June 9 to 11 12 to 22 23 to 27 28 to 30 July 1 to 6 7 and 8 9 to 12 13 to August 1 August 2 to 4 5 to September 11 September 12 and 13 14 to 26 27 28 to October 1 October 2 and 3	10 3 11 5 5 6 2 2 2 3 3 38 8 2 13 11 1	Inches. 1 24 7 63 0 53 5 41 0 83 16 48 0 06 9 19 8 76 13 26 6 23 1 48 0 70 0 88 0 32 8 53 0 07	1 nches 4 98 1 69 1 2-27 6 27 11 70 0 74 0 71 3 56	Inches. 1 69 9 64 0 65 0 84 13 04 8 45 3 20 0 46	Inches 0 17 +1 60 -0 88 +0 34 -0 22 +2 04 -0 42 +1 57 -0 65 +3 90 -0 92 +0 37 -0 25 +0 71 -0 11 +1 78	Inches. + 008 - 182 + 058 - 043 + 019 - 110 + 012 - 051 + 030 - 106 + 102 - 106 - 109 - 025 - 084 - 088

The 4th October may be regarded as the last day of the monsoon. Of days yielding falls of rain between 1 and 2 inches, 2 and 3 inches, 3 and 4 inches, and 4 and 5 inches there were respectively 8, 7, 2 and 1 in the year; and on one day (the 3rd

August) the quantity registered was still greater, viz., 11:30 inches. Besides the monsoon rains there were slight falls of '04, ·01, ·03, ·02 and ·04 inch on the 25th March, 25th May, and 10th, 15th and 78th November respectively. The total fall of the year was 73.04 inches, or 2.74 inches above the average.

The usual correspondence is shown, by the figures in the last column, between the dryness or additional capacity of the air and deficiency of actual rainfall.

Temperature.

The warm period which began on the 29th February 1881 was continued, with only slight interruptions besides those which were attributable to the rainfall of the immediate locality, throughout the year 1881, and accordingly this year had an even higher mean temperature (80°.2) than the preceding year (79°.6). But, due allowance being made for a general excess of 1° above the average temperature, the alternations of relatively warm and cold periods were not less numerous than in an average year: this will be seen from the subjoined table, which exhibits the principal oscillations of the year, including all excursions of more than 2° above or below the normal temperature of the season, and shows the duration of each warm or cold period and its average excess or defect of temperature. The days intervening between these periods were, in respect of temperature, of a normal character:-

Period	Excess (+) or Defect (-).	Period	Excess (+) or Defect ().
January 1 to 12 , 13 to 27 , 28 to February 2 February 3 to 9 , 10 to 24 , 25 to March 3 March 4 to 8 , 9 to 14 , 20 to 22 , 27 to April 5 April 6 to 9 , 10 to May 5 May 6 to 28 June 2 to 5 , 8 to 11 , 15 to 22 , 7 and 8 , 7 and 8 , 14 to 17	-21°	July 18 to 21 " 22 to August 1 August 3 " 5 and 6 " 20 to 22 " 25 to 31 September 2 to 4 " 12 and 13 " 14 to 25 " 27 October 22 to 31 November 1 to 3 " 9 to 13 " 14 to 17 " 19 and 20 " 23 to 28 December 5 to 11 " 15 and 16 " 17 to 19 " 30 and 31	-3150 +1150 +1150 +1150 +1150 +1150 +1150 +1150 -1150

The six cold periods intervening between the 8th June and 3rd October were all due to local rainfall, leaving only those of November 19 and 20 and 23 to 28 and December 5 to 11 as being local effects of conditions extending over a wider area.

Winds.

As already stated, no severe and lasting storms occurred in the year 1881, the winds of May 6 to 8, May 28 to 31 and June 6 to 8 having approached most nearly to a stormvelocity; and even for short intervals of an hour or two, the highest movements recorded were 79 miles for the two hours between 6 and 8 a.m. of the 11th July and 39 miles between 10 and 11 a.m. of the 12th July, the direction on both occasions being the usual one (W.S.W. or W.) of that part of the monsoon season: in no other single hour in the year did the velocity exceed 36 miles. On the whole there were 29 days in the year when the velocity of the daily abnormal wind exceeded 10 miles per hour, 6 more when it exceeded 15 miles, and 3 more exceeding 20 and under 25 miles; the winds of the remaining 327 days were all within 10 miles an hour of the normal winds of the respective seasons.

Tables showing the average monthly and annual values of the several meteorological elements, and the greatest and least values in the year, will be found in the Appendix.

Crops.

In Gujarát the rains fell early and very heavily and in consequence the kharif or autumn crop was delayed in sowing and its outturn was very indifferent. The rabi or winter crop, on the other hand, was almost a full crop, although the wheat suffered in Ahmedabad. In the Konkan the rain was very favourable and the crops were good. The districts were visited by locusts, but the damage which they did was not appreciable, as they appeared when the crops were off the ground, and in Ratnágiri the season was very prosperous. In the Deccan the failure of the kharif and its deficient outturn were due, not to the heavy rain as in Gujarát, but to the long-delayed rain and the scanty fall; but the seasonable later rain made ample amends for the deficiency of the early rain, and the outturn of the rabi or winter crop was as nearly as possible a full crop. In Khandesh and Nasik there was some anxiety at one time, but on the whole the season was not unfavourable. Locusts did considerable damage in the former district, and it is estimated that the destruction they caused was onc-sixteenth of the total produce. In Kanara the rain was good below the Ghats but bad above it, but in Ratnagiri it was well distributed and the season has been very prosperous. In Dharwar alone was the season extremely unsatisfactory, although it is said that the wheat crop was good. For some time there was considerable anxiety; but, although the rice failed, there was no alarm. Locusts appeared, but after the crops were off the ground, and did no damage. The greater part of Ahmednagar shared in the general prosperity, but in the northern talukas the early crops had so withered from the long-delayed rain that they had to be plucked up, and the winter crops also failed in great measure. Special measures to increase the water-supply of wells were undertaken by Government, and a special allotment was made for loans to the people for the improvement of their private wells and for the purchase of cattle, but it was not availed of to any great extent.

The rainfall in Sind is more or less unimportant, but the annual rise of the river and the length of time it continues at a fair height to fill the canals are the subjects to which most attention is directed. The rainfall, however, was not unseasonable

for desert crops and fields beyond the reach of irrigation. river rose gradually and remained at a high level without causing disastrous floods and the result has been a most exceptional season and a plentiful harvest, except perhaps in Hyderabad, where the heavy September rain damaged the standing crops. In Thar and Parkar, although the season was so unusually favourable, fever prostrated numbers of the inhabitants, and the labourers who usually come in for the harvest either did not come at all or could not be induced to stay.

Prices.

Chap. IV.

PRODUCTION AND DISTRI-BUTION,

The succession of good harvests with which the country has been blessed, has caused a continued fall in the price of produce. The damage caused to the kharif by unseasonable rain was reflected in a general rise in the market prices during the rains of 1881, but the seasonable later rain and the exceptional productiveness of the rabi harvest had a marked effect upon prices, and they fell to a lower level than has been reached for many years. In Kaládgi jowári could be bought at 42 sers for the rupee and wheat at 26 sers, and in Sholapur jowari could be purchased at 38 sers for the same money. In Ratnágiri the price of harik, which is a local product, fell about 16 per cent., the price of rice declined by 20 per cent., and the commoner grains such as nachni by 24 to 40 per cent., and, in short, the general level of prices was such as has not been known since 1862. Salt, too, was somewhat cheaper since the reduction of duty. The cheapness of the rabi crops re-acted upon the kharif and checked the rise of prices, and in some cases even caused a decline. In Sind the price of jowari fell heavily, and it could be bought in Shikarpur at 27 sers for a rupee and in Karáchi at 20 sers. Bájri was sold at 23 sers for a rupee and wheat at 13 sers. The cessation of the war demand has, it is said, also affected prices.

Wages.

Wages are not liable to change much in a country where almost all the unskilled labour and a part also of the skilled labour is paid by grain. It is only in the large towns and on public works that cash payments are in use, and the wage-receiving class has benefited greatly by the fall in the price of grain. Except in Thána, where it is said the wages of skilled labour have fallen by four annas per diem, no decline is noted in the money payments; but in Kaládgi the demand for labour caused by the new railways and the works in Bijápur and by a local demand for digging tanks has caused a small increase in cash payments. The new railway also affected the rate of wages in Dhárwár towards the close of the year, whilst in Ahmednagar they declined slightly owing to the stoppage of railway works.

Horticulture.

BOTANICAL GARDENS, GANESH KHIND.

The general condition of the garden is improving, and the number of visitors is increasing.

It can hardly be expected that the garden should be self-supporting, at least for some time, but the results of the year show the income to have been Rs. 6,370 and the expenditure Rs. 10,464. The income is derived chiefly from the sale of fruit trees, vegetable and flower seeds, taraxicum and some timber, and it appears that there has been a fair demand for certain kinds of flowers and vegetables.

Some of the more important experiments may be noticed,henbane and taraxicum have been grown, and it is proposed to extend the experiment as the demand for these products is increasing.

A field which formerly was water-logged has been drained by the dalbergia trees planted five years ago.

Notwithstanding every care the mangosteen plant succumbed to Mangosteens. the low temperature during some of the nights in November, but it is believed this is due to the injuries received by the plants on the voyage from Singápur, and a further experiment will be made. The kokum plants are in good condition, and may be expected to thrive.

The potatoes received from the Secretary of State for India have grown surprisingly well, considering the untoward season at which it was necessary to plant them.

The carob tree began to fruit three years ago, and year after year has produced a few pods that have not grown to the size of imported pods or ripened thoroughly, but in May 1882 this tree was bearing fully 30 lbs. weight of pods, the greater part of which were equal in size to the imported pods. An attempt was made to propagate this tree by layering, but the layers after six months' attention do not show signs of rooting.

447 mangoes have been grafted with choice sorts at a cost of 7 annas 2 pies each, but mangoes when larger numbers are grown the cost might be less, and it may be possible to sell them at low rates, as the object is both useful and desirable. Directions have also been given to introduce some of the best varieties of oranges from Nágpur.

The herbarium building has been altered and repaired, and Herbarium. numerous specimens have been added. A science journal in America has noticed the establishment of this institution, and-

Income.

Henbane, Taraxicum.

Potatoes.

Carob.

Mangoes.

PRODUCTION AND, DISTRI-BUTION,

there have been six applications for exchanges from botanists at American colleges and other institutions. 50 specimens which have not been identified have been submitted to Dr. King of the Calcutta Herbarium, instead of being sent to Kew.

Casuarina.

A plantation of half an acre of the casuarina tree was made in 1874 on a very poor calcareous soil near Government House, with irrigation available; in 1876 one-half the trees were transplanted to other sites, and during the last year it was found necessary to cut down every alternate tree. This thinning gave 60 poles which weighed 8,215 lbs., or at the rate of 14 tons 13 cwts. per acre, and worth as firewood Rs. 205 nearly. The timber is worth much more for carts and other agricultural implements, being very easy to work when fresh, but extremely hard and strong when seasoned.

This tree will not pay for irrigation, but is valuable for draining water-logged soil, as it exhales an extraordinary quantity of water from its leaves: during early morning the water may sometimes be seen trickling down its stem, and by this means may improve the sanitary condition of particular localities. It is propagated only from seed: the tree bears transplanting well-during the cold season, and will grow on very poor soil, provided water is found near the surface.

Bulrush Paper. Since irrigation was introduced in this district, one of the bulrushes, typha elephantina—Marátha, 'Pankunesh'—has become very common, and it is believed that it might be cultivated as paper material. Paper has been made without particular difficulty by a paper-maker at Poona from bulrush stems supplied to him from the gardens, but he cannot take up the work for his own purposes, because he finds it does not pay to make it direct from the raw material without machinery, which he cannot afford to buy. If bulrush can be produced at Rs. 15 a ton it is believed will be profitable to cultivate.

Lectures.

Mr. Woodrow lectured on vegetable physiology and systematic botany, and gave 11 garden demonstrations in systematic and economic botany. The average attendance was 12 students. He has called special attention to the large quantity of water-cress that has sprungup in the streams that run through the city of Poona since the irrigation canal was opened, and which does not appear to be generally utilised by the people.

Cryptostegia grandiflora.

The properties of the milky sap of the cryptostegia grandiflora, a beautiful climber, have been investigated for many years, and Government ordered experiments to be made in collecting the sap, especially noting the cost.

The average yield of the plants was found to be 20 grains, and at this rate the yield per acre would be 12 lbs. As the plants appeared to suffer much from tapping, and after the first week the sap stopped running, it is possible that the plants would not bear tapping more than twice yearly: this would give 24 lbs. per acre of caoutchouc yearly.

The cest of collecting was Re. 1 per lb.; this might be reduced greatly, by improved methods of collecting, to perhaps annas

8 per lb., and the value of this India rubber may be estimated at Re. 1 a lb.

As the plants growery slowly when young, the sap collecting could not be begun before the third year. Making up the account for the first five years the income would be Rs. 72; but the cost of collection, cultivation and rent would be Rs. 86 at a low estimate.

It would therefore appear that from a vigorous plant of cryptostegia grandiflora enough sap to make a few grains of India rubber can be collected in a few minutes, but afterwards the sap runs too slowly, and from the estimate of cost and of outturn, which has been made, it is not probable that it can be grown profitably; but as a similar experiment is being made at Karáchi, its result will be awaited before a decision is announced.

The cork tree received from Kew in 1871 flowered in March 1882, and two olive trees brought from Marseilles in 1873 flowered in Novomber 1581, and produced fruit which grew to the size of a filbert.

Cork Tree. Olives.

Pterospermum accrifolium, a very handsome tree occurring from the Himalaya to Chitagong, began to flower in November 1881, and was continuously in blossom till March 1882, during that time producing many hundred of large, white, very fragrant flowers.

Pterospermun acerifolium,

Many plants of agave vivapara, planted as vivaparous buds in 1872, have flowered.

Agave vivapara

The superintendent's attention was drawn to the need of experiments to show how exhausted sugar-cane land could be restored to fertility.

Sugar-cane.

He remarks:—"It is well known that the exhaustion of soil for any particular crop is owing to the removal of the ingredients required by that crop which were present in least quantity in the soil.

"The ingredients which sugar-cane requires that are present in the soil in very small quantity are silica in combination with potash, soda and lime in the soluble form called soluble silicates. To reproduce these soluble silicates is not difficult; but in this country it will be expensive, and it is not practicable in a short time.

"The process necessary is to majoure with 2 tons per acre quicklime and 10 loads per acre woodlashes, sow and plough in a green crop, such as "Tag" (chrot-blaria juncea) or "Mohria" (sinapis nigra).

"During four years manure as visual and cultivate such crops as the soil and markets suit, giving the preference, if practicable, to the pulses and avoiding the cereals,—in any case, only one corn crop can be permitted: after this, treat in the usual manner for sugar-cane, and an average grop may be expected.

"Sugar-cane soil in this district is usually rich in lime, and in some cases lime is present in jexcess; it is obvious that in many instances it will be profitable to erect a kiln and burn the calcareous earth on or near the field where it is wanted."

BOMBAY ADMINISTRATION REPORT.

PRODUCTION AND DISTRI-BUTION.

Chap. IV.

Victoria Gardens.

These are the principal gardens in Bombay, but owing to their distance and inconvenient situation they are not much resorted to; and hence, although they require to be antirely re-arranged to do justice to the hany beautiful trees and rare plants which they contain, there is a natural hesitation to incur any large outlay for this purpose. Many rare plants were, however, added to the stock, and the experiment of obtaining seeds from Germany instead of from England has been satisfactory; for not only was a much larger quantity of seed supplied for the same money, but nearly the whole of the seed germinated and produced the most luxuriant and variegated blooms. Many animals were presented to the gardens, and several died. Three monkeys, it is supposed, and several fine birds were killed by eating some poisonous stuff administered to them by a visitor.

Northbrook Garden.

The Northbrook Garden had to be thinned out, as it had become overgrown with wood, and the result has been an improvement. The turf, flowers and shrubs improved in condition. The Falkland Road Garden has also become too dense and requires clearing out, and the Sir Cowasji Jihangir Garden still remains without gates and railings. In the Elphinstone Circle, shapeless trees and underwood have given place to grass lawns, mounds and flower beds, the improvements being made at a cost of Rs. 2,592.

The maintenance of these gardens for the year cost as follows:—

Victoria Gardens Rs. 17,544 minus Rs. 9,763 receipts from sales of plants and flowers, not Rs. 7,781. Northbrook Garden Rs. 691. Falkland Road Garden Rs. 268. Sir Cowasji Jihangir Garden Rs. 302. On the Elphinstone Circle Garden Rs. 758 were spent, besides the special sum incurred for improvements.

Forests.

At the close of the year there were 14,421 square miles of Protected and forest in this Presidency, excluding Sind, under the care of the Forest Department, of which 9,202 square miles were reserved and 5,219 protected. 223½ square miles were added to the reserved forests during the year and 1971 excluded, and again 134 square miles were put under protection and 1401 thrown The disforested land in Thana was chiefly salt marsh, while 8 square miles of crown lands in Ratnágiri and nearly 174 square miles of khoti land were put under forest. Great changes were made in Khándesh in consequence of the reports of the settlement officers, which, although they affect the general result not very greatly, affected the different talukas considerably. For instance, 29 square miles were disferested in Dhulia, but nearly 20 square miles were added to the reserve; and, again, in Erandol 16 square miles were disforested, but 16 were also added to the reserve; and so in Junnar 7 square miles were disforested and 7 added to the resorve. In Sátára 1,283 acres were given over for kumri cultivation. In Sholapur demarcation and settlement work has been pushed forward with vigour, and the area under the care of the department has risen from 170 to 233 square miles, while 42 square miles have been examined and settled, as few claims are brought forward, and the inquiry is almost formal. Seven square miles have been added in the Panch Mahals, and considerable progress has been made in the Bhor State; but the Conservator draws attention to the fact that a large part of the catchment area of Lake Fife is still exposed, and heavy rain would carry large quantities of silt into the lake. Forest reserves have been selected and mapped in 58 villages in the I'dar State with proper provision for grazing and for firewood for the people, to the great satisfaction of the Political Agent and of the young Maharaja, who is said to take a lively interest in the work. In Belgaum and Dhárwár 115 square miles classed as protected were brought under the stricter rules of the reserved forest. The cost of demarcation surveys and compensation is stated to be Rs. 12,778.

A considerable number of covenanted civilians have been employed as forest settlement and demarcation officers in several Demarcation. districts in the work of demarcating forests and inquiring into rights and claims which the people may prefer in regard to land already forest or which it is proposed to include in forest. They also propose changes in the forests, such as making certain areas strictly reserved, and putting others only under protection. and obtain by exchange or purchase lands required and over which private rights have been established.

Reserved Forests.

Forest

Free grants.

Free grants of wood were made in the Northern Division to the value of Rs. 3,514, and in the Southern Division considerable quantities were given to people in poor circumstances.

Depôts.

Timber is cut departmentally and stacked at certain depôts, where it is sold by auction at stated intervals. Firewood and small wood is also cut, and sold departmentally; and any cartman in the Southern Division is able at most times of the year, except the rains, to take his cart into a part of the forest where cutting is going on, and fill it with good fuel for from 14 annas to Rs. 1-4-0. The convenience of this system is getting better known, and its cheapness is appreciated. Dead wood and bamboos are removed on payment of fees.

Grazing

The system of grazing on permit upon payment of an annual fee of 2 annual per head of horned cattle and 0 pies for goats and sheep was made general in the Southern Division during the year, excepting in Kaládgi. The receipts are very satisfactory, and the people are said to prefer the new system, except in the below Ghát districts, where grazing had not been farmed or fees levied previously. The receipts were Rs. 51,380 against Rs. 10,858, the average of the previous three years. Under the farming system 4 annual to Rs. 1-S-0 per head of cattle used to be taken, and, as the departmental rates are much cheaper, the new system is preferred.

The gawais or milkmen are said to give some trouble, although a good many have returned to Mysore and Kolhápur whence they came during the famme. They are reputed to fire the forests to improve the grass, and to cut down valuable saplings for their herds.

Kumı.

The Ghát populations (hill tribes) continue to work the lands allotted to them for kumri cultivation, but in the Khánápur Gháts the areas first cleared and sown in 1875 have not recovered sufficiently to be fit for cultivation again in 1883, and other arrangements will have to be made, as the rotation has proved to be too short.

Protection.

2,170 offences against forest laws were tried in the year, and in 1,545 cases convictions were obtained. Orders had been given that cases should not be prosecuted except with the sanction and approval of the district forest officer, and it is believed that cases are now got up with more care, and extremely petty cases are not proceeded with. The fines imposed amounted to Rs. 10,455 and confiscations to Rs. 1,403. The offences were thefts 1,278, mischief 672, and other offences 220.

Offences.

Rs. 15,282 were paid to Khots who are under agreement to protect the forests of certain villages, and Rs. 10,500 was the value realised by the sale of drift and waif wood recovered by the Forest Department.

Fires.

Khots.

It is reported that 1,255 square miles of forest were burned in the Northern Division alone. The preparation with ash manure of lands for cultivation is a fruitful cause of fire, although broad belts of land, sometimes as much as 300 feet, are cleared to prevent fires spreading into the forests. Fires were common in Kánara, Belgaum and Dhárwár; Khándesh forests suffered greatly; and it is said that fires were made to drive away locusts. large flights of which appeared in the district. In Mandvi the dread of wild beasts is so great that for sts are said to be burnt purposely to drive them off. In Kolabathe villagers turned out readily, and in Poona, Satara and Nasik also the villagers showed some activity in putting out fires, while a denser undergrowth in the reserves serves to arrest the progress of the flames. Conservator writes that it is extremely satisfactory to note that the people have recognised the evil of forest fires, and the Collectors also have noticed with satisfaction the evidence of this feeling.

Most satisfactory reports continue to be received of the condi- Plantations. tion of existing plantations. The Kadva in Kanara is said to contain-

520,000 teak, 6 to 55 feet high. 4,655 hirda, 1 to 3 feet high. 478 pithecolobium, 20 to 30 high. 250 casuarina, 4 to 20 high. 35 mahogany, 7 to 8 high. 5,640 divi-divi, 2 to 4 high.

The pithecolobium is growing remarkably well, although it does not appear to thrive above the Ghats. Almost all the suitable sites have been planted with teak, and attention is now directed to other varieties, chiefly divi-divi, which is of great commercial value, and which has been extensively planted out this year. The plants are reported to be doing splendidly. A little blackwood has been put down, and large bamboo clumps have been planted in Dhárwár. The mahogany tree does not answer in Kanara: it is attacked by a grub which feeds upon the terminal bud, and causes the tree to throw out lateral branches. The carob, too, is a failure. Hirda and coffee have been planted in Belgaum with encouraging results, but a mistake was made in clearing away all the other vegetation and dopriving the young plants of shade. Broadcast sowing has been practised in Kaladgi with great good, andf resh seedlings are observed during every inspection. This practice was adopted in Kaladgi owing to its success in the Northern Division. Mr. Shuttleworth, the Conservator of that Division, writes that it may be confidently affirmed that broadcast sowing combined with strict protection is the best system of plantations for this country, where very extensive areas have to be treated and funds are limited. In the Deccan a great change is coming over the face of the country as hill-slopes and other lands are becoming re-wooded. Not the least remarkable feature is the change in the quality and value of grass. The Bamburde Reserve near Poona a few years ago was a bare hill-slope with wretched grass, and similar slopes are assessed by the survey at 4 annas an acre. It is now covered with young trees and scrub, and the revenue from grass cut and removed is Rs. 4 an acre. But it is not to be expected that trees will grow in a season, or that timber can be produced in a year, and visibly gratifying results are not obtainable in so short a period as ten years in the Deccan. The babul plantation on the Vaitarna in Thana is valuable and flourishing, and kaju has been sown very largely in Kolába and

Ratnágiri. Pithecolobium appears to do well in Násik: of 250 plants put out all, with two or three exceptions, have thriven. In Poona several blocks of forest are sufficiently advanced to admit of their being opened out to grazing after having been closed for years. Bamboos have been planted on Mahábaleshvar with success, and the Collector remarks on the increase of brushwood on the hills; while in Sholápur scrub is coming up everywhere, and gives cover to game which has greatly increased. The reproduction of teak by coppice shoots from improvement fellings in the Panch Maháls promises to stock the forests with an excellent crop of young teak in place of old and gnarled trees.

After fifteen years' trial it seems clearly established that eucalyptus will not thrive in the Northorn Division; it is a tree of the temperate zone, and, although it exists in gardens and plantations, it is not vigorous and does not thrive. It might prove of great use if it could be got to grow round the fever-stricken barracks of Ghorpuri and Neemuch, but in place of it Mr. Shuttleworth recommends the mango and the jambul. The latter belongs to the same natural order as the eucalyptus, with aromatic leaves dotted with resinous glands, and would be highly ornamental. experiments to acclimatise several species of acacia have failed, and only 20 remain in Násik which have grown to 10 feet, while in Sholapur only 200 remain out of 1,435. The carob also has failed; but the pithecolobium has done better both in the north and south, and promises to succeed. Another unfortunate failure is the cinchona; although it has had a fair trial, it does not succeed even at Mahábaleshvar.

The expenditure on plantations has been in the Northern Division Rs. 7,068 and in the Southern Rs. 8,673—total Rs. 15,741.

Communications. On roads and bridges for forest purposes, Rs. 20,525 have been spent, chiefly in putting the road to Hulyál from Yellápur and Supa into good order and in making a bridge on the same road.

Yield.

In the Northern Division the forest produce sales realised Rs. 4,07,565, and in the Southern Division Rs. 1,04,156. In Kánara more sandalwood and myrabolans were collected; the crop of the latter has been the finest known for many years, and has measured 11,869 khandis of 784 lbs. each. The large and increasing export of bamboos from the Belgaum forests is worthy of note. In 1880-81 the number exported was 222,824 more than in the previous year, and during the year under report it was larger by 403,796 than in 1880-81. It is used amongst other purposes for fencing sugar-cane crops and for platforms for granaries. The railway works in progress have caused a large demand for wood from the forests in Kaladgi, and these can now supply very large quantities of fuel, owing to the improvement in their condition which has resulted from the conservancy of nine years. In the Northern Division there was a good demand for timber, and the rates obtained were high; sales of firewood, bamboos and minor produce all show better results.

Kánara Saw Mills. The mills cut up 1,609 logs and 2,992 pieces of teak, blackwood and junglewood. Adding to the value of the timber supplied to the mill the cost of establishment, contingencies and wastage for

spoilt wood, the whole expense was Rs. 43,257. The wood sold for Rs. 36,674, and there is Rs. 6,682 worth of stock in hand of this year's manufacture, together Rs. 43,356, which shows a profit of Rs. 99. The profit will probably show an increase how that a demand for sawn timber has arisen consequent upon the construction of the railway to Goa and the building of the Hubli and Gokák Spinning and Weaving Mills. The demand, in fact, was so great towards the close of the year that people paid their money in advance and waited at the mill for their wood, some offering enhanced rates to be served first. The wastage of wood is still very high at 30 per cent., and there is room for improvement in this respect; but if a demand were to spring up for small wood for railings, railway keys, window and door pieces, &c., the waste would be much reduced. The value of the total stock in hand is estimated at Rs. 75,869.

2001 10,000		Revenue	Expenditure
		Rs.	Rs.
Northern Division	•••	7.99,498	5,07,600
Southern Division	•••	6,15,640	3,76,381
		14 15 199	8,83,981
		14,15,138	0,00,801

Financial Results.

Surplus

...Rs. 5,31,157

The gross receipts are highest in Kánara, Rs. 4,10,000; Thána, Rs. 2,25,000; Khándesh, 1,34,000; Belgaum, Rs. 1,27,000; in all other districts the amount is below one lákh.

SIND FORESTS.

292 acres were permanently added to the forests during the year. The whole of the forests, except 46,000 acres, was open to the public for grazing cattle, while firewood and building material were obtainable from waste lands adjoining to villages.

39 forest offences were tried: in 33 cases convictions were obtained, and Rs. 296 in fines were imposed.

Forest fires have not been so numerous, and the area burnt is very much smaller.

Considerable tracts have been notified as required for forest purposes, and the settlement officer has been inquiring into private claims, but the work has not progressed very fast.

The eucalyptus is said to be doing well at Kahuja, but teak and divi-divi are reported to have entirely failed, and pithecolobium to be in a sickly condition. Bábul is making rapid growth in the forests of the Jerruck Circle.

Surplus ... 1,27,330

It has been decided to burn wood in the southern section of the Indus Valley State Railway, and a heavy demand was made on the department for 1,800,000 cubic feet of timber, which was satisfactorily complied with. The area proposed to be taken up for forest is within easy distance of the railway, and will facilitate the supply of fuel to the company.

Mines and Quarries.

There is nothing to report under this head.

Manufactures.

The two great manufactures carried on in this Presidency are cotton goods and salt; the latter is to a large extent manufactured departmentally and will be noticed in a separate section. Indigo is made to some extent at Khairpur in Sind.

The chief seat of the manufacture of cotton goods is the town of Bombay itself, where 25 mills were working during the year, containing 9,262 looms and 812,096 spindles, which probably consumed 120,000 handis (of 784 lbs. each) of cotton. In the districts there are 17 mills, of which 11 are situated in Gujarát. In all about 40,000 persons find employment in these factories.

The opening of the Rájputána-Málwa Railway has created an outlet for the mill products of Ahmedabad, which find a sale in the north-east of India even so far as Cawnpore, and a mill in Ahmedabad which had been closed for some time was re-opened with success. A new mill is being built at Broach, steps have been taken in view to the erection of a mill at Gokák in the Belgaum Collectorate, and another is projected to be worked by water-power supplemented by steam when the water fails.

There are two silk spinning and weaving companies in Bombay which find the best market for their manufactures in Barma, and one jute mill which makes twine and gunny. Cotton gins and presses are to be found in Bombay and in several of the cotton-growing districts.

The weaving of coarse cotton cloth, saris and pagris is practised in almost every considerable town in this Presidency on the native system, and many towns have a considerable reputation for the excellence of their saris and pagris. The silk dhotars and pitambars of Yeola are in great request, the kinkhab of Ahmedabad is well known, and silk cloths which are usually worn by high-caste Hindus at dinner are manufactured in many places besides Ahmedabad, Poona and Sholapur. The manufacture of corrope is an industry which thrives in the Konkan and Kanara, and coarse kamblis or blankets are made in Khandesh, Nasik, Sholapur and Ratnagiri. Toys in ivory and clay are made in Surat and Poona, and the artistic pottery and carpets of Sind and the Cutch work in silver enjoy a wide reputation. The woodcarving of Ahmedabad and Surat is a familiar object, and the American agency established in the former city for the making

and export of artistic work to America has proved a success, and has been enlarged. Brass and copper pots are made in many towns, notably in Bombay and Nasik; while common pottery, glass bangles and lac bangles are made almost everywhere. Paper is made at Junnar, Násik and Ahmedabad.

Under the Factories Act it has been enacted that no child The Factories under seven years of age shall be employed in any factory, and that no child between 7 and 12 years of ago shall be employed more than 9 hours in any one day, or without an interval of one hour for food and rest. Four days in each month are to be allowed as holidays, and children are not to be allowed to do dangerous work. Provision is also made for fencing machinery in motion.

The appointment of a special Inspector to carry out the purposes of the Act has been sanctioned, and in order to start the working of the Act by an experienced officer application was made to the Secretary of State for the temporary services of an Inspector from England.

The Act applies to 64 factories in Bombay and 35 factories in the Mofussil, the term being restricted to places where more than 100 persons are employed, and includes, besides cotton and ginning factories, the mint, dockyards, railway workshops, iron foundries and printing presses.

The Inspector reports that he only saw one or two children under 8 years of age working in factories, and infers that children under that age are not wanted and are very rarely engaged. There has been great difficulty on the part of factory managers in carrying out the law restricting the employment of children to 9 hours with an interval of rest. When the Act came into force children seem to have been employed in large numbers in all the mills, but notice was then given by five mill-owners that they would discontinue the employment of children under 12 years. After 6 months' operation of the Act it was reported that the employment of children had been discontinued in 16 mills, and in June 1882 this number had increased to 20. The total number of children employed in the mills in Bombay City was 465. In some mills they work from 7 a.m. to 5 p.m., with one hour for rest in the middle of the day, and in other mills different periods are fixed for different sets of children. The children are in the habit of eating their food at odd times and in any places in the mills, and relieve one another at their tasks. The Inspector was therefore not able to satisfy himself that the stated intervals for food and rest were observed.

Notices fixing the four holidays in each month were regularly posted up, and the days selected have almost always been Sundays; but the registers of children employed were not properly kept or written up, and the certificates of age were not generally forthcoming when wanted for inspection.

In 13 factories serious deficiencies in fencing were observed, which were remedied, but generally the machinery was well fenced. 40 accidents were reported.

The Inspector visited the mills at Ahmedabad and found them to be in a bad state of repair and badly ventilated, while some of the engines and fly-wheels were unfenced, but the managers apparently understooú the Act and were desirous to act in accordance with its provisions. The mill at Nadiád in Kaira was not in a satisfactory condition, and some of the children were working during the intervals allowed for rest. From the two mills at Broach all children under 12 were discharged when the Factories Act was brought into operation, but 2 or 3 were found working full time who were clearly under age. In Surat children under 12 are employed though not in large numbers, and it is believed that they work strictly within the limits allowed by the Act.

The Inspector suggests several amendments to the Act to give power to compel the observance of sanitary provisions and ventilation, and to restrict the hours of working of women and young persons from 6 A.M. to 6 r.M., and to give them one day's rest in every seven days. He also proposes that children under 8 years of age should not be employed, and that the certificate should also state that they are physically fit for employment in factories, and that the hours of work should be reduced to 6 hours either in the morning or in the afternoon. Further, he recomends that the Act should be extended to small factories where the risks of employing children and working over-time on very indifferent and ill-guarded machines are probably greater than in the larger and richer factories.

Steam Boiler Inspection Act. The total number of boilers examined under the Steam Boiler Inspection Act in the City of Bombay was 208 as compared with 211 in the preceding year and 230 in the year 1879-80. Of the 208 boilers, 19 were new ones which required no strengthening, 9 were repaired and rendered serviceable, and 10 were condemned as unfit for further use. 4 old boilers, 1 new one and 5 new large steel boilers had their pressure reduced.

174 engines were examined, or 2 less than in 1880-81. No new engine was set up, nor was any old one condemned. No appeal was made against the Inspector's decisions, but a difference of opinion arose as to the requisite strength of a crank shaft of an engine which was referred to the President of the Boiler Commission, and the Inspector's view was adopted.

There was only one accident, a breakdown of the fly-wheel of a mill, which was happily unattended with any loss of life.

Out of the 62 candidates who presented themselves for examination to obtain certificates under the Act, 4 passed as first class engineers, 3 as second class engineers, and 26 as third class engineers, while 7 individuals were granted certificates under Section XIX of the Act, and 4 were granted service certificates.

The fees realised from the inspection of boilers and the examination of engineers amounted to Rs. 5,992, while the expenditure was Rs. 10,144-14-9. There was thus a deficit of Rs. 4,152, which was to a large extent covered by the fees received for the extra official advice given to steam users by the Inspector. The total fees so realised amounted to Rs. 8,157, out of which Rs. 4,558 were paid to the Inspector.

Trade.

FOREIGN TRADE.

PORT OF BOMBAY.

The value of merchandise and treasure imported and exported from the port of Bombay may be seen from the following table:—

	Merchandise.	Treasure	Total.	
	Rs.	Rs.	Rs.	
Imports Exports	18,13,72,652 31,67,67,778	9,01,51,055 56,97,613	. 27,15,23,707 32,24,65,391	

Compared with 1880-81 the imports of merchandise have decreased by over 113 lákhs, but in comparison with the average of five years they show an increase of 340 lákhs. In exports the value has increased by 508 lákhs over 1880-81 and by 915 lákhs over the average of five years. The imports of treasure were 230 lákhs more than in 1880-81 and 104 lákhs more than the average of five years. The exports, on the other hand, were 31 lákhs less than in the previous year and 148 lákhs less than the average of the preceding five years.

The import trade increased principally with the United Kingdom, China and Australia, but in all these cases the cause of increase appears to have been larger imports of gold and silver, although there was also a large increase in machinery imported from the United Kingdom, while the imports of cotton and woollen goods, metals and coal have seriously declined.

The import trade declined principally with Italy, Austria and Arabia in the articles of silver and with Mauritius in refined sugar and coffee.

The export trade has increased with all the more important countries of Europe and with Egypt and the Mauritius. With the United Kingdom it increased by 258 lákhs, of which 164 lákhs was due to cotton and 124 lákhs to grains and pulse, while it declined by nearly 21 lákhs in wool, and there was also a large decline in coffee, spices and shawls. The exports to France increased by 149 lakhs chiefly in wheat, coffee and seeds, which were also largely exported to Belgium, the trade with which country has increased by 106 lákhs. The trade to Germany increased by 37 lákhs chiefly in cotton and wheat, and to Italy and Holland in the same articles. The increase of nearly 21 lákhs in the trade to Egypt is chiefly in wheat, cotton and linseed, and to the Mauritius there were large exports of silver.

The export trade decreased principally with China and Aden, Spain and Russia, Zanzibár, Mozambique and Ceylon. The decline was most marked in the exports of opjum to China and of silver to Aden. With Spain and Russia file decline was in cotton—with Zanzibár, Mozambique and Ceylon chiefly in silver.

The bulk of the trade in both imports and exports was done with the United Kingdom and represents 46.58 per cent. of the whole. In imports it was 65 per cent. and it has remained about this point for four years; in exports it was 31 per cent. and it has nearly recovered the fall from 1878-79. The trade with the other countries of Europe taken together was 21.41 per cent. of the whole and appears to be rapidly progressive, especially within the last three years. Nearly half of it, 9.05 per cent., was done with France and about a quarter with Italy, 4.81 per cent. The trade with Africa was 4:31 per cent. of the whole and appears to be somewhat stationary. The most of it is done with Mauritius. With Western Asia the trade was 7.51 per cent. of the whole and does not appear to improve; it is chiefly done with Persia and Arabia. With Eastern Asia the trade was 17.85 per cent., almost altogether confined to China, 16 48 per cent. The trade with this country was very prosperous from 1877 to 1879, but since 1880 it has been weak and has declined very seriously. With America and Australia the trade is comparatively insignificant.

In imports there has been a decrease in almost every important article of trade, but in exports the trade is improving. On the contrary the imports of gold and silver are rising, while exports of the same are falling. The decrease in imports is mostly due to lessor imports of sugar, raw silk, cotton piece goods, coal, railway materials and iron, and partly to silk manufactures, tea, coffee, oils and papers. The only item of imports which exhibits a large increase is machinery and mill work.

In exports the articles which have increased are grain and pulse, principally wheat, of which the exports were unprecedented, raw cotton and seeds. Hides and skins and cotton twist have also increased. The exports of opium and wool, however, have fallen off.

Imports.

Yarn.

The principal items of increase under imports may be noticed more in detail, disregarding those in which the increase is less than In apparel the increase, Rs. 1,19,373, is attributed to the importation of a superior quality of gold thread from Russia. In cotton twist and yarn the increase, Rs. 3,47,565, is chiefly under Turkey red which is now made of a cheaper dye, and the decrease in the price caused a ready sale to up-country weavers. The local mills have abandoned the market in mule 30s, to the home imports and confined themselves to the manufacture of 20s., which they sold as fast as they made them. Mule 50s. and 60s. were largely used by the Bombay Dyeing Company, by whom they were sold, after being dyed, at rates much cheaper than imported dyed yarns. Water No. 20 are used along with mule 20 of local manufacture by up-country weavers, who thus turn out a better description of cloth. Cheap freights induced larger imports of the inferior kinds of earthenware and porcelain

for which there is a large demand by the native community. The imports of fireworks increased by Rs. 1,15,207. The increasing use of cheap lamps, chimneys and oil tumblers caused an increase of Rs. 4,04,900 in glass. The unprecedented importations of hardware in the previous year were continued and even surpassed in this year by Rs. 1,38,362; sewing machines, soda-water machines and ice machines being included under this head. The successful establishment of telephones and the use of the electric light are reflected in the trade returns in an increase under instruments and apparatus. The demand for ivory is reviving and the increase was Rs. 1,50,322 chiefly in tusks from Zanzibar and Mozambique. Boots and shoes and saddlery and harness, chiefly from the United Kingdom, constitute an increase of Rs. 2,06,463. Nearly 30 lakhs worth of liquor was imported, being more by Rs. 1,87,653 than in 1880-81. The imports of beer from Austria are noticeably increasing. Superior brandy is being displaced by whisky which is beginning to be imported from Victoria. Inferior brandy is imported in bulk, and after being bottled and dressed with a flaring label is passed as superior English brandy. It is much in use among the lower classes of natives. Champagne, claret, port and sherry have increased, but hocks have decreased. imports of matches still continue to increase. In provisions the increase was about Rs. 61 lákhs, to which dates alone contributed nearly 3 lakhs. Cotton and alpacca umbrellas continue to be imported in increasing quantities, and the common oiled umbrellas from China are supplanting the paper kethsáls which were formerly in use.

Uuder treasure there has been an increase of over 104 lakks in gold and of over 126 lákhs in silver.

The items of imports in which a decline is most conspicuous will be noticed. Coal shows a decrease of about 26 lakks in value due to large stocks remaining on hand and to the great fall in price. Cotton piece-goods taken altogether decreased by 28 lákhs. There was a decrease of nearly 45 lakhs in the dutiable makes against an increase of 514 lákhs in the free makes, the net increase being over 62 lákhs. In dutiable goods there was a falling off in nearly every item except domestics and drills, the largest decrease occurring in mulls and jaconets. Printers. shirtings, madapollams, T. cloths, all decreased. In free makes the increase occurred in jaconets but not to any great extent, and in shirtings, T. cloths and "all other sorts". The decrease in jaconets, printers, mulls and madapollams is attributable partly to the accumulations of the previous year's imports, which were very heavy, and partly to the preference shown by consumers for country made goods. The increase in shirtings is due to demands from some up-country markets which hitherto had made no demands in this market, but which were induced to do so by the opening of the Rajputana State Railway. Exclusive of grey goods the net decrease was nearly 35 lakhs, of which "Coloured, Printed, or Dyed" constituted nearly 32% lakhs and handkerchiefs a little over 7 lakhs. In white piece-goods the increase was nearly 5 lakhs, chiefly in shirtings, mulls and jaconets, the increase being attributed to the extension of the rail-

Hardware.

Liquors.

Treasure.

way system. The decrease in coloured and printed handkerchiefs is due to a glut of these articles in the market.

Metals.

Oils.

Silk.

The imports of cochineal and saffrons declined very largely in consequence of low prices. In copper the decline was 61 lákhs, although the Rájputána Railway has opened the road for Australian copper to Delhi. It is said that copper is now carried direct to the Persian Gulf and is not transhipped at Bombay. A new description of hooping, known as "Steely Hoop", is superseding the old iron hoop, and the trade in sheet iron being overstocked there was a large decrease of 12½ lákhs in iron, although the import of bar iron increased. The decrease in spelter is attributed to the melting down of the zinc lining to the packing cases in Bombay and selling the article as spelter. In oils there was a decrease of 6½ lákhs chiefly in kerosine oil with which the market had been overstocked. In paper the same reason is assigned for the decrease of 4 lákhs, chiefly in writing paper from Austria. Railway plant and rolling stock also declined by 144 lákhs. The demand for raw silk in the China markets was greater, and the rise in price checked imports to Bombay. Persian silk has hitherto come round vià Odessa to Bombay, but the route is now changing to Amritsar The total decrease in silk was 29½ lákhs. market for silk piece-goods was overstocked and hence a decline of over 8 lákhs. The demand for sugar was exceptional in the previous year owing to a deficient crop in Bengal, and has now fallen back by 291 lakhs. Tea has also fallen to its normal level; it is re-exported to Persia and to Kabul vid Karachi. Prices were not high enough to admit of large importations of woollen piece-goods.

Turning to exports the following are the most important articles in which an increase is exhibited over the returns of 1880-81.

Cotton,

Exports.

The quantity of cotton exported was 44,33,043 cwts. valued at Rs. 11,88,21,738, which is an increase of nearly 2101 lakhs; over 1631 lakhs of this increase being sent to the United Kingdom, and the exports to Germany, Belgium, China and Italy also have greatly increased. The export to France, Spain and Russia declined. The figures for ten years show that the trade is almost exactly of the same dimensions as it was ten years ago. In 1872-73 the quantity of cotton exported was 20,85,000 cwts.; in 1881-82 it was 20,91,000 cwts., but the difference in the value is remarkable. In 1872 it was valued at 7283 lakhs, in 1881 it was valued at only 555 lakhs. In the interval the trade had increased to over three million cwts. in 1874-75 and then rapidly declined to less than one million in 1878-79. Since then an improvement has set in, which has been marked within the last two years. It is said that the American cotton of 1881-82 was not of good quality and that the Indian trade has been very remunerative. Over 29,711,000 lbs. of cotton twist and yarn were exported chiefly to China, Japán and other Asiatic ports. Indigo was chiefly sent to the United Kingdom and Persia and the trade to Italy is rapidly developing. Over 12,442,000 cwts. of grain and pulse was exported, which is more by 7,696,000 than the quantity in

Wheat.

The value is stated to be 550 lakhs. The largest increase was in wheat; the value of the exports amounting to 513 lákhs against 167½ lákhs, the increase being 345½ lákhs. Low freights and moderate railway charges enabled the cultivators to export the produce of their abundant harvests, and, later on, the failure of the harvest in England and Europe allowed the trade to be continued with profit. The rice trade was abandoned for the wheat which was found to be more profitable.

The increase in hides and skins was 10 lakhs, principally to the United Kingdom where good prices were obtained. In groundnuts the increase was 74 lakhs chiefly in exports to France and Belgium. In linseed there was an increase of 123th lakhs chiefly to the United Kingdom, Belgium and Italy. The exports of poppy seed largely increased to France and Belgium. trade in rape seed has recovered, the total exports being over 46 lákhs, and of gingelly 643 lákhs were exported chiefly to France and Italy.

Seeds.

The total export of coffee has not declined, but the quantity sent to France has increased tenfold, while to the United Kingdom it has declined by one-third. In grey piece-goods the Piece-goods. decline occurs chiefly in shirtings, longcloths and madapollams, which are comparatively of the finer makes. T. cloths, jeans, domestics, sheetings and drills slightly increased. The people of Mozambique, Zanzibár and Adon, who are the chief consumers, are said to prefer the coarser cloths on account of their being cheaper and more durable.

In the important item of opium there has been a further decrease of 2,817 chests valued at Rs. 94½ lákhs. It has to face the competition of China grown opium, the production of which has largely increased and is said to be equal to the whole of the Indian production. Its price is considerably cheaper and will probably fall lower. The imports of Persian opium into China have also been gradually increasing since 1876 from 1,600 chests to 7,800 chests, and that opium has greatly improved in quality. Although the fee on Málwa opium has been reduced by Rs. 50 per chest, the trade instead of increasing has declined still further. The export of cardamums, pepper, ginger and betelnut declined, and also tobacco, which is chiefly sent to Aden in an unmanufactured state. In wool there was a large decline of 20½ lákhs chiefly in exports to the United Kingdom, where the market was overstocked. The export of shawls to the United Kingdom declined, but increased to France.

Opium.

Spices,

Customs.

Foreign

Shipping.

The import duties amounted to Rs. 59,27,146, or Rs. 9,37,405 less than in 1880-81, due to the decrease in imports and to the remission of duty on certain kinds of grey goods. The abolition of the major portion of the import duties from the 10th March 1882 also affected the income to an estimated amount of 3½ lákhs. The export duties levied amounted to Rs. 1,97,039 less by Rs. 72,756 than in the previous year.

In all 2,109 vessels with a tonnage of 18,38,510 tons entered and cleared with cargoes to foreign external ports. The corresponding numbers in the previous year were 1,910 vessels and 15,62,513

tons; 1,167 were steamers and 942 sailing ships. Besides the above, 181 vessels came and left in ballast. Next to British ships, which were of course the most numerous, there were 55 Austrian vessels, 24 Italian and 19 American. The Arab craft were 370 and the native craft 378. Of the whole number 931 steamers came and went through the canal against 615 in 1880-81.

COASTING TRADE.

PORT OF BOMBAY.

The figures for the coasting trade are given below:-

	Merchandisc.	Treasure	Total.
	Rs.	Rø.	Rs.
Imports Exports	9,72,93,538 6,31,35,115	17,12,939 73,30,725	9,90,06,477 7,04,65,840

The total trade improved by about 74 lákhs. The imports almost altogether consist of Indian merchandise, in which there was a large increase in raw cotton, gunny bags, raw wool, pepper, betelnut, wheat, refined sugar, salt and myrobólans. In rice, jowári, bájri, cocoanuts and ghee there was a large decrease. The exports of Indian produce amounted to about 263 lákhs and of foreign merchandise to 369 lákhs, and in both items the trade has declined.

The greatest increase in the import trade was made with Káthiáwár, Bengal, Sind, and Cutch and Goa; while the imports from British Burma, Madras and Cambay declined very largely. From Káthiáwár heavy imports of cotton were received and also some cotton twist and yarn and grain. From Bengal large imports were received of jute, gunny bags and cloths, indigo, cotton piece-goods, raw silk and refined sugar. From Sind, raw wool, indigo, raw cotton, jowári and bájri and gunny bags. From Cutch came cotton and wheat, and silver from Goa. The decrease of imports from British Burma occurred chiefly in rice and teak. From Madras less cotton, cocoanuts, rice and ghee were received, and from Cambay less tobacco and wheat.

The export coasting trade increased principally with Cutch and Goa, to both of which ports larger exports of silver were made. Unrefined sugar, opium and cotton coloured piece-goods also were sent in large quantities to Cutch, and cotton and woollen piece-goods to Goa. The exports to Sind declined by nearly 30 lákhs, generally under all heads. Nme lákhs less of silver were sent to Madras as well as 5 lákhs less of foreign merchandise. To Bongal 4 lákhs less of Indian merchandise was sent and about 6½ lákhs less of foreign merchandise. The completion of the Bhávnagar Railway has caused a decline of 16 lákhs in the value of railway materials exported to Káthiáwár, but greater exports of rice, jowári and bájri, betelnut, opium, gunny bags, and machinery have brought down this sum to a net decrease of about 5½ lákhs. Foreign cotton goods and silver are the chief items which show a marked falling off in the exports to Travancore.

> Coasting Shipping

The number of vessels engaged in the coasting trade which entered and cleared with cargoes from Bombay Harbour increased to 57,734 with a toppage of 15,96,806 tons. Besides these, 29,770 vessels entered or cleared in ballast.

The entire trade of the port of Bombay will be seen from the following table:-

Port of Bombay entire Trade.

Imports.		Rs.	Rs.

Subordinate Ports.

The trade of the continental ports of the Bombay Presidency declined by over 38 lakhs. The total trade was reduced to Rs. 7,30,52,566, or by about 5 per cent. In 1880-81 the trade had increased by 42 per cent.

There was a small increase of Rs. 30,530 in foreign imports, almost entirely due to wet and dry dates from Bussora landed at Kumta in Kánara. The trade in Bussora dates has rapidly developed in the last two years and has injured the trade in Arabian dates. Foreign exports have declined by Rs. 41,883. To the United Kingdom cotton and linseed were not sent direct from Kárwár as they had been in 1880-81, and the exports of grain to Arabia from Gujarát fell off in consequence of the bad harvest. Some Bulsár merchants exported paddy, rice and ghee to Madagascar as an experiment.

The number of ships which entered and cleared from subordinate ports with cargoes fell to 62 with a tonnage of 3,572. 4 other vessels entered and cleared in ballast.

In the coasting trade there was a decrease of nearly 8 lákhs in the imports from British ports in the Bombay Presidency, which were reduced to 212 lakhs. Into Ratnagiri and Thana much less grain was imported, but into the Gujarát ports much

more. Into Thána and Ratnágiri less salt was imported. Taking the whole Presidency the chief items of increase were cotton twist, country piece-goods, foreign piece-goods, gunny bags and teak, while the following show a decrease:—salt, raw cotton, cocoanuts, grain, coal and foreign raw silk. The imports of grain, salt and cocoanuts from Madras fell off; on the other hand cocoanut oil, which had of late been displaced to a great extent by kerosine, shows a large increase. The imports from Diu declined in salted and dry fish, from Cutch less grain was imported but more Porbandar stone, from Cambay less tobacco was taken.

The export coasting trade decreased by Rs. 18 lákhs to British ports in the Bombay Presidency to Rs 4,06,50,346. In most ports there has been a small improvement, but in Surat the exports declined by 17½ lákhs and in Ratnágiri by over 15½ lákhs, chiefly in cotton and in a less degree in paddy and other grains, unrefined sugar and agricultural produce generally. In all the ports the falling off in cotton alone amounted to about 25½ lákhs, and there was also a decrease in salt, seeds and sugar. There was an increase in lime, myrobolans, grain, country spirit and spices. To Sind less grain, seeds and ghee was exported, to Madras less rice from Kánara, to Travancore less salt and to Káthiáwár less treasure.

The number of vessels which entered and cleared coastwise with cargoes from subordinate ports was 107,094 with a tonnage of 1,825,129, besides 73,749 vessels which came or left in ballast.

The following table shows the entire trade of the subordinate ports:—

'Imports.	Rs.	Rs.
Merchandise Treasure	2,29,95,226 17,43,937	-5,16,163 +1,39,939
Government Stores ., Treasure	2,43,524 7,34,993	+ 2,499 + 4,41,87 4
Total	2,57,17,680	+68,149

Grand Total	7,60,58,089	-18,02,608

The customs revenue derived from the trade at the subordinate ports amounted to Rs. 26,818, which is less by Rs. 3,724 than the amount collected in 1880-81.

SIND.

FOREIGN TRADE.

The value of the foreign trade of the port of Karáchi was nearly 327½ lákhs and over 105 lákhs more than in the previous year.

	Merchandise.	Treasure.	Total.
	Rs.	Rs.	Rs.
Imports Exports	1,22,74,679 1,99,07,288	49,625 5,18,305	1,23,24,304 2,04,25,593

About 103½ lákhs of the import trade was done with the United Kingdom, of which 22¾ lákhs was in cotton goods and chiefly in those containing yarn not higher than 30s, which were exempted from duty. The opening of the railway to the Punjab has also attracted the cotton traffic. The importation of machinery for the Merewether Pier and some water-works has increased the value under that head. From Persia very large imports of wheat and dates were received. The imports from Italy declined very largely in liquors.

The exports to the United Kingdom amounted to nearly 97 lakhs, and an increase is chiefly observable in wheat of 27½ lakhs, in cotton of 7½ lakhs, and in date, coffee and raw wool. To France over 30½ lakhs of wheat was exported and to Austria the increase of exports was in cotton by 1½ lakh. The exports to Italy fell off in rape seed and gingelly, and to Porsia heavy exports of indigo were made. With Arabia the trade in grain has declined, owing to a good season in that country.

In cotton twist and yarn there has been an increase of 140,561 lbs. in imports, which nearly all came from the United Kingdom and a little from Austria and Italy. The imports of cotton piece-goods increased by about 100,000 yards and by 12½ lákhs in value, which is said to be due to the greater prosperity of the people and to the abolition of duty on goods made of yarn of the lower counts. The value of free cotton goods imported was Rs. 17,36,551, more by 11½ lákhs than in 1880-81. There was also a small increase in wool and woollen goods.

The market was overstocked with liquors imported during the war and before the troops were withdrawn, and hence a decline of nearly 54,000 gallons in the imports of that article. In metals there was a large increase under steel and also under copper and zinc, but the imports of iron fell off by over 1½ lákh. There was a falling off under dates and provisions and also under railway materials, less being required by the Sind Railway.

The exports of cotton increased by 27,165 cwts. in quantity and over 5 lakhs in value; there was a large decrease to China, but the greater quantities sent forward to the United Kingdom and Austria more than covered the deficiency. The total export in 1879-80 was 112,000 cwts., in 1880-81 104,000 cwts., in 1881-82 131,000 cwts., the export to the United Kingdom alone in the last

Chap. IV.
PRODUCTION
AND DISTRIBUTION.

year being 87,629 cwts. The indigo manufactured in Sind and the Punjab was chiefly exported to Persia, the increase in the value exported being 2½ lákhs. The wheat-trade has rapidly expanded from 274,000 cwts. in 1879-80, 169,000 cwts. in 1880-81 to 1,852,000 cwts. in 1881-82, the value of that exported being put down at nearly 95 lákhs. The rice trade has grown in quantity but the value had fallen. Gingelly seed was largely exported to France and Belgium, while the export to Italy has seriously declined. The export of tea sprang from 206,000 lbs. to 307,000 lbs.; the whole of it was sent to the United Kingdom, except a very small quantity which found its way to Australia. Under Indian wool there is an increase of 450,000 lbs.; under foreign wool the export doubled to 4,058,000 lbs. valued at 19 lákhs.

643 vessels with cargoes entered and cleared from the port of Karáchi besides 86 vessels in ballast, many of them seeking freights of cotton and wheat. 117 vessels came and went through the canal.

The customs revenue collected at Karáchi was Rs. 5,41,214, less by Rs. 88,666 than in the previous year.

KARA'CHI COASTING TRADE.

The value of the imports into Karáchi by the coasting trade was 198\(^3\) lákhs, three-fourths of which consisted of foreign merchandise from Bombay. The imports of foreign cotton goods decreased by about half a lákh, which appear to have been supplanted by the same value of Indian goods. Cotton twist decreased by over 300,000 lbs., probably due to direct imports from foreign countries. The exports amounted to 97\(^1\) lákhs, over 8 lákhs of which was the value of Indian produce and was 31 lákhs more than the value of the trade in 1880-81. This is due to larger shipments of cotton and wool. The imports of gold on private account declined by Rs. 28,690, but the imports of silver increased by Rs. 1,39,000. 2,365 laden vessels were engaged in the trade.

Subordinate Ports in Sind.

There are two little ports, one at Keti and the other at Sirgandar, at which a small trade is carried on. Their foreign trade is insignificant. The coasting trade amounted to nearly 2½ lákhs in imports and 8½ lákhs in exports. At Keti trade declined, but at Sirgandar it increased. The customs revenue collected was Rs. 28,466.

Public Works.

The entire expenditure of the year was Rs. 67,06,909. In round figures the expenditure on new works was Rs. 26½ lákhs; on repairs 26 lákhs; on establishment 12¾ lákhs; on tools and plant ⅓ lákh, and on the Barrack Department 1½ lákhs. Divided between the different services the charges were—

MILITARY.

The outlay for military works was Rs. 12,26,319, of which about 4½ lákhs was for original works and 4½ lákhs for repairs, the balance being absorbed by establishment and the Barrack Department. The work of enlarging the military prison at Poona was completed, as well as the canteen in the Wanowri Lines, where a new quarter-guard and cells for a regiment of European Infantry were erected.

Work was commenced on a hospital for British troops at Ahmedabad, which is estimated to cost about 13 lakhs, and will provide accommodation for 38 patients besides subsidiary buildings and quarters for the apothecaries and other attendants.

The old Royal Artillery barracks at Kolhápur were improved and some permanent buildings were constructed for a detachment of 100 men of British Infantry at that station. At Jacobabad new pendalls were being built for a Native Infantry regiment, and at Aden the recreation room and theatre for European troops have been completed. Lines for the Sappers and Miners at the same place were in progress and the male and female wards of the European Infantry hospital were rebuilt.

Work has been commenced at a fortified position at Ahmedabad on a powder magazine to contain 100,000 lbs. of powder, a ball ammunition room, workshop and guard-room, which will cost 3½ lákhs. It was at first doubted if the roof of the magazine would be bomb-proof, but it has been decided to be safe with the addition of earth over the vaulted roof if thought necessary.

PRODUCTION AND DISTRIBUTION,

CIVIL BUILDINGS.

The expenditure on civil buildings was Rs. 15,06,679: Rs. 7,14,000 being for original works and Rs. 4,37,000 for repairs.

All the works in connection with the Salt Department mentioned in last year's report were completed, and the construction of a custom house at Málvan was commenced during the year. Quarters for the superintendent, offices and quarters for the salt establishment at Moach were built at Karáchi, and a scheme for supplying drinking water to the establishment employed on the works was completed. A tramway and water-supply works in connection with the extension of the Khárághoda salt-works to Uru are in progress. The mámlatdárs' kacheris at Chopda in the Khándesh Collectorate and at Devrukh in the Ratnágiri Collectorate were completed, and a similar building at Khed has been put in hand.

The general buildings undertaken consisted of alterations to the European General Hospital, Bombay; improvements to the body-guard lines and decoration of the principal staircase room in the Government House at Parel; construction of 36 additional stalls in the General Mews at Bombay, and of a dispensary at Vajeria; erection of a dispensary with subsidiary buildings at Sangamner in Ahmednagar, and the construction of a detached pavilion and re-construction of 3 staff bungalows at Government House, Ganesh Khind, Poona. The restoration and adaptation at Bijápur of several buildings as residences and offices for the Collector, his Assistants, the Executive Engineer, &c, in connection with the establishment at that city of the head-quarter station of the Kaládgi District, were in progress. A dispensary was completed at Indi, and the conversion of the old military hospital at Dhárwár into a civil hospital was half finished.

Churches,

The church at Malabár Hill and that in the camp at Ahmedabad were completed; and the new works were the provision of quarters with out-houses for the Roman Catholic Chaplain at Purandhar, the construction of a Mission Church at Ahmednagar, and the provision of a cemetery at Poona, the former of which was completed and the two latter, were in progress.

Schools.

The quarters and out-houses for the superintendent and teacher of the institution in the compound of the School of Art, the store-room, and additions and alterations to the school itself, were completed during the year.

The building for the Alexandra Native Girls' English Institution was completed and handed over for occupation. The west wing of the Cathedral High School has been completed. The central feature is approaching completion, but the east wing has not yet been put in hand, funds not being available for the prosecution of the work. Stained glass windows were substituted for the venetianed ones in the room over the front porch of the University Library; but the Clock Tower remains incomplete pending the arrival from England of the clock and chimes. It is proposed to illuminate it by electric light at the joint expense of Government and the Bombay Municipality.

The original building for the school at Hánsot in the Anklesvar Táluka having been found insufficient, another block of the same dimensions was constructed in the rear. School-houses were built at Vejálpur, Anklav and Dákor in the Karra Collectorate. The Byramji Jeejeebhoy Medical School at Ahmedabad was completed during the year, and school-houses are being constructed at Kopargaon in the Ahmednagar and at Wani in the Násik Collectorates.

A new Subordinate Judgo's court-house at Vágra in the Broach Collectorate was completed. In the Kaira District a police station at Limbdi for 14 men and police lines at Thalla for 10 men were erected, and the bungalow of the superintendent of police was finished and occupied in 1881-82. At Poona the Faráskhána of the old Boodwar Palace, formerly used as a cookroom for the police lock-up, has been converted into a lock-up in lieu of the very confined and ill-ventilated place which answered the purpose before. Police lines were in progress in Khándesh, Belgaum, Ratnágiri and Sind.

COMMUNICATIONS.

The total outlay on communications, including roads and bridges, was Rs. 32,00,653, of which Rs. 9,53,488 was for original works and Rs. 15,92,708 for repairs; the remainder being for establishment and tools and plant.

The works executed for the improvement of communications in the Presidency extended over a large area, but the following is a concise description of the more important works carried out in each district:—

In 1865 a road connecting the town of Thana with Ghodbandar was commenced, but abandoned on the completion of the first 4 miles, and now it is being extended to the Ghodbandar creek, a distance of 2½ miles, whence access can be had by water to Ghodbandar, Bassein, &c. The Murbad-Saralgaon section of the road from Kalyan to the Malsey Ghat has been metalled, and the total length of the line now open is 27 miles; 6 miles of the road from Kalyan to Murbad, have been metalled during the year, making a total of 15 miles metalled, and leaving only 4 miles to complete the metalling of the whole road.

Nearly the whole of the earthwork and all the small and large bridges and culverts on the road from Surat to Bárdoli in British territory, which were in progress last year, have been almost completed, and the Foolpara-Ushwaneekoomar road, which is a continuation of the road from Surat to Foolpara, was in progress during the year.

A proposal having been made to construct a light railway along the road from Broach to A'mod, its metalling has been postponed pending the settlement of the question of laying down of the railway. The work of constructing a masonry dip, 260 feet long by 20 feet broad, to facilitate traffic on the Dolia Khari, a long low salt-water creek on the Jambusar and Tankária road, was nearly completed, and a paved causeway, 100 feet long and 18 feet wide,

Roads.

Chap. IV.
PRODUCTION
AND DISTRIBUTION.

with metalled slopes over the Amla Khari, has been completed on the road from Anklesvar to Hansot.

The work of improving and metalling the British and Bariya sections of the road from Godhra to Jhálod, which form portions of the line joining Jhálod with the Godhra and Dohad road, was in progress during the year. A short length of road, bridged and stone-motalled, over which heavy traffic will pass, is in progress, joining the Godhra-Dohad road with the Godhra Railway Station. A similar line, 2 miles long, has been undertaken, joining the Godhra-Bávda road with the Godhra Railway Station. The road from Páli to Bálásmor m British territory was finished, and is now in use. The construction of the road from the Barajri Station of the B. B. & C. I. Railway to Naika was in progress, and its eventual extension in the direction of Dholka is regarded as likely to add largely to its value. The road between the Nadiad Railway Station and the town, designed to avoid the passing of traffic through the narrow streets of the town, was in progress, and will be completed in 1882-83.

The road from Sánand and Sárkhej to the Sábarmati Railway Station was in progress, most of the materials used being obtained from the old Ellis Bridge. A road, about 18 miles long, to connect the town of Dhandhuka with the Ránpur Railway Station on the Bhávnagar-Gondal Railway, was commenced two mouths before the close of the year.

The Kárwár to Yellápur road was completed. The Navalgund and Annigeri road in Dhárwár was thoroughly completed, including the erection of 3 large bridges across nálás. The construction of the road from Gadag viá Dambal to Hesrur, 30 miles in length, work on which had been suspended in 1879, was resumed; and the section between Gadag and Dambal has now been completed in every respect, and railway feeders in connection with the Sirsi-Bádámi road were in progress. The Annigeri section of the Dhárwár-Haliyál road was completed. A double boat, complete, was provided, and a goods shed erected in connection with the improvements to the Tungabhadra crossing at Hesrur.

Progress was being made on the A'mbaghat, and it was expected the road would be finished in the monsoon.

The Nahavighát road has been completed, and is in good order, and the Peth-Sángli road has been considerably improved. The improvements of the Shergaon-Khind works were being continued, and the ghát has been greatly improved.

The section of the road between Rájur and Bári of the Loni-Bári road, Ahmednagur, was still in progress. The following works were also in progress: improvements to the road from Sangamner to Kalas; construction of feeder roads from (1) Shrígonda to Pimpri, (2) Belwandi village to the Nagar and Dhond road, (3) village of Wámbori to the Wámbori Railway Station, (4) Rahatta to Ekrúk to join the railway station at Chibuli or Puntamba, (5) Loni to the Belápur Railway. Station, (6) Belápur town to the Belápur Railway Station.

Bridges.

On the Násik-Dindori and Kalvan road work has been carried as far as mile 32. The greater portion of the Ubada Bári-ghát road has been put in proper order, and the whole will be opened for traffic after the thousand of 1882-83.

The road from Jalgaon to Dharangaon has been completed with bridges and drains for seven miles.

A new bridge has been constructed in lieu of the old ricketty Wanki timber bridge on the Bulsár and Tithal road, and a timber bridge of 5 spans was built over the Khadvi nála on the road from Jambusar to Tankária, and traffic now passes over it. The bridge over the Utávli River at Walla, on the Godhra and Dhandhuka road, was thrown open for traffic in August. The old bridge across the Durced creek, on the same road, having been washed away owing to deficient waterway, a new bridge of 8 spans was commenced. A bridge with masonry piers and timber superstructure was built over the Bhorkundi nála on the Dhárwar and Tenái Ghát road, and the bridge over the Várna River, in Sátára, was opened for traffic in June last. A foot bridge across the

An iron girder bridge of 3 spans was nearly completed over the Western Nára, near Bahawalpur, Karáchi, on the road from Johi to Dádu, and a similar bridge was completed over the Nurwáh on the road from Sulji Station to the ferry. An iron rolled girder bridge of one span was completed over the Nasrat, in the Kandiáro Táluka, Hyderabad, and a similar one commenced and partially completed over the Guni at Natali.

Yenna River at Medha was in progress.

MISCELLANEOUS PUBLIC IMPROVEMENTS.

Under this head the total expenditure was Rs. 7,50,062, of which Rs. 5,46,053 was for original works and Rs. 98,927 for repairs.

New markets, consisting of two buildings with asphalte flooring, were commenced in the town of Thána; and the works in connection with the project for the supply of water to the town from the Pokran spring were completed, and opened by His Excellency the Governor, water being supplied to some parts of the town in July. The work in connection with the water-supply in the old Bund Valley at Mátherán was completed during 1881-82 at a cost over the estimate, as the nature of the rock found under a portion of the retaining wall necessitated an additional average depth of 12 feet.

A project for supplying the town of Roha, in the Kolába Collectorate, with water from a perennial spring in the hills situated five miles away from the town, was sanctioned for Rs. 29,995. The water flows down the rocky bed of a small nála, and for the rest of the distance is conveyed by stoneware piping to a masonry service reservoir, whence it is conducted to the town by cast*iron piping. The work of restoring the Begam Tank, Kaládgi, was completed, with the exception of the clearance of the old aqueduct and the distribution arrangements,

Chap. IV.
PRODUCTION
AND DISTRIBUTION

and the improvements to the Tolamati Tank were nearly completed. The scheme for supplying the town of Satara with water from a reservoir at Khas was in progress during the year.

Karáchi Harbour Works. The maintenance and repairs of the Manora Breakwater have been transferred to the Karáchi Harbour Board. The work stood the south-west monsoon of 1881 without material injury, as it has now done for seven successive monsoons, during which time the cost of repairs has averaged only ½ per cent. per annum on the first cost of the breakwater. This has been mainly expended in gradually adding a concrete capping to make up for settlement, which still continues slightly on the outer half length.

The works for the protection of Manora Point executed during the two previous seasons stood the sea well, and that portion of the cliff extending from the breakwater for a distance of 226 yards along the sea face of the Point may now be looked on as effectually protected, at a cost of Rs. 96,583.

The dredging of the harbour was carried on at a cost of less than 1 lákh; 19,160 tons were dredged in rectification of the Entrance Channel and 210,496 tons within the harbour. The cost of the harbour surveys is now borne by the Karáchi Harbour Board, but the usual survey of January 1882 shows a fair continuance of improvement, though not so marked as it might have been had better dredging power been available.

RAILWAYS.

Dhond and Manmád Railway. The stations, staff-quarters and gate lodges on the Dhond and Manmad Railway were completed, and whatever work may now be required on capital account will be executed by the G. I. P. Railway Company, by whom this railway is now worked. The stores remaining on hand were sent to the Sholapur-Gadag line. The net earnings were Rs. 1,22,500, as the cost of working was considerably less, the gain to Government being 39 per cent. more than in 1880, when the line was under State management.

Berár Railways, The Berár branches were thoroughly repaired, and, notwithstanding the heavy outlay, the net earnings of the two branches to Amraoti and Khámgaon were Rs. 30,878 as compared with Rs. 11,686 in 1880.

Bársi Extension. The G. I. P. Railway agreed to construct a short line of 20 miles from Bársi Road Station to the town of Bársi along the line of road which Government undertook to sell to the company for 4 lákhs; but as the Secretary of State declined to sanction any extension of the company's guaranteed system, the scheme fell to the ground. It is hoped it may be revived in another form. A line, 33 miles long, is projected to Pandharpur from Bársi Road Station, but the company do not think that it is likely to pay, and have postponed its consideration for the present.

Pandharpur Extension.

> Southern Marátha Railways,

The Southern Marátha Railway system comprises three distinct lines: the first from Marmagao to Bellary, the second from Sholapur to Gadag, and the third from Poona to Belgaum. The portion of the Marmagao-Bellary Railway, lying in Portuguese

Chap. IV.
PRODUCTION
AND DISTRIBUTION.

territory, will be constructed and worked by an independent company; the remaining sections with the railway from Sholapur to Gadag being built as famine protective work. From Bellary to Hospett the earthwork was nearly completed and Smiles of permanent way had been laid. The line has been finally set out between Hubli and the frontier to join the Portuguese section, and it is understood the Portuguese company has made some progress although they commenced work so late as March 1882. On the Sholapur line advantage has been taken of the earthwork executed in 1879-80 as a famine relief work, and 29 miles of line have been laid from Sholapur towards Bijapur. Several buildings in connection with the line have been put up, and wells have been sunk at all stations between Hotgi and Bijapur. A contract has also been made for the supply of 100,000 Jarra sleepers from West Australia for the Southern Maratha Railways.

Sholápur-Bijápur Line.

From Poona the line has been staked out for about 26 miles and a fair line has been selected up the Nagheri Ghát. From Belgaum the line will be extended to join the Marmagao-Bellary Railway.

Rájputána-Málwa Railway.

The Rajputana-Malwa Railway includes the lines formerly called the Holkar and Scindia-Neomuch and the Neemuch-Nasirabad Railways. These were amalgamated with the Rajputana system and brought under one management in December 1881. The control was at the same time transferred from the Government of Bombay to the Government of India in order to relieve the former from the increase of work which had been caused by the dovelopment of the Southern Marátha system of railways and because the line is mainly situated in the Native States of Rájputána and Málwa, which are under the direct supervision of the Government of India. The section between Noemuch and Nasirabad was opened for traffic in December 1881, the Viceroy having previously passed over the line when he visited Chitor in November. The net profits of the year were Rs. 34,69,340, or 4.14 per cent. on capital expended.

> Bhávnagar-Gondal Railway.

Very satisfactory progress was made with the bridging on the Bhávnagar-Gondal Railway, and great part of the line, with the exception of one section, was kept open throughout the year. The bridge over the Wadhwan-Bhojawa has been begun, and will be finished in 1882-83. The total earnings were Rs. 6,88,385 and the expenses Rs. 4,83,131, showing a net profit of Rs. 2,05,254, or 2.75 per cent. on capital expended. The traffic appears to be steadily improving, and the rolling stock had to be increased. Cotton is the principal item of traffic; it is mostly brought to Bhávnagar for sale, and there pressed and shipped to Bombay. The cotton from Limbdi goes to Wadhwan and is there transferred to the B. B. & C. I. Railway.

Gáekwár's Railway,

Several bridges and culverts on the Dábhoi-Miagam sections had to be rebuilt and the profit was reduced to Rs. 48,849, which is only 3.95 per cent. as against 7.31 per cent. in 1880. It is proposed that the Darbár should join with Government in promoting a line from Surat to Bárdoli and Songad; and the line has been surveyed, but nothing has been definitely settled.

Broach to Jambusar.

It is also under consideration to make a line from Broach to Jambusar, 31 miles.

Chap. IV. 196

PRODUCTION AND DISTRI-BUTION

Nágpur and Chatisgad. Two short extensions of the Nagpur-Chatisgad Railway were opened for traffic from Terora to Gurdia, 18 miles, and from Gurdia to Ambgaon, 14 miles.

G. I. P. Railway. The new terminal station at Bori Bandar of the G. I. P. Railway was brought into use on the 1st January 1882, and it is hoped that the offices will be completed by the end of 1884. A new stores depôt is being constructed at Parel, and the present stores at Byculla will be handed over for the use of the State Railways. The merchants' waiting room and offices at the Wádi Bandar goods terminus were completed. It is proposed to build a bridge between Nesbit Lane and Hancock Bridge in order to carry the up-passenger line of the G. I. P. Railway across the two goods lines. It is also proposed to establish an additional railway school at Ahmednagar and Násik instead of Panchmari, which is at too great a distance off the line.

B. B. & C. I. Railway.

The G. I. P. Company have submitted a plan to extend the Bhopal line to Cawnpur and Gwalior, and the B. B. & C. I. R. Company have proposed to connect Godhra viâ Rutlam with Cawnpur and Gwalior. The extension to Godhra was opened in February 1882. The Narbada Viaduct, which had been destroyed by floods, was rebuilt and opened for traffic in May 1881, and the new Broach Station has been finished. The goods terminus is to be removed from Carnac Bandar to Mody Bay, and will be carried out at a cost of nearly 4 lákhs; and the line has been doubled from Andheri to Virár.

Through rates

The Government of India, who have the exclusive control of the rates to be charged on the Rájputána and East India Railways, have ruled that no change affecting through rates by either route is to be made without their sanction, and deprecate any competition for traffic between railways belonging to or guaranteed by the State. The development of traffic on the Rájputána Railway has been rapid, and as its capacities increase, it will be necessary to attract a larger traffic to maintain progress.

Acoidents

The number of miles open on the G. I. P. Railway was 1,445 and on the B. B. & C. I. Railway 445; the former carried 5,499,224 passengers and the latter 7,098,754 passengers. On the G. I. P. Railway there were 281 accidents, including 65 of fire in trains and on the B. B. & C. I. Railway 72. There were 6 passengers killed on the latter line and none on the former, 52 passengers were injured, and of the servants of the companies 63 were killed and 109 injured. On the State Railways there were 259 accidents, including 174 cases of running over cattle, chiefly on the Rajputana line; 32 persons were killed and 26 wounded.

G. I. P. Railway. Receipts and Expenditure. The gross earnings of the G. I. P. Railway were Rs. 3,57,07,387 and the expenses Rs. 1,72,62,354, leaving a net profit of Rs. 1,84,45,033, which is more by Rs. 66,74,938 than the amount earned in 1880-81, and is 6.29 per cent. interest on the capital. This sufficed to pay the guaranteed interest in full, and left a surplus of 37½ lákhs. The coaching traffic yielded 63¾ lákhs: there was a decline in the receipts from first and second class passengers owing to the passengers to the North-West now using the

Rajputana route; but the cooly class contributed no less than Rs. 31,84,000, and the third class Rs. 10,36,000. The slow-train service at the rate of 21 pies per mile has thus proved a lucrative source of revenue. The amount earned by the goods traffic was Rs. 9,52,41,000, due to the heavy traffic in wheat, which has increased from 99,000 tons in 1878 to 504,700 tons in 1881; and as the receipts of this article for the East India and Holkar and Scindia lines decreased during the year, the excess is due to the indigenous traffic of the country. The amount received for the carriage of cotton, chiefly from Berár, was Rs. 34,15,000, which shows an increase of more than 5 lákhs; for ground-nuts Rs. 2,75,000 were received, and for linseed Rs. 16,19,800. There was also an increase in teclseed and spice seeds. The salt and piece-goods traffic declined very largely, and the traffic receipts from food-grains fell to 151 lakhs, or nearly 6 lakhs less than in 1880, probably owing to the local plenty making it unnecessary to move grain from one district to another. The through traffic with the East India Railway and with the B B. & C. I. Railway has declined, but it has increased with the Holkar and Nagpur Railways.

The working expenses increased with the increased traffic and the extra cost incurred in the working of the State lines. They amount to 49.4 per cent. on the gross earnings.

The capital account of the year has been added to by the cost B, B, & C. I. of the extension from Páli to Godhra, 17 miles, of works at the Parel and Broach stations, by the Dhamanganga Bridge and Receipts and other works, besides additions to the rolling stock at a cost of 73 lákhs. A separate account of the cost of the Narbada Bridge has been kept, and will be eventually charged to revenue; it appears that the expenditure to the 31st December 1881 was Rs. 374 lákhs.

The earnings were Rs. 98,87,301 and the expenses Rs. 41,90,968, leaving a net profit of Rs. 56,96,336, more by nearly 7 lákhs than in 1880-81, and represents interest at the rate of 6.48 per cent. on the capital, which was sufficient to pay off the guaranteed interest and to leave Rs. 4,78,703 as the surplus payable to Government. These results are due to the expansion of traffic consequent on the extensive area brought into connection with this railway by the Raiputana-Malwa line.

The receipts from the coaching traffic were Rs. 33,30,040, more by 63 lakhs than the receipts in 1880, chiefly derived from the passenger traffic, which has been rapidly increasing since the opening of the short route to the North-West. The number of third class passengers in mail trains declined, but they apparently preferred the cheap slow train which was put on, and by which the charge is only 21 pies per mile, third class. The local and suburban traffic has also increased, but not at the same rate as in previous year—the total number of such passengers being 4,351,505, who paid the company Rs. 2,87,942. The receipts for the goods traffic were Rs. 59,67,289, nearly half of which were derived from cotton, grain and seeds. The traffic receipts from the last item, seeds, have increased extraordinarily, but in cotton there would have been a heavy decline owing to the

Kailway. Expend: ture.

Chap. IV. PRODUCTION AND DISTRI-BUTION.

short crop in Gujarát had it not been for receipts from the Rájputána-Málwa Railway. The rates for this article were reduced to compete with the sea-borne traffic, but as yet without effect. While the interchange of traffic with the Rajputana-Málwa Railway has increased by nearly 78,000 tons, it has declined with the G. I. P. Railway, chiefly in the article of salt, of which 5,535 tons less were carried by the B. B. & C. I. Railway itself, representing a loss of 2 lákhs.

The result of the heavier traffic was an increase in working expenses to Rs. 37,79,114, which is 38 7 per cent. on the gross earnings. The permanent way was in bad condition and had to be renewed in many parts, and the rolling stock was greatly improved. For police charges Government now make a contribution both to this and to the G. I. P. Railway Company for the maintenance of law and order as distinct from the special duty of guarding the company's property and goods traffic.

CANALS.

Indus Conservancy.

51 sunken trees and other obstructions were removed from the bed of the Indus, and as for some time past the dead trees on the banks have been carefully removed, the obstructions from this cause have been gradually decreasing. The inundation was favourable, and although only one inch higher than in 1880-81, it caused a considerable amount of damage to forest land. It appears that the river is forcing an outlet to the sea through the Hydri Channel which has been closed for twenty years, while the Hajamri Channel is silting up.

The traffic on the river declined, and it is supposed that wheat was sent by the Rajputana Railway to Bombay in preference to the river in consequence of the great facilities offered by the railway and at the Prince's Dock in loading for export; but the Indus Valley Railway traffic in wheat also increased very largely. The voyage from Ferojpur to Kotri occupies three weeks in a native boat, and the freight is 3½ annas per maund of wheat and 6 annas per maund of cotton, but there is little or no return freight procurable. In spite of the decline of traffic the number of boats rose to 3,320, which exceeds by 99 the number in the previous year. The rules for the registration of boats have been improved, and evasion of the law will now be more difficult.

The receipts from fees from vessels plying on the river and other sources amounted to Rs. 46,925, and the expenditure, including special repairs to the tug, to Rs. 4,57,202.

TELEGRAPHS.

Offices.

There were 32 offices open at the close of the year in Bombay and 7 in Sind. New offices were opened at Bársi and Bijápur and one at the Cotton Green, Bombay. A temporary office was open for nearly three months at Badáni in Sind during the floods and used by the Public Works Department for observations in connection with the Kashmor bund. The office at Junagad was transferred to the Bhávnagar and Gondal Railway. Two offices are worked by military signallers and three are worked by clerks in the Collector's or Executive Engineer's offices.

The line from Bombay to Dádar vid the G. I. P. Railway was

dismantled, and all the wires are now carried along the B. B. &

C. I. Railway. 20 miles were constructed to connect Sholápur with Bársi and 59 miles to join Sholápur and Bijápur, besides

Chap. IV.
PRODUCTION
AND DISTRIBUTION.

Wires.

Telephones.

The Secretariat was put in telephonic communication with Government House at Malabár Point and at Parel, and several private firms have had special lines laid down between their offices and the Prince's Dock and other places. The Editor of the Bombay Gazette with characteristic enterprise has a special telephone wire between his private residence and the office in the Fort. The Custom House has also been put into communication with the Prince's Dock. In Poona the Council Hall is in communication with Government House at Ganesh Khind, and at Mahábaleshvar the telegraph office was put in communication with Government House.

The failure of the Eastern Cable between Aden and Bombay and the total interruption of traffic by that route from the 12th July to the 10th August 1881 caused the full weight of the entire telegraphic correspondence with Europe to be thrown upon the Persian Gulf lule. No less than 19,000 messages were forwarded in that time. The relay at Jask made it possible to manage the transit of about 800 messages daily by one working circuit only. With translation at Jask the speed of working is nearly doubled; and it is estimated that with both lines in working order 1,500 messages can be transmitted daily.

Indo-European Telograph. Persian Gulf Section.

Revenue.

The net revenue for message transmitted over	Rs.
the Persian Gulf section during 1881-82 was	7,54,091
ture and exchange	4,744
Total	7,58,835
Deduct—Working expenses and purchase of stores, subsidies, &c., as detailed below	3,16,205
Balance in favour of Persian Gulf section	4,42,629

The expenditure includes a payment of Rs. 19,820 as a political subsidy.

The length of the cable is 1,700 kmc... and of the land line 1,367 miles. The left wire of the Charbar-Jask section was cut by natives on the 13th February last, and was the only instance of wilful damage of that nature.

Notwithstanding the numerous faults in the cables and the lengthy interruptions of sections, through communication was only failing during a period of 9 days and 10 hours, at a time when both Jask-Bushire sections had suddenly experienced a break simultaneously. This was the first instance in twelve years of a total interruption of the Gulf system.

The gross value of the traffic of the section amounted to Rs. 21,72,436 and the net earnings to Rs. 7,54,091, being an increase of Rs. 1,06,011 in the net receipts of the previous year.

Receipts.

Chap. IV.
PRODUCTION
AND DISTRIBUTION.

Messages.

79,003 messages containing 1,065,520 words were transmitted as under:—

Government or official 1,443
Commercial and private ... 77,472
Press,—to "Times", London ... 88

Total 79,003

Increase for 1881-82 ... 28,944

The traffic of the past five years shows a very satisfactory increase. The number of messages in that time has increased from 29,368 to 79,003 and the net receipts from Rs. 3,72,000 to Rs. 7,54,000.

The proportion of the traffic carried viâ Teheran was 95 per cent. and viâ Turkey 5 per cent.

Speed.

The average mean rate of transmission from England to Karáchi viá Teheran shows a decrease of 10 minutes per message compared with the previous year, but compared with the speed attained by the cable to Suez the results are better viá the Gulf; the mean speed from Calcutta viá Teheran is 2 hours 6 minutes against 4 hours 11 minutes viá Suez.

The speed of transmission $vi\hat{a}$ Turkey has considerably improved since October last, but the through working continues faulty and inaccurate, and interruptions between Busreh and Bagdad are of very frequent occurrence.

POST OFFICE.

The reforms introduced during the year were the system of prepayment of parcel postage in cash instead of by postage labels, the reduction in the registration fee from 4 annas to 2 annas, and the system of cash payment in advance at reduced rates of postage on newspapers and periodicals. The second measure has been perhaps the most important in a financial point of view, as the reduction in the fee has already caused an increase of over 100,000 in the number of registered letters. The third measure has been very largely accepted both by English and vernacular papers, as out of the 163 newspapers and periodicals that existed in this circle at the close of March 1882, 97 had availed themselves of the privilege.

Thursday and Tuesday were at first fixed as the days of departure of the Overland Mails from Bombay in the fair and rainy seasons respectively, but this arrangement did not give satisfaction to the public of Calcutta, and the question was, therefore, discussed by a committee appointed in London, and Friday and Tuesday were adopted as the days of the departure of the Overland Mails.

Want of money retarded the development of the department in 1880-81, but during the year some little progress was made. The number of post offices open at the close of March 1882 was 794 as compared with 735 in the proceeding year. 56 new offices were opened, and 3 were transferred to this circle from the Central Provinces and Berár. 74 additional letter-boxes were

made available to the public, and the number of village postmen was increased by 65. The total mileage was 13,076 at the close of the year, the increase being due to the opening of new offices which had to be connected with existing offices, and to the transfer to this circle of several lines with the 3 offices from the Central Provinces and Berár.

The statistics of the whole year show that letters, post cards, newspapers, books and pattern packets, parcels and money orders, aggregating 3,15,72,320, were given out for delivery as compared with 2,80,84,992 in the previous year, the increase being of 34,87,328 covers.

The Foreign Parcel Post is growing in popularity. A new exchange with China was established with effect from the 1st January 1882, but only two parcels were received up to the end of March. The net profit to the department from this branch, which was Rs. 20,557 in 1873, the first year of its establishment, has risen to Rs. 1,32,012-3-4 at the close of the ninth year of its existence. The number of parcels received from and despatched to foreign countries was 87,537. With a view to prevent the risk of loss of very small parcels, a minimum limit of size was fixed at 3 inches in length by 2 inches in breadth and 2 inches in depth.

A money order exchange was established with the following countries during the year:—

South Australia.
Western do.
New South Wales.
Queensland.
Straits Settlement.

Victoria. Tasmania. China. Japán and Mauritius.

The money order scheme has now taken deep root in the country, as may be judged from the increasing use of this means of remitting money.

The following two tables show separately the transactions under the head of inland and foreign money order during the last half of 1880-81 and 1881-82, the statistics for the whole of 1881-82 not being available:—

Inland.

Increase	583	28,639	539 7	28		••	
Decrease		••••	-		257 5	10 4	

The statistics of the insurance scheme for six months of the year show a falling off—a result which is no doubt due to the expansion of the money order system. The value of the letters and articles insured declined by nearly ten lakhs in six months.

The insurance fees realised were Rs. 80,768, while the total amount of compensation paid to senders of insured articles amounted to Rs. 9,315 against Rs. 30,074-6-7 in 7880-81.

The value payable parcel system is being rapidly developed. For the half year 1881-82, 13,385 parcels were carried by the Post Office which were valued at nearly 1½ lakhs. The number was 8,055 more than the number carried in the half year of 1880-81.

In 1879 an important concession allowing State correspondence to be prepaid by service postage labels was granted to Native States in this circle, and most of them availed themselves of the privilege and abolished their own daks. The Cutch State adopted the system in the year under report.

There were 5 cases of departmental loss during the year: the loss of a mail bag in one instance was due to the carelessness of a tonga driver for which the full contract penalty was enforced, and in two others the loss was due to the foundering of boats by which 4 postal servants lost their lives. The number of cases of loss due to actual neglect is thus reduced to 2. There were 6 cases of theft or house-breaking committed in post offices, but the amount stolen was very small, and only 4 instances of highway robbery of the mail as compared with 10 in the preceding year; all of them occurred in the Kánara Division.

District Post.

In 1880-81 there was little to chronicle in the way of change or progress, as financial reasons would not allow of any expansion; but, in 1881-82, 51 District Post village postmen, who were self-supporting, were converted into Imperial village postmen, and the savings thus effected in the District Post were utilised in employing other District village postmen at places at which they were required. Something of an advance was, therefore, made in supplying the needs of the rural population.

The post office at Talevádi in the South Marátha Country was closed, and there was left only one office belonging to the District Dák. The number of letter-boxes was 524 as compared with 590

in the previous year. The decrease of 66 thus shown does not represent any limitation on the facilities given to the rural public for posting letters, but is due to the fact that a number of letter-boxes formerly served by District village postmen have been transferred to the charge of Imperial village postmen. There is also a decrease in the number of village postmen, of whom there were 498 at the close of the year as compared with 504 at the close of the preceding year.

In consequence of the abolition of the post office at Talevádi, in the Belgaum District, the runners' line between that office and Khánápur became unnecessary; but a line was opened between Bágevádi and Nidgundi, a distance of 16 miles, to keep up communication with the latter place.

272,169 articles were posted for despatch, and 911,968 articles were received for delivery. Taken together this shows an increase of over 30,000 articles, but 5.49 per cent. were returned undelivered. This is partly due to the fact that a smaller staff had to deal with a larger number of articles than last year, and partly to the fact that as District Dák postmen are converted into Imperial postmen, new men have to be employed in their places. In this way no fewer than 45 new District Dák postmen were engaged, and were necessarily at a disadvantage as compared with postmen of some experience.

As was expected, there has been a large increase in the number of registered articles received for despatch and sent out for delivery. This is to be attributed to the reduction in the registration fee from 4 annas to 2 annas, and to the special powers of registering letters on the part of village postmen.

Unpaid correspondence has been steadily decreasing for some years, and the falling off in the number of paid parcels received for delivery is due to the expansion of the money order system. Small sums of money, which were formerly sent through the post in cash as parcels, are now remitted by money order.

The approximate value of the articles received for delivery by the District Post was Rs. 43,387 as compared with Rs. 44,850 in the previous year.

The cost of the establishment was Rs. 85,457.

Irrigation.

The principal works in progress during the year were the Nira Canal in Poona, the Mhasvad Tank on the borders of the Sholápur Collectorate, and the Gokák Canal in Belgaum, all of them large works sanctioned for execution from the grant for Protective Public Works which had previously been commenced during the famine of 1876-77 and which are of great importance as a means of protecting considerable areas from the effects of drought. Of other projects the Kadwa River Works were in progress as Productive Public Works; the complete Travara River scheme was submitted; and considerable repairs were effected to the old works of irrigation in Gujarát, Khándesh, Násik, Kaládgi, Belgaum and Dhárwár.

The Ashti Tank in Sholapur and Bhadalwadi Tank in Poona were opened for irrigation, making in all 26 new works in operation. The area irrigated by these 26 works was 29,749 acres, and compares with that in previous years as follows:—

						Area ir- rigated.	Average Ramfall	Remarks.
1875-76						Acres. 7,296	Inches.	
1876-77	•••	•••	•••	•••		17,059	14.65	3
1877-78	•••	•••	•••	•••		25,362	22 01	Years of famine.
1878-79	•••	***	•••	•••		17,286	32.69	
1879-80	•••	•••	•••	•••		22,412	20 91	
1880-81	•••	•••	•••	•••	• • •	34,447	18.71	
1881-82	•••	•••	•••	•••	•••	29,749	17.46	
		···						<u> </u>

The rainfall was deficient, but there was no time during which water was a nocessity. The total decrease in area on the whole of the works taken together was 4,695. On the Jámda and Mutha Canals alone the decrease was 5,291 acros, so that on the other works in the aggregate there was an increase of 596 acres.

The area irrigated was larger than in any previous year with the exception of 1880-81, and the irrigable area under command was 290,668 acres as compared with 223,933 acres in 1880-81.

In Sind the Indus rose unusually early, and maintained a high level from the middle of July to the middle of September. The season was unmarked by excessive floods, and the lands had further opportunity to recover from those of previous years. The river embankments were maintained and strengthened, and considerable progress was made with the Desort Canal and branches and the Eastern Nára Works.

Chap. IV.
PRODUCTION

BUTION,
Accounts.

The finance accounts of the year exhibit a total revenue, under the head direct receipts, of Rs. 3,54,033 as compared with Rs. 2,67,255 in the previous year. The bulk of the irrigation revenue dependent on the works is credited under land revenue, and does not, therefore, appear in the Public Works Finance Accounts.

The entire expenditure of the year was Rs. 29,69,634 including Rs. 12,616 from funds supplied by contributions, and was distributed as follows:—

					Ks.
Works and Repairs	•••	•••	•••	•••	23,33,015
Establishment	• • •	•••	•••	•••	6,24,062
Tools and Plant	•••	•••	•••	•••	18,231
Suspense Accounts	•••	•••	•••	•••	3,650
Retunds of Revenue	•••	•••	•••	•••	727
Receipts on Capital	•••	•••	•••	•••	2,751
			Total	•••	29,69,634

The cost of establishment was thus 26½ per cent. on the outlay for works and repairs, which is not excessive remembering that a large proportion of the time of the establishment is devoted to repair and maintenance and in many cases to the revenue administration of the works.

GUJARÁT AND THE DECCAN.

The Háthmati Canal, a new work brought into operation for the first time in 1873-74, is complete in all essentials. The puddling of the canal bed undertaken as an experiment to stop excessive loss of water by percolation, proved only partially successful, and a considerable volume of water still goes to waste in this way. Measures are now under consideration for utilising the loakage water.

Ahmedabad. Háthmati Canals.

The weir and head-works of the canal are situated in I'dar territory, and it was the original intention of the I'dar State to build a bridge across the Háthmati River on top of the weir, but the Darbár have now substituted a causeway across the river below the weir. This will apparently answer all purposes, as it will be impassable only during floods, and at such times the country roads are impassable or nearly so—so that traffic is suspended.

The area actually irrigated was 1,928 acros as compared with 1,534 acres in the previous year. Storage works to supplement the Háthmati River's ordinary stream are urgently required to render the supply to this canal permanent and adequate at all seasons. Surveys and investigations are in progress.

This work is designed to supply the tanks in the vicinity of the city of Ahmedabad from the surplus water of the river, and has reached an advanced stage. It provides the means of irrigation to a tract in which it will be most readily taken advantage of. The defect of the scheme is that the supply is not at present constant, and its purpose is thus restricted to supplying tanks during freshes in the river or at times when there is surplus water available; storage works constructed above the head-works of the

Khári Cut.

Chap. IV.
PRODUCTION
AND DISTRIBUTION.

Khári Cut would render the supply permanent, and irrigation direct from the channels as they now exist would be extensively practised. Surveys have been made, and projects for reservoirs on the Háthmati River (which would supply both the Háthmati Canal during the dry season and the Khári Cut) and on the Bokh near Parántíj, which would be partly filled by the surplus monsoon discharge of the Háthmati River and would supply the Khári Cut only, are under consideration.

60 old tanks, each irrigating an area of 50 acres or more, were ordered to be brought on the Public Works list for repair in view to their systematic maintenance and improvement where feasible. One of these works was repaired during the year at a cost of Rs. 1,725.

Uru Salt-works Watersupply. A small scheme for the water-supply of the salt-works at Uru was commenced. The source of supply is a well on the edge of a tank at the village of Uru, $3\frac{1}{2}$ miles from the salt-works. The water is to be raised by bullock power into a cistern near the well and conveyed thence by an iron pipe to a covered masonry cistern capable of holding one day's supply for 2,000 people, which is in the centre of the salt-works. The cost of the works is estimated at Rs. 15,290.

Bháder River Works. This river improvement scheme would have been entirely completed but for some damage done by heavy floods. Groins were constructed and breaches in the river-bank near Patna were repaired, the object being to redivert the river into its old course past the town of Dhandhuka to the Dholera creek. The expenditure was Rs. 9,827, which was met from a local fund known as the Dholera Dharam Taláv Fund. This work and other works for the water-supply of towns mentioned in this section were carried out by the Irrigation Department, and although not irrigation works are included here for convenience.

Kaira.

An enquiry into the statistics of old works of irrigation in this collectorate was completed. There are 1,675 tanks in existence irrigating 15,754 acres, assessed at Rs. 85,359, including the land assessment. Only 49 of these tanks irrigate over 50 acres. The whole have hitherto been maintained by the people themselves with assistance from local funds in the case of tanks used for water-supply, and it has been decided that this system, which has worked well, shall be maintained; special works of improvement, where such give the promise of adequate return on the outlay, only being undertaken by Government.

Broach.

A return was rendered showing in all 20 irrigation works as existing in this collectorate. These irrigate only 768 acres assessed at Rs. 6,544. Their maintenance is to be left as heretofore to the people.

Surat.

The old works in this collectorate include in all 1,641 separate tanks irrigating 17,848 acres assessed at Rs. 2,20,576. Of these 251 works, irrigating 10,873 acres, assessed at Rs. 1,43,691, of which Rs. 47,065 is for water-rate, were ordered to be brought on to the Public Works list for repair. During the year improvements to 10 of these tanks were effected at a cost of Rs. 2,372,

and 18 tanks were repaired at a cost of Rs. 7,914; surveys of some of the tanks were also undertaken. The improvements effected consisted mainly of increased provision for the escape of flood waters after the filling of the tanks.

The Hartala Tank was only replenished to 1.60 foot on the sill of the outlet sluice during the monsoon, and at the end of November the tank was empty. No irrigation was, therefore, possible during the dry season.

Khandesh. Hartala Tank.

The storage in the Mhasva Tank at the end of October was less than one-seventh of the whole capacity of the tank. supply failed entirely at the end of March 1882, and the tank was empty for the first time in its history.

Mhaswa Tank.

The Mukti Tank was little more than half full. Fortunately the storage, small though it was, sufficed for all requirements and River Works. saved all the crops in the irrigated land of eleven villages.

Lower Panjhra

The cost of maintenance for the year amounted to Rs. 4,706. The rainfall, which was very favourably distributed, amounted to 25 inches at Kolgaon as against 13 inches of the year before; the consequence was a large falling off in the irrigated area, which was only 1,161 acres as compared with 3,224 acres of 1880-81.

Jamda Canals.

General repairs were carried out from Imperial Funds on 41 old irrigation works at a cost of Rs. 23,491 as compared with Rs. 6,610 on 20 works during the previous year. Of the works repaired, 19 were in the Khándesh Collectorate and 22 in Násik. There was also an expenditure of Rs. 5,438 on 50 works from the Pátfála Cess Fund, which is voluntarily contributed by the people for the repairs of their irrigation channels.

Old Works.

One bandhára (Kikwári) constructed during the year was completely new, the jághírdár of the village aiding in its construction by contributing somewhat more than half the cost. Another bandhára (Sirasmani), which was destroyed by the great floods of 1872, was restored during the year; while the reconstruction of a third (Datarti), which had been in disuse for nine years, was commenced. A fourth work (Shahada) had for many years yielded only a small portion of the assessed revenue in consequence of the bad condition of the works, and complete repairs of the whole were undertaken during the year. A fifth work (Sompur) was extended so as to irrigate a fresh command of 62 acres. Extensive repairs amounting to Rs. 1,970 were carried out on the Bez Bandhára and channel, the most important work (with one exception, Patna,) in point of revenue in the whole district.

The revenue yielded by the old works in the Khandesh Irrigation Division was Rs. 1,66,535, of which Rs. 1,32,550 is the water share.

This system, including the storage tank at Waghad, and the Palkher and Wadali Canals, the Olhar Tambat and Sukina Bandharas for the distribution of the water, has now reached River Works. an interesting stage of progress. The canals and distributaries are virtually complete, and the most is being made of the river's natural supply, which is quite insufficient except during the mon-

Násik. Kadwa PRODUCTION AND DISTRI-BUTION.

soon season. The storago works at Waghad designed to supply the deficiency during the dry season were in progress during the year, but the system will not be complete until after the rains of 1883. The work on the Palkher Canal is practically complete. In all 11 miles of main canal and 13 miles of distributary were open during the year, and the net area under command was 11,486 acres, of which 1,023 acres were irrigated. The Wadali and Ojhar Tambat Canals, the other distributaries of the Kadwa system now in operation, irrigated areas of 226 and 100 acres. The Waghad Tank was carried on by contract, and about one-half the total earthwork of the dam has been done, besides the puddle and concrete trenches and some of the pitching.

Old Works.

The new bandhára at Tisgaon in the Dindori Táluka was completed at a cost of Rs. 3,462. Of the other works in this collectorate lying in the catchment of the Godávari River, 28 were repaired, or their repairs were undertaken during the year: the expenditure was Rs. 3,747, of which Rs. 208 was contributed by the villagers. New bandháras were sanctioned for the villages of Bhutane and Chickhlambe to replace existing works described as worn out.

Ahmednayar, Pravara River Works,

The portion of this collectorate draining into the Godávari River is included in the Násik Irrigation Division. The only works in that tract are those comprised in the Pravara River system, which consists of the Left Bank Ojhar and the Lákh Canals already constructed, the Maladevi storage tank proposed for immediate execution, and the Right Bank Ojhar Canal proposed as ultimately desirable for the complete development of the scheme as a means of protecting a part of the country which has suffered greatly in recent years and is constantly liable to suffer from deficient rainfall. "The original works connected with the scheme were commonced in 1868 as relief works. Since then, 1875-76 was a bad year, 1876-77 was the great famine year; 1877-78, 1878-79, 1879-80, 1880-81 have all been more or less very unfavourable seasons as regards this section of the country. The current year 1881-82 is an extremely bad year, in many places the crops having been a total failure" (extract from Report of Commissioner, C.D., on Pravara Project). The complete project for the Pravara River scheme, including the two existing canals and the further works proposed, of which the storage work at Maladevi is of vital importance, was submitted to Government during the year.

Left Bank Ojhar Canal, This work may be described as complete with the exception of distributaries to command the area at the tail of the canal, which it is useless to construct until the storage works at Maladevi are completed. The net area under command is 21,030 acres, of which only 14,763 acres are under near command, the balance being unprovided for by distributaries. 19 miles of nain canal and 17 miles of distributaries were in operation during the year. The area irrigated was 3,093 acres as compared with 952 and 3,161 acres in the previous two years.

Lakh Canal.

The net area under command is 23,026 acres, of which only 8,612 acres were under near command when the year opened,

and 13,100 acres at its close. The supply is so short that very little land can be irrigated after December, and it is not, therefore, proposed to complete the entire system of distributaries until the Maladevi Tank is constructed. 23 miles of main canal and 12 miles of distributary were in operation during the year. The area irrigated was 316 acros as compared with 342 acres in the previous year.

This work is situated in the portion of the Ahmednagar Collectorate draining into the Bhima River and may be described as complete. The area irrigated was 785 acres as compared with 756 acres in the provious year.

Bhatodi Tank

A preliminary survey of the Hanga River, a tributary of the Bhima, was undertaken, and five sites for storage tanks were selected for further investigation. Generally the project is for storage on the Hanga and a canal on the left bank of that river extending to above the táluka town of Shrígonda commanding a large tract of highly arable land extending to the bank of the Bhíma Rivor in which the rainfall is most capricious and uncertain.

Surveys.

The head-works at Lake Fife are entirely complete with the exception of a length of 503 feet at the west end of the waste. Mutha Canal. weir, which is kept one foot below full-supply level with a view to concentrate the action of floods on the point where the natural surface of the ground joining the waste channel is high and requires removal to give the water a free escape and increase the discharging capacity of the waste-weir.

Poona.

With the main distributaries on the Right Bank Canal considerable progress was made, and some slight extension of the distribution pipes for the Poona water-supply was carried out. The motor system of charging for the water was further extended and developed, resulting in further increase of revenue from this source.

The werr at the head of the Left Bank Canal across the waste channel from Lake Fife was completed. The plantations at the head-works and on the canal banks were extended and maintained, but progress in this respect will be greater when the works of construction are all complete and time can be devoted to treeplanting.

At the beginning of the year, owing to the excessive loss of water from absorption in the main canal and prospective shortness of supply towards the close of the hot weather, irrigation was restricted to the first 29 miles on the Right Bank Canal; during the subsequent monsoon and rabi seasons the supply was continuous to the 65th mile of main canal. The supply is entirely dependent upon the storage at Lake Fife from the end of November until the commencement of the following rains. On the 1st April 1881 the water in the lake stood at a depth of 1467 feet above the sill of the canal sluices; at the beginning of June it had fallen to 6 feet, and on 15th of that month it was only 5.15 feet above the sill, at which level it was difficult to maintain any flow, as the water in the canal was nearly level with that in the lake, and there was no head. The supply continued deficient Chap. IV.
PRODUCTION
AND DISTRIBUTION.

until 1st July, when heavy rain commenced, and the lake entirely filled; on 3rd November 1881 the level was at full supply, and on 31st March 1882 it had fallen to 13 feet above the canal sill, or 167 feet below the level on the corresponding date in the previous year.

The area irrigated was 8,973 acres, showing a decrease of 3,228 acres as compared with the previous year, due to the more favourable character of the rainfall and consequent decrease in area of the poorer description of crops for which water was taken. The maintenance and repair of the works cost Rs. 40,531, of which Rs. 15,696 was on account of the Poona water-supply. A new scale of water-rates was introduced from 15th October 1881, under which the crops are charged for in five classes at rates varying from Rs. 25 for the best descriptions of produce grown close to Poona to Re. 1 per acre for inferior crops requiring less water.

Matoba Tank.

This work may be regarded as complete; its supply is practically as reliable as that on the best of the works in the country, as it is dependent on surplus monsoon water from the Mutha Right Bank Canal. The area irrigated was 1,235 acres as compared with 1,593 acres in the previous year.

Shirsuphal Tank.

The work is practically complete, but unfortunately the rainfall of the year was very light, and the supply sufficed for only 109 acres of kharif; the tank was empty on 30th December, and there was no rabi irrigation. This is the more to be regretted, as the people are very eager in availing themselves of the means of irrigation in this valley. There is, however, no remedy; like all tanks of its class and situation it must depend for its supply on the local rainfall. Facilities do not exist for increasing the catchment area of the tank.

Bhádalwádi Tank. The Right Bank Channel was completed during the year and the work was brought into operation for the first time. It has a storage reservoir of a depth of 35 feet. The Right Bank Channel is 6½ miles in length and commands 1,900 acres. The Left Bank Channel, which remains to be constructed, is designed to be 3½ miles in length and will command 1,100 acres. The work irrigated an area of 148 acres, and at the end of the year the water in the tank stood at a level of 29 feet above the outlet.

Old Works.

6 old works of a permanent character, irrigating an area of 566 acres, assessed at Rs. 4,613, of which Rs. 4,243 is due to irrigation, were brought on to the Public Works list for repair.

Nira Canal.

The earthworks of a section of this canal were commenced in 1876-77 for the employment of people suffering from the effects of the famine, and continued in subsequent years as a relief work in a fitful manner. The scheme had been matured in 1873, but it was not carried out, owing to financial difficulties. The policy of constructing irregation works which experience had shown did not return a fair interest upon the outlay, had also been under consideration, but in 1881 the Secretary of State sanctioned the work being carried out as originally designed, the cost to be charged to Protective Works. It comprises a canal on the left bank of the Níra River, with head-works at Vir, and will extend

to the town of Indápur, a length of 105 miles as finally aligned on the ground. The supply of water is drawn from the river during the monsoon and early part of the cold weather, and is maintained throughout the rest of the year by very extensive storage works to be constructed at Bhatghar. The reservoir will contain 4,642 millions of cubic feet, and with the aid of sluices, to be closed at the end of the season, this will be increased to 5,642 millions. It is to be formed by a masonry dam 101 feet in height and 3,129 feet in length, and the canal will command 279,680 acres of culturable land in the Purandhar, Bhimthadi and Indápur tálukas of the Poona Collectorate. The cost is estimated at Rs. 33,39,260 for works only.

The excavation for foundations of the dam at Bhatghar has been commenced and considerable progress made, the rock having been laid bare across the whole of the river, and sound rock obtained for greater portion in the garden on the north side and also at a higher level on the south. The masonry of the over-fall portion of the main weir in the river and Vir nala was raised, and considerable progress was made in the main canal.

The earthworks of the canal were nearly completed for a total length of 35 failes. From that point to the end the works are in the state they were left at the close of the famine.

The construction of all the aqueducts (10 in number) within the first 35 miles has been taken in hand: 8 were nearly complete, and the remaining 2 were in progress.

The principal outlay during the year was on plantations on the margin of the tank and on the canal banks, with which great progress was made. The rainfall during the year at the tank site was 20·17 inches, and the tank was replenished, but not entirely refilled. The supply of water was, however, ample for all three of the canals throughout the year. The area irrigated was 1,230 acres as compared with 1,087 acres in the previous year.

The canals for the distribution of the water were in progress; the excavation of the Right Bank Canal was completed to the 9th mile, and the Left Bank Canal is complete as far as the 6th mile.

The works for the supply of the town of Sholapur from the Ekrák Tank Canal were entirely completed at a cost of Rs. 2,18,677, and after being maintained for six months were handed over to the municipality on 21st September 1881.

The works for the supply of the town of Pandharpur have been improved by the laying of a line of iron piping connecting the tank with the town distributary reservoir and by the provision of filter beds to the latter.

The history of this work is very similar to that of the Nira Canal. The scheme was in abeyance owing to the financial pressure and uncertainty as to the prospects of irrigation in the Deccan until the famine of 1876-77, when the work was undertaken for the employment of the people. During 1881-82 sanction was accorded to the completion of the entire scheme from the grant for protective works, and the work was proceeded with vigorously. The dam which is of earth, 9,080 feet in length and

Sholdpur. Ekrůk Tank.

Ashti Tank,

Sholápur Watersupply.

Pandharpur Watersupply,

Mhaswad Tank. Chap. IV.
PRODUCTION
AND DISTRIBUTION

80 feet in maximum height, made considerable progress. The pitching on the water face was commenced, and work in the river bed was also in progress, but the closure of the dam was not attempted. The convict gang hitherto employed at Ashti was transferred to the Mhaswad Tank.

Krishna Canal

The length of main canal in operation during the year was 35 miles as compared with 33 miles in the previous year. The increase of 2 miles is due to the extension which was completed and opened for irrigation. The length of the branches in operation was 20 miles as compared with 15 in the previous year. The work was maintained at a cost of Rs. 9,103. The area irrigated was 4,346 acres as compared with 3,555 acres in the previous year.

Sátára Wateraupply The scheme for the water-supply of Sátára from a storage reservoir at Khas was in progress. The dam was commenced and the line of the channel thence to the head of the old masonry aqueduct at Yeoteshwar was marked out and the excavation was in progress for a length of 10 miles. The expenditure has been Rs. 24,734 out of estimate of Rs. 2,51,180.

Kaládgi Colleotorate This work, the Muckhundi in Bágalkot, has been commenced and Rs. 30,530 spent up to the close of the year out of an estimate of Rs. 99,930.

Repairs and improvements to two old tanks in this collectorate were undertaken, and investigations in connection with proposed schemes on the Don River were in progress.

Belgaum Collectorate Gokák Canal. The convict gang, numbering on an average 472, was employed throughout the year on the deep rock cutting in the first $2\frac{1}{2}$ miles and fair progress was made, the total value of the work done by the gang being Rs. 11,996. A large number of tanks in Belgaum and Dhárwár was repaired and improved.

SIND.

Regári Division Desert Canal. The falls at the 30th mile, which were commenced in 1877-78, were completed during the year, the work having been suspended for some years owing to want of funds.

The Muradwah, a branch of the Desert Canal dug to irrigate the country between the Desert Canal and the Kashmor Bund, leaves the Desert Canal about half a mile above the head regulator, and crosses the Kashmor Bund at the 44th mile. The main canal is 32 miles long, and a branch, 10½ miles long, takes off at the 19th mile and runs to Kandkot. The excavation and embankments of the main line are nearly completed, and the branch line is in a forward state.

The estimated area to be irrigated from the Muradwah has been given out to the cultivators, and arrangements for the distributaries are being made. The estimate for excavation, embankments, and head sluice is Rs. 1,25,665, and the expenditure Rs. 75,206. The allotment for the Desert Canal was Rs. 82,968 and the expenditure Rs. 82,847, the total expenditure up to date being Rs. 6,25,745.

during the year.

kurriahs have been completed, as well as 133 others. The expenditure was Rs. 65,499, the total expenditure up to date being

The embankments have been strengthened where they were evidently too woak. The 22 sluices at the heads of zamindars' Began Canal.

Ghár.

Rs. 10,99,212. The new inner loop line behind the 3rd and 4th miles of the Jhali Bund, which has been included in the capital account of the Ghár, was completed, together with the two sluices, at an expenditure, during the year, of Rs. 13,217, the total expenditure being Rs. 24,193 against an estimated amount of Rs. 30,709. ordinary clearances and repairs, as well as the abkalani establishment maintained on the Ghar and Jhali Bund, cost Rs. 84,010

The gang of prisoners, numbering on an average about 550, Eastern Nára. employed on the protective embankment during the year did work to the value of Rs. 56,834 exclusive of the value of that done in March 1882, which had not been measured. The embankment was completed to the end of the 24th mile, with the exception of parts in the 5th, 6th and 7th miles which have been left incomplete in order that in the case of a flood the gang might not be without work. Work was in progress in the 25th and 26th miles, and there are still 8 miles untouched. The total amount expended during the year was Rs. 17,302.

Thar Canal.

The allotment of Rs. 50,000 for "excavating a channel from Eastern Nára the head of the Thar Canal to the soa" was all expended together with a further sum of Rs. 17,886, which was transferred from the "Protective embankment, Thar Canal". There were still about 182 lákhs of cubic feet of earthwork remaining to be done, which would probably be completed during 1882-83. The total amount of the estimate is Rs. 3,80,258, and the total expenditure Rs. 2,40,214.

An allotment of Rs. 10,000 was given for this work and the Great Marak. amount was expended on three of the minor branches, the work done consisting of simple excavation and formation of side slopes.

Pinyári.

The construction of the regulating bridges at the head of the Pinyári was continued, the principal work done being the completion of the pavement and superstructure and the erection of a shed for the regulating baulks. The allotment for the year was Rs. 27,000 and the expenditure Rs. 25,558, the estimated amount being Rs. 60,591 and the total expenditure to date Rs. 56,819. The bund across the Duja Chandan, a little below the tail reservoir of the Pinyári in the Jati Táluka, was successfully constructed during the cold weather, the salt backwater being excluded without a resort being had to any temporary expedients, which materially lessened the cost of the work.

CHAPTER V.—REVENUE AND FINANCE.

The total receipts in 1881-82 in all departments amounted to Rs. 11,42,03,031 and the expenditure to Rs. 10,57,51,521, giving a surplus of Rs. 84,51,510. The revenue was less by 20½ lákhs than the revenue in 1880-81, a decline occurring in the receipts from customs, opium, mint, superannuation, marine and telegraph; but on the other hand, there was an increase in the receipts from excise and local funds. The expenditure was less by 83 lákhs than the amount in 1880-81, when heavy payments were made on account of the war, but a larger outlay was made on public works.

CIVIL IMPERIAL TRANSACTIONS.

Receipts, Increase.

The receipts credited to this head amounted to Rs. 8,19,88,959, and is both less than the estimate for the year and the revenue of the preceding year. The items which show a noticeable increase are land revenue, forests and interest; but the greater decrease under customs, opium, mint, superannuation and exchange caused a not decrease as compared with 1880-81 of 371 lakhs. The large increase of over 81 lakhs under land revenue was caused by the recovery of arrears and the great extension of cultivation. particularly in Khandesh and Hyderabad in Sind. There were also unexpected receipts from the sale of building sites in the city of Bombay. Unusually large sales of timber and sandalwood caused an increase of over 3 lakhs in the receipts from forests, which would have been larger if the demand for railway fuel had not declined in Sind, and under interest the increase of 12 lakhs is due to large recoveries from the Bombay Port Trust and from the Bombay Municipality which had added to its capital debt by the amount taken up for the Tulsi Water Works scheme. On the other hand several Native States and district municipalities had paid off the loans which they had received.

Receipts, Decrease, The large decrease of 10\frac{3}{4} lakhs in customs receipts had to a great extent been anticipated, but the actuals proved to be even less by 1\frac{3}{4} lakhs than what was estimated. The trade in the latter part of the year was not so brisk, the export of rice declined, and the abolition of import duties from the 10th March 1882 in itself caused a loss of 2\frac{1}{4} lakhs. The expectations regarding opium were completely disappointed, as the receipts were 70\frac{1}{4} lakhs less than estimated and nearly 34 lakhs less than the amount received last year. The difference is attributed to the competition of the Persian drug in the China market and to the great extension of opium cultivation and manufacture in China itself. In salt although the actual is only Rs. 14,400 less than the actual of 1880-81, yet it is greater

by 13 lakhs than the estimate, very large exportations having been made from Khárághoda in February. The difference of over 3 lakhs under mint was not expected, and is due to a less amount of bullion having been coined in the year. Under superannuation the estimate was fairly realised, although there is a decrease of Rs. 91,400 in the receipts of the military fund as compared with the preceding year. The decrease under miscellaneous is owing to fewer supply bills on district treasuries being sold. The gain by exchanges is 13 lákhs less the year, owing to the reductions of the rate of drawing to 1s. 8d.

The total expenditure amounted to Rs. 1,97,37,934, which is Expenditure. more by 69½ lákhs than the figure in 1880-81 and 57 lákhs more than was anticipated. Compared with preceding year the items of interest on service fands, salt, municipal departments, political agencies, allowances and assignments and loss by exchange show a conspicuous increase, while there were noticeable savings under mint and superannuation.

The increase of 21 lakks under interest is due to the increase of deposits in the Favings Bank stimulated by the higher rate of interest. Under refunds the expenditure was considerably higher than was expected, and over half a lákh was paid to the Government of Goa as its share of the customs under the treaty. The exhaustion of the stock of salt at Khárághoda obliged large purchases to be mado in Goa on Government account, and hence the increase of 11 lakhs, although these purchases were much less than what had been provided for. The decrease under must is chiefly nominal, and to some extent is due to less work having been done. The cost of the consus, the registration of the land trade and the steam warning signals increased the charge under minor departments by nearly a lakh. A large provision for the local purchase of stationery was made, but was not availed of to any extent, as the articles required were not procurable. The charges connected with the administration of the newly-acquired villages near Aden and larger darbar presents account for the increase under political agencies. The payment of Rs. 60,000 to the Wali of Kandáhár is a new charge under allowances and assignments. The charge under superannuation in the previous year on account of the payment of bonus to retired officers of the Public Works Department and passages for families of military officers were exceptional, and hence the decrease. heavy drawings of the Secretary of State in Bombay caused a large increase under loss by exchange.

DEBT AND REMITTANCES.

The total receipts under this head were Rs. 40,76,52,380 and the expenditure Rs. 45,69,19,444. The particulars are given in the Appendix. Rs. 5,40,000 was recovered on account of loans made to Native States, municipalities and landholders and Rs. 2,58,475 was advanced to landholders and local-fund committees. Nearly 9 lakhs was received on account of the several pension and provident funds and 4½ lákhs was paid. Over 50 lákhs was deposited in the Savings Bank and 571 lakhs was withdrawn. moiety of the surplus profit earned by the guaranteed railways and paid as the share of Government was 27½ lákhs.

Chap. V.
REVENUE
AND
FINANCE

At the close of the year the cash balance was Rs. 187 lákhs, of which 46½ lákhs was in reserve, and the balance was distributed amongst the different treasuries.

MINT.

Comage.

The amount of silver coined and put into circulation was Rs. 1,33,85,242 including Rs. 9,62,000 of the new Portuguese Indian coinage. Copper coins were also struck to the amount of Rs. 50,000 for the Goa Government in accordance with the terms of the Anglo-Portuguese Monetary Convention. During the year the imports of gold and silver amounted to (approximately):—gold 359 lákhs, silver 575 lákhs; of which I lákh of gold and 135 lákhs of silver were exported, leaving the net imports of gold and silver 358 and 440 lákhs respectively. Of the 440 lákhs 230 lákhs were sent to the Mint for coinage. The remainder probably found its way to the States and districts which had been depleted of the precious metals during the famine.

Efforts have been made to reduce the loss in the Melting Department by obtaining thin bars free from air holes, but these have been lutherto unsuccessful, and probably the recoinage of dumb wasters and the increase in proportion of scrap, &c., has prevented the increase in the loss of the Melting Department from being compensated for by the reduction of loss in the Mechanical Department.

But though the actual working losses stand slightly higher, the general economy from the employment of thin bars quite outweighs the slight increase that seems to take place under the head of "Losses". The daily outturn of work is greater than with thick bars, and the resulting slip is of more uniform thickness than that from the thick inch bar, unless the slip of the latter is carefully annealed. Careful annealing means delay in outturn and a considerable expenditure of coal, which is all saved with the thin bar. For an outturn of 2 or 3 lákhs a day there would be required nearly a ton of coal for the annealing furnaces; a clear economy of this nature effected daily whenever comage is going on, combined with diminished payments for extra time, will more than cover the slight extra loss that results from the increased friability of the silver used.

Bullion tendered tor comage. The number of tenders was 222, representing bullion to the value of 230 lákhs against 410 tenders of bullion valued at 250 lákhs in 1880-81.

The silver bullion tendered for coinage during the year was classified as follows:-

	1881-82	1880-81,
Imported from Europe	91 å lákhs.	200 lákhs.
Do. China and Ame-	_	
rıca viâ Hongkong	133 լ	$6\frac{1}{8}$
Country silver and ornaments	4	10
	1	$25\frac{1}{4}$
37	4 1	 -

The diminished tenders of local silver ornaments and coins probably afford some proof of the revival of wealth in those districts which had been impoverished by famine.

Mint Building.

By the electro-plating process of adjusting coins to the standard weight 7½ lákhs of heavy bits were reduced and 6 lákhs of light bits were raised to the Jandard during 1881-82, against 9½ lákhs of heavy and 7½ lákhs of light bits adjusted in the previous year. The cost of establishment has been Rs. 557 for the year; to this has to be added Rs. 65 for making and repairing frames to carry the bits. The cost of recoining the 6 lákhs of light bits electroplated would have been Rs. 3,000, which, after deducting Rs. 622 for establishment, &c., shows a saving of Rs. 2,378.

The new roof of the melting room was finished during the year: the ventilation is good, and the room keeps fairly cool even when heavy work is going on.

The new Mint boundary wall was also finished. The old wall stood too close to the works, and it was thus possible for the men to throw over the railings silver and other Mint property which they could pick up at night. Now there is a clear open space of ground between the buildings and the boundary wall, which can be commanded by two sepoys, and no labourer can approach the railings without being detected.

The comparatively small coinage not only gave leisure for completing these most useful additions and for overhauling the Mint machinery, but enabled the department to give assistance to the currency in shroffing many lakes of coin, and also in sorting old copper coinage.

The receipts of the Mint were-Receipts ... Rs. 3,20,368 Mint duty, &c. and 31,423 Expenditure. Gain in coinage " 10,798 Other receipts 3,62,589 Expenditure-48,745 Loss in coinage " Establishment 2,27,872 ... " 65,321 Other charges 3,41,938 Surplus ... Rs 20,651

CURRENCY.

The sub-circles of Akola and Nagpur were abolished from the 31st March 1882, but including their outstanding circulation, Rs. 4,21,295 on that date, the total circulation was as follows:—

Number of notes for Rs. } 5 10 20 50 100 500 1,000 10,000 1,000 1,24,830 4,49,587 90,358 53,828 65,788 5,070 10,444 675

Pieces. Value.

Total ... 800,580 3,59,26,380

The value is 41 lákhs higher than on the same date in 1881, and it appears that the circulation of the 5 and 10 rupee notes, and especially the latter, is increasing very largely. There is also a steady increase in the circulation of notes of higher values,

Chap. V.
REVENUE
AND
FINANCE

except in those of Rs. 500 which have declined, while notes of Rs. 10,000 have increased from 287 to 675. The reserve of silver coin and bullion held against the note circl ration on the above date was Rs 1,72,98,790.

The issues to the public of notes of the Bombay Circle were a little over 1,959 lákhs and less by 1½ lakhs than the value in 1880-81, the incerpts were nearly 1,923 lákhs, or 2 lákhs less Foreign circle notes valued about 207½ lákhs were received and 210½ lakhs were remitted to the circles concerned. Except in December and January such notes were not freely cashed, as owing to the scarcity of coin in the treasuries it was necessary to restrict the privilege to travellers.

547 lakks of coin were received besides 5½ lakks of small coin, and the issues were 530 lakks of coin and 5 lakks of small coin. The receipts were a little smaller and the issues a little larger than the figures in the pieceding year. Nearly 10½ lakks of shroff-marked coin were received, and the amount is considerably larger than the amount in 1880-81, as such coin is now received at par, unless it has been traudulently reduced in weight. With the exception of ½ lakks the whole of it was received from Lahore and Madias. 13½ lakks of small silver coin were received and 8½ lakks were issued, and the figures are very much in excess of those of 1880-81, but the receipts were chiefly from the Mint Nearly 154 lakks of bullion were received for conversion into coin, which is considerably less than the amount in any of the five preceding years

The Central Provinces and Berar were included in the Bombay Circle from the 1st September 1881, and the transactions in notes at these agencies amounted to 14½ lákhs. A currency depôt for coin was established at Shikarpur to serve as a feeder to the treasury at Shikarpur. During the year Rs. 6,850 was paid for lost notes on indemnity bonds, and in no instance has any loss been caused to the department in consequence.

Land Revenue.

The agricultural year commences after the beginning of the rains, and the revenue demands and collections are, therefore, made to coincide with the agricultural year, and date from the 1st August. The gross land revenue for the year recoverable from the people was Rs. 3,85,45,381; but after deducting the alienations, Rs. 67,92,867, and adding the miscellaneous sources of revenue, such as quit-rents, sale of grass lands, &c., the total Government revenue was Rs. 3,17,52,517. A part of this sum is due to irrigation and credited to that department, and a further part, Rs. 5,58,963, has been remitted for various causes. The revenue for collection pertaining to the year was, therefore, reduced to Rs. 3,11,08,835, of which Rs. 2,99,09,177 was actually realised within the year and a balance of Rs. 11,99,655 was left outstanding.

The gross land revenue is liable to increase by the action of the survey in raising rates and to decrease by the resignation of occupancies and by the destruction or deterioration of land. From these causes, notwithstanding a considerable increase in different districts by the increase of rates, the resignation of lands in Gujarát and elsewhere caused the final result to be only a little over 4 lákhs more than in 1880-81. The decrease is very noticeable in Surat and Broach; but the increase is general in the rest of the Presidency, and particularly in Sind, where the increase is as much as 6 lákhs. The alienations for the most part have been reduced to fixed sums, but there are still certain causes of variation, and the result is a small decrease. There has been a small increase in quit-ronts, from the sale of grass, and the cultivation of river-beds; but there has been a large decrease of 24 lákhs under miscellaneous items which appears to have occurred in Surat. The receipts from notice fees and processes have decreased, which points to greater ease in the collection of the revenue. Under irrigation there has been a small decrease, which is chiefly noticeable in Sind.

It is the practice to remit the increased revenue assessed by the survey in the first year of its introduction, and in this year nearly 2 lakhs have been semitted for this reason. 2½ lakhs have been remitted for the failure of crops in Ahmednagar, and nearly 1½ lakhs for other causes in other districts; but half of this is allowed in Kanara as a special inducement to extend cultivation.

The collections were almost equal to the collections in 1880-81 and 3½ lákhs of arrears were collected. Over 4½ lákhs in arrears were written off, chiefly in Ahmednagar and Kaládgi, although in the latter district it is mostly due to the famine arrears which

Chap. V.
REVENUE
AND
FINANCE.

have not been cleared off the books; but the greatest part of the irrecoverable arrears appears to have accumulated in Sind, where as much as 2½ lákhs was written off. The kalance for the year outstanding amounts to 12 lákhs, and is not 4 per cent. on the revenue.

Canal Revenue.

The direct receipts in the financial year amount to Rs. 3,54,033 as compared with Rs. 2,67,255 in the previous year, and this has been noticed under the section on irrigation.

Sources of Imperial Revenue other than Land.

CUSTOMS.

SEA CUSTOMS.

Port of Bombay.

The Imperial revenue, Rs. 61,29,358, both gross and net, is lower by 10 lakhs than that of the previous year, which, however, was an exceptional one, but it is considerably higher than the revenue of 1879-80 and nearly on a level with the average of five years ending 1878-79. The duty on spirits increased by 11 lakhs, due to larger imports of whisky, but on general merchandise the duty decreased by 10½ lákhs, mainly on cotton piece-goods, raw silk and sugar. On cotton goods the decrease in duty is 51 lakhs, owing to exemption from duty of piece-goods made from lower counts, to stocks in hand being large, and to the abolition of all duties in March. The tariff valuations in 1881 had been raised on grey piece-goods, raw silk and other goods, but had been lowered on metals, sugar and dyes; yet, as smaller quantities of goods were imported, the raising of values did not increase the revenue. The free descriptions of cotton goods in 1880-81 formed 70 per cent., but in 1881-82 they formed 85 per cent. of the total imports. The manufacture of the coarser goods have been left to the local mills, and importers have striven to introduce goods which would just escape the duty. These have come into favour, and since the total abolition of cotton duties no great increase has been made in the import of the finer goods; the coarser cloths are found to wear better, and are popular with the poorer classes, who are the chief buyers.

A great and important change in customs duties was made by Act II. of 1882, which abolished all import duties except on arms and ammunition, liquors, opium and salt. Rice continues to be liable to export duty. This change caused a loss of about 3½ lákhs for the part of March in which it was in operation. A large amount of Rs. 38,811 was refunded during the year, mainly owing to the order of the Government of India, under which the term railway material was held to include all raw materials imported by railway companies to be worked up into their buildings and works. Rs. 65,209 were ropaid as drawbacks, which is considerably less than the amount in the previous year.

The export duty amounted to Rs. 1,95,000, which is a decrease of Rs. 87,000, chiefly due to the trade in rice having been found to be less profitable than the trade in wheat.

Chap. V.
REVENUE
AND
FINANCE.

The Provincial receipts amounted to Rs. 57,870, and the slight decrease is owing to the abolition of duties, as transhipment fees are only charged on dutiable goods. The expenditure, Rs. 4,97,352, is nearly the same as in the previous year and about 7.72 per cent. on the total collections.

The Sassoon Dock and the Arthur and Mázgaon Powder Works bandars were closed altogether for dutiable traffic, and the Customs Department was concentrated at Prince's Dock, the Carnac Bandar and the Town Customs House, where all dutiable articles were to be landed or shipped, the remaining bandars being left in the charge of the preventive establishment. It is often necessary for ships to be loaded or unloaded on Sundays, and with the concurrence of the Chamber of Commerce it has been settled that the test of urgency should be the payment of a fee varying from Rs. 50 to Rs. 200 by the person concerned, which, it is believed, will prevent unnecessary applications being made. 8 cargoes of kerosine oil arrived during the year and were tested previous to landing. They were found to be safe, with the exception of 3,200 cases which were re-exported to places beyond British India. Under the Native Passengers Ship Act the number of passengers whose embarkation or landing was supervised by the Preventive Branch of the Customs Department was 190,658.

Sind.

The customs revenue in Sind amounted to Rs. 5,41,214, less by Rs. 88,666 than the amount in 1880-81. There is a decrease under all heads except cotton piece-goods, rum, steel and woollen goods, but it is said that the trade of the previous year was exceptional, and the imports of liquor were affected by the withdrawal of troops after the war. The refunds were larger, owing to the ruling regarding railway material already referred to.

Continental Ports.

The total sea customs collection amounted to Rs. 26,818, showing an increase of Rs. 3,724 on the collection in the previous year, but they are considerably below the average of the previous five years. The import duties show a small increase of Rs. 1,068, due mainly to the Government share in the customs receipts at Cambay being larger than in the previous year. The export duties also show a small decrease of Rs. 1,183, which may be attributed to the operation of the Portuguese Treaty.

Land Customs, The revenue, Rs. 14,570, derived from land customs in 1881-82 shows a small increase of Rs. 872, as the share of Government in the duties on articles exported from Cambay was larger than in the previous year, but the revenue is much less than the average of the previous five years. Under the Portuguese Treaty duty is no longer collected on the Goa and Daman frontiers; and the only collections now made are on the Habsan or Rajpuri frontier, and are very trifling.

OPIUM.

The following statement shows the number of opium chests imported from Malwa, Meywar and Marwar and from the territory of His Highness the Gaekwar into Bombay, the amount of pass-fee realised, and the number of chests exported to China and otherwise disposed of in the year 1881-82, compared with corresponding particulars for each of the two preceding years and the averages of each of the three years ending 1872-73, 1875-76 and 1878-79:—

	Number of	Amount of Pass-fee actually	Number of Chests disposed of.			
YRARS.	Chests actually imported into Bombay.	realised and brought to account.	Exported to China.	Otherwise disposed of	Total.	
Annual average of 3 years		Rs.				
ending 1872-73	43.004	2,48,92,800	41,451	154	41,605	
Do. ending 1875-76	45,211	2,72,21,600	45,181	206	45,387	
Do. ending 1878-79 .	43,181	2,70,42,442	42,308	260	42,568	
1879-80	42,230	2,91,62,687	42,058	1,289	43,347	
1880-81	38,561	2,71,26,275	36,734	963	37,697	
1881-82	31,083	2,16,27,325	31,133	1,242	32,375	
Annual average of \$ years ending 1881-82	37,291	2,59,72,096	36,642	1,164	37,806	

The foregoing table shows a considerable falling off both in the imports into this Presidency and in the exports to China as well as in the duty realisations for the year 1881-82 as compared with previous years. The decrease is due to the extension of poppy cultivation in China, the comparative low prices ruling in that market for the indigenous drug, and the consequent diminution in the demand for the dearer Málwa opium. The subject attracted the attention of the Government of India, and they decided in June 1882 to lower the duty on opium intended for exportation to China by Rs. 50 per chest; the duty consequently on opium weighed at the Ajmere scales was reduced from Rs. 725 to Rs. 675 per chest of 140 lbs. and the duty on opium weighed at all other scales was reduced from Rs. 700 to Rs. 650 per chest. The decreased rates came into force on the 28th June 1882, and between that date and the end of the year (31st July 1882) sufficient time had not elapsed to show the effect of the reduction of duty on the export trade.

The subjoined table shows the quantities of opium sold in each division of the Presidency including Sind, Bombay and Aden, the amount of duty represented by the sales, and the amount of license-fees and other receipts realized from home consumption in each of the years 1881-82 and 1880-81, together with the averages

Chap. V.
REVENUE

The table shows a progressive improvement both in the aggregate licit consumption and in the realisations. The improvement is noticeable in almost all districts of the Presidency and is due to the measures adopted in recent years for the prevention of opium smuggling. There is no doubt that opium is still smuggled largely into this Presidency from Márwár, Meywár and Málwa, although seizures of contraband opium are effected almost daily through the efforts of Government establishments and the Native Chiefs on the frontier, many of whom have endeavoured to act up to their agreements in the matter of preventing the introduction of untaxed opium into this Presidency. So long, however, as the traffic in opium in the Native territories of Málwa and Rájputána remains unrestricted, it will be impossible, notwithstanding all the preventive arrangements adopted within the Presidency, to provent entirely the ingress of untaxed opium.

The rate for the issue of opium from Government depôts continued till the end of the year to be Rs. 13 per pound.

The consumption of licit opium in the Native States in Gujarát in each of the last four years was as follows:—

		1879-80	1880-61	
Baroda Cutch Káthiáwár Pálaupur Mahi Kántha Rewa Kántha Cambay	2; 3; * * *	Lbs. Lbs. 5,760 33,552 7,049 7,828 3,743 32,127 5,530 7,773 5,373 6,107 8,246 1,257 2,148	Lbs. 20,531 7,563 32,781 7,737 7,747 5,773 2,625	Lbs. 35,561 8,561 31,834 7,519 8,490 4,851 3,038
· · · · · · · · · · · · · · · · · · ·		2,519 97,046	84,757	99,854

^{*} The figures are for ten months only

Opium consumed in Baroda is manufactured locally, and does not contribute anything to the British revenue. Opium produced in Baroda, when exported to China, pays the Pritish duty leviable at the Government scales. More than 3,000 chests of opium have accumulated in His Highness' warehouses, of which about 200 chests were forwarded to Bombay on payment of the British tax. Arrangements are in progress for the transfer of the Government scales from Ahmedabad to Sidhpur, in which town His Highness' opium warehouses are situated, in order to facilitate the passing of the opium for export to China.

The duty collected at two-thirds the full pass-fee rate on opium consumed in Cutch and Káthiáwár in 1881-82 amounted to Rs. 28,537 and Rs. 1,06,113 respectively. No duty was levied on opium consumed in Pálanpur, Mahi Kántha, Rewa Kántha and Cambay.

SALT.

The number of salt-works open and in use on the 31st March 1882 was 412 against 413 on the corresponding date in 1881. The auxiliary salt-work at Uru near Khárághoda was opened during the year, and the duty on salt was reduced from Rs. 2½ to Rs. 2 from the 10th March 1882.

The gross revenue was Rs. 1,46,16,679, which is a decrease of Rs. 1,06,966 as compared with the revenue of the preceding year, but more than 9 lákhs greater than the average revenue of the preceding five years. The duty on salt for home and inland consumption has fallen off by 5 lakhs, but nearly 2 lakhs of this decrease is due to the reduction of the duty; and it would appear that the decrease is caused by smaller exports to places beyond the Presidency, while the removals to places within the Presidency appear to bave increased. The population is 25½ millions, but 51 millions of those do not contribute to the salt tax, including Sind, Káthiáwár and certain Native States in the vicinity of the salt-works. The quantity of salt consumed within the Presidency was 2,714,349 maunds, which gives an average of 11.21 lbs. per head against 10.41 in the preceding year, the rate of increase being nearly 1 lb. in all districts except Gujarát, where it was 1 lb. This is perhaps owing to the recovery of the people in the former districts from the effects of the great famine, but it appears that the consumption varies in different parts; for while in Gujarát it is only 8.69 lbs. per head, in all other districts it is 12.52 lbs. per head. This average includes all the uses to which salt is put, and does not merely represent the consumption by human beings. The diet scale in jails and hospitals allows 6 drams of salt a day per head, which is found to be sufficient. On this basis the average consumption should be 6 lbs. 7 ozs. per head, or at the outside 71 lbs. No doubt cattle consume a large quantity, but the difference between the average consumption in Gujarát and other districts cannot be explained by mere differonces in diet, and probably points to greater facilities for obtaining untaxed salt in Gujarát than else where, or it may be that the greater strength of the Runn salt which is used in Gujarát does

Chap. V.
REVENUE
AND
FINANCE.

not require so much to be used as would be required of weaker sea salt.

The duty on export of salt to Calcutta fell off by Rs. 1,80,707 owing to a decrease in the quantity exported. The price was high from August to December owing to the destruction of large quantities of salt by floods in July, and this cause served to check business. The exports to British Malabár increased as the old stocks of monopoly salt have apparently been worked off. The imports of English table salt and Sind salt increased to a small extent.

6,349,769 maunds of salt were manufactured at works in the Presidency, or nearly 10 lákhs of maunds less than in the previous year, owing to heavy rain in July and to the unusual height of the spring tides which caused enormous loss. 5,782,105 maunds were removed from the works, which is considerably less than the quantity removed in the previous year, but the deficiency was made up by increased removals from the Portuguese works into British India. 1,166,287 maunds were written off on account of loss and wastage, or 14 per cent., more than half of which was caused by the floods already referred to. The stock in hand has been greatly reduced and only amounted to 1,209,105 maunds, but the stock of Portuguese salt had increased, and a large quantity of salt at Uru had not been brought to account before the close of the year.

The exhaustion of the stocks at Khárághoda in the previous year led to a restriction upon sales which very largely affected the removals of salt from those works during 1881-82 for the supply of the Central Provinces. The North-West Provinces received nothing, and to Central India and Rajputana the direct supply by rail was greatly curtailed. But it was not possible to restrict the Brinjára traffic with pack bullocks, and it is believed that the decline of the railway traffic was more than made up by the activity of the Brinjara traffic. 233 pans were worked at Khárághoda, and the outturn was 890,816 maunds, which is somewhat less than in the previous year. The Uru works consist of 200 pans into which brine was let in by the end of November; but as arrangements for storage could not be completed in time, the salt was not gathered until May, after the close of the year, the yield being 785,121 maunds. The department is, therefore, in a position to manufacture nearly double the quantity of Baragara salt which it has hitherto done. The salt-works in the neighbourhood of Bombay gave a larger outturn than the quantity manufactured in 1880-81, and the export to all places increased with the exception of Calcutta and Foreign Malabar.

The wholesale price paid at the works by traders to the manufacturers ranged from 3 pies to 1 rupee a maund; the average price per maund was 2 annas. The price in the districts was generally about Rs. 3½ a maund, except in Dháswár and Kaládgi, where it was about Rs. 4½.

The supply of salt in Sind is obtained locally from the Mauripur works and the Saran deposits and to a small extent by imports

Sind.

from the Punjab. 168,120 maunds were manufactured and 8,353 maunds were received from the Punjab during the year. The quantity sold was rely 160,006 maunds, which exceeds by 12,776 maunds the average total consumption of the ten years ending 1878-79, but is not so large as might have been expected considering that the population has increased by more than two millions in the last ten years. The average consumption was 5 lbs. 12 ozs. per head, but it is believed that smuggling is practised to a large extent from Khairpur and Khelát. The Mir of Khairpur has agreed to close all his salt-works from the 1st January 1883, on condition of obtaining salt from British depôts at cost price.

The average price of salt was Rs. 4-2-8 per maund against an average of Rs. 5 in the previous year. The license system is a valuable check upon illicit sales, and as the number of licenses has increased very largely to 4,219, it indicates that no serious annoyance is caused by the inspections which have to be made. A new depôt was opened at Dilyar which will have the effect of lowering the price of salt in that part of the country from Rs. 5 to Rs. 2-10-0 per maund.

The receipts amounted to Rs. 4,40,277 and the expenditure to Rs. 82,797. The increase in the latter is due to increase of preventive establishment and to larger rewards for the detection of smuggling. 496 cases were dealt with, and the quantity of salt seized was 57 maunds.

Chap. V.

REVENUE AND FINANCE.

REVENUE AND FINANCE OTHER THAN IMPERIAL.

PROVINCIAL SERVICES.

The accounts of the Provincial Services may be briefly summarised as under :-

Provincial receipts Importal assignments Contribution from local funds	Rs.	. 2,08,53,970 1,44,24,075 47,042
		3,53,25,987
Deduct— Expenditure Contribution to local funds	"	3,39,32,593 5,09,290
	"	3,44,41,883
Surplus	19	8,83,201
Special Imperial assignments Opening balance	,, ,,	33,13,33 3 14,80,033
Total surplus	37	56,76,570

Receipts.

It was estimated that the Provincial receipts of the year would amount to Rs. 1,91,23,000, and they have proved to be better than the estimate by nearly 141 lakhs, due mainly to the very large increase of 113 lakhs in excise under the system by which the ábkári management of several Native States has been taken over by Government and to the greater consumption of liquor in a year of great agricultural prosperity, and also to the more effective measures taken to prevent the smuggling of opium. The increase in the land revenue over the estimate is only nominal, and is due to adjustments of the revenue of alienated lands and to enhanced survey rates which are nominally credited but remitted in the first year. In education the greater number of scholars attending Government schools caused larger receipts than were anticipated, a certain number of new toll bars caused an increase in the receipts of the Public Works Department, and a small increase was obtained over the estimate of receipts under salt and The receipts were much less than the estimate for general stamps, owing apparently to there being less necessity to borrow or sell among the people, and the same reason affected the increase from registration and from the license-tax, the money-lenders having had a very quiet year.

Expenditure.

The Provincial expenditure was a little more than 4 lakhs over the estimate. Cheap food and the decrease in the jail population made it possible to effect a saving of 2½ lákhs under law and justice, and as less stamps were sold to vendors the expenditure for discount was reduced. The abolition of the preventive line on the Portuguese frontier, which was a consequence of the late

treaty, also caused a saving of Rs. 70,000. These and other savings made it possible to spend over 3½ lákhs more on public works than was intended, to exhabish more Government schools and to pay more for education by results. The Government were also able to make a contribution of Rs. 56,000 to the railway companies in aid of their police.

The contributions received from local funds were Rs. 23,000 more than the estimate, caused by larger receipts in aid of the agricultural classes established in many districts and to a contribution for a leper hospital at Ratnágiri. On the other hand, the expenditure was higher by more than 1 lákh than was anticipated, as special grants were made in aid of school buildings, improving the Nágothna creek, the water-supply of Bijápur and the construction of the civil hospital at Dhárwár.

The Imperial assignment was increased by 30½ lákhs to Rs. 1,77,84,000. The Government of India were able to refund the 8 lákhs levied from Provincial Services in previous years and to make large contributions for the salt-works at Uru and Khárághoda and for compensation to Native States in connection with their agreements relating to opium. In addition to these a special grant of over 25 lákhs has been made to cover the loss to the Provincial revenue which will be caused by the temporary reduction of the revised revenue settlements.

Compared with the actual receipts of 1880-81 the receipts for 1881-82 were more by 121 lákhs, due to larger receipts under land revenue, excise, salt, education, stationery and miscellaneous, amounting in all to 15 lakhs, which was counteracted by a decrease of 23 lákhs under law and justice, assessed taxes and stamps. These differences have been explained above. the same way the expenditure was 73 lakks more than the actuals in 1880-81. The chief excess was in public works of over 43 laklis. Under land revenue, besides the adjustments already referred to, there were increases to the salaries of the settlement officers in Sind and a larger survey establishment entertained, but the appointment of a Deputy Collector in Sind was abolished. The strength of the excise department was raised, and the increase in schools entailed an increase in the cost of establishment. The appointment of Mahomedan inspectors for the supervision of Mussalmán education and larger payments as grants-in-aid and payments by results have also caused an increase under this head. The increase under medical has been caused by the reorganisation of the staff at the Grant Medical College, and the expenses of village registration under the Dekkhan Agriculturists' Relief Act have caused a small increase.

The items of increase give a total of nearly 11½ lákhs, but several items of decrease amount to nearly 3½ lákhs. The expenses for the collection of assessed taxes has decreased slightly, and under customs the reduction in the preventive establishment and the abolition of the preventive line have caused a decrease. The reduction of one Judge in the High Court, the cheapness of food, and small jail population, already referred to, explain the large decrease under law and justice.

Imperial assignments.

Comparison with 1880-81.

EXCISE.

Spirits.

Chap. V.

REVENUE AND FINANCE.

There has been a marked and rapid grown. The abkari revenue of the Presidency for, the past few years. From an average of about 32½ lákhs at the end of 1876-77 the revenue rose to 35½ lákhs in 1878-79 and to 44½ lákhs in the year ending 31st July 1881; and while the revenue has increased, drunkenness has diminished. In Thána this improvement is especially noticeable; and in Kolába it is remarked that while the general condition of the people has improved, the only class who are not making money are the Bhandharas, and that the untapped palm trees exceed those which are tapped. The increasing sobriety of the people is also reflected in the police returns, and has been generally noticed.

In all the fees on licenses for the sale of foreign spirits amounted to Rs. 1,24,606.

Mahura spirit is exclusively consumed in Gujarát, the Central Division and in Belgaum. In Sind the favourite drink is date brandy. The country spirit sold in Dhárwár and Kaládgi is manufactured from molasses and flavoured with the bark of the hewra and bábul tree, and it is proposed to extend the central distillery system to the latter districts. Toddy spirit is not consumed in any of these districts, but a tree-tax has been imposed on toddy-producing trees tapped for the extraction of toddy which is drunk in its raw state. The tree-tax in Ratnágiri and Kánara was reduced to remove the inducements to smuggling from Portuguese territory.

8 sadar distilleries are now in operation, and the plan is to levy fixed rates according to strength on the liquor manufactured; but the farms have been sold for three years and the farmers guarantee a minimum sum per annum. In the districts where this system is not in force the ábkári farms are sold by auction. In Thána, Kolába, Sátára and the town of Bombay both mahura and toddy spirits are consumed, while in Ratnágiri toddy spirit is used exclusively. In these districts it is necessary to fix the tree-tax in correspondence with the duty on mahura spirit.

A large reduction has been effected in recent years in the number of distilleries worked for the manufacture of spirits. Four years ago there were no less than 500 toddy stills in the town of Bombay and 4,000 in the Thána Districts. Concentration has been gradually effected, until now there are only 2 toddy distilleries in Bombay and only 14 in Thána. In Ratnágiri the number of stills has been reduced from 440 to 93, and further reductions are possible both here and in Kánara.

The special rights and privileges in respect of the ábkári revenue enjoyed by certain landholders in Sálsette under grants of the East India Company have been re-acquired on payment of compensation of about $\mathbf{1}_{70}$ lákhs, but another claim for $\mathbf{2}_{2}$ lákhs is still pending before the High Court. The revenue has already benefited by the extinction of these rights by upwards of $\frac{1}{2}$ lákh per annum. The Gáckwár has established a sadar distillery at

Drugs.

Navsári, where his territory is much intermixed with British villages, and a beginning has been made to assimilate the liquor duties in both territories. The policy of acquiring the ábkári rights of Native States on long leases has been pushed forward; the lease in Jawhár and the Sátárá Jághírs had been already acquired, and the Southern Marátha Chiefs have now resigned their rights for a yearly sum of Rs. 57,335. The Government system has been adopted in Kolhápur and negotiations are in progress to acquire the ábkári rights in Janjira and the Gujarát States and to prevent smuggling from the Nizám's territory.

The rules for regulating the manufacture and dealings in intoxicating drugs bring the trade more under control, and are calculated to afford better security to the licensed retailers against illicit sales than when the traffic was free from all interference. The action of the Nizám's Government in prohibiting the growth of the poppy in their territories has also been of material help in developing a legitimate trade. In Thana the importation and sale of mahura liquor has been prohibited; but concessions have been made in regard to dealing in toddy, the owners of less than ten trees being allowed to sell the toddy at the foot of the tree.

The total receipts as duty on liquor, including import duty, was Rs. 5,67,70,000, of which Rs. 47,83,964 was for country liquor sold in 2,540 shops. The duty on wine, beer and other formented liquors was Rs. 7,21,000 and on drugs Rs. 4,46,000, and the incidence of the whole excise revenue was 6 annas 4 pies per head. The distillery at Uran is under the Salt Department and contributed 12½ lákhs to the revenue; the spirit is consumed in Bombay, Thána and Kolába.

STAMPS.

The stamp revenue has been realised under the Indian Stamp Act, No. I. of 1879, and the Court Fees Act, No. VII. of 1870.

The following is an abstract of the receipts and disbursements under both Acts:—

		1880-81.	1881-82.	
G !	Ottomo	Rs.	Rн.	
Do.	under the Indian Stamp Act do. Court Fees Act.	19,15,686 23,02,759	18,37,86 7 23,28,235	Receipts and Disburse- ments,
Charges		42,18,445 1,96,620	41,66,102 2,03,213	
	Net Revenue	40,21,825	39,62,889	

The gross receipts show a decrease of Rs. 52,343, or a little over 1 per cent., owing to a falling off in the revenue under the Indian Stamp Act; there is an increase under the Court Fees Act.

The receipts under this head amounted to Rs. 21,502, being a decrease of Rs. 34,260, equal to 61.4 per cent. This is said to be due to the reduced sales in Bombay, where there was a large decrease of imports, the markets being overstocked with goods, and to the practice, which is believed to prevail amongst bankers

Foreign Bill Stamps, Chap. V.
REVENUE
AND
FINANCE.

and merchants, of drawing by wire. It is also partly due to the fact that several Márwári firms carrying on exchange business in the Native Town had made it a practice of obtaining the hill stamps from Agra (where this description of stamps could be purchased by merchants at a higher rate of discount); and they not only used these stamps for their own purpose, but succeeded in unlawfully introducing them by stealth into the market. Some of the ringleaders were apprehended and punished, and the practice has apparently been stopped.

IndiaRevenue and Share Transfer Stamps. Under this head there has also been a very large decrease. The receipts amounted to Rs. 1,09,306, showing a decrease of Rs. 42,338, or 27.9 per cent. The cause which has led to so large a decrease, besides that of the unauthorised sales adverted to in the preceding paragraph, is the exemption from stamp duty of receipts given by railway companies for fares for conveyance of goods and animals.

Bills of Exchange, meluding Hundis. The receipts under this head were Rs. 2,59,600, or Rs. 44,166 more than the previous year, showing an increase of 20.5 per cent. This is the largest revenue derived from this source during the last ten years. The increase occurred in almost every district, and is attributed to improvement in trade and to large shipments of wheat and grain from Karáchi. It is also reported that the offect of the notification dated 21st October 1881 has been to make the parties to a hundi more careful to state its proper currency and to affix the proper stamp.

General Stamps. The sales of other stamps realised Rs. 14,14,878, exhibiting a decrease of Rs. 34,056, or 2.3 per cent. In the town of Bombay and 6 other districts, viz, Ahmedabad, Khándesh, Kaira, Karáchi, Baroda and Káthiáwár, there has been an increase in the aggregate of Rs. 77,890, of which Rs. 55,046 were realised in the town of Bombay alone. In other districts there was a decrease of Rs. 1,11,945 in all, and the most probable supposition is that, owing to the good harvest and cheap grain, there has been less borrowing, less selling and mortgaging, and, in short, less want and more comfort and contentment generally. If these are the true causes, the falling off is a healthy sign.

Court Fees.

The sales of these stamps brought in a revenue of Rs. 23,17,483, being an increase of Rs. 18,344, or '7 per cent. Half the number of districts show an increase and the other half a decrease. The increase has been largest in Khándesh, whereas in the town of Bombay there has been the largest decrease. The increase is generally attributed to the larger number of suits filed, either because creditors stood a better chance of recovering their dues in a year of comparative plenty, or because debtors were in a position to sue for the recovery of mortgaged property or settlement of accounts. In the districts in which there is a decrease almost the same reasons are put forward. The good harvest improved the condition of the debtor, and made his relations with his creditor more amicable, and hence less suits for the recovery of money.

Other Receipts. The stamp duty realised by Collectors was Rs. 10,349 and by civil courts Rs. 589 against Rs. 25,551 and Rs. 979 respect-

Charges.

tively in 1880-81. The penalties amounted to Rs. 19,535, of which Rs. 13,508 were levied by Collectors and Rs. 6,027 by civil courts.

Adjudication fees realised a sum of Rs. 342. 72 documents were presented at the Stamp Office, and the stamp duty with which they were chargeable amounted to Rs. 22,188.

The receipts on account of court fees in pauper suits were Rs. 10,697 against Rs. 3,606 in 1880-81, showing an increase of Rs. 7,091.

The miscellaneous receipts under the Indian Stamp Act were Rs. 1.764 and under the Court Fees Act Rs. 56.

The total charges amounted to Rs. 2,03,213, showing an increase of Rs. 6,593, or 3.3 per cent., caused by the large amount of refunds allowed in the year the increase in which is remarkable, being Rs. 11,003 in excess of the previous year.

The number of licensed vendors was 1,059, being an increase of 3. Miscellaneous

The number of documents impounded was 4,733 and of those unduly stamped brought to Collectors by the public of their own motion 290. Prosecution for breach of the law was ordered in 107 cases, of which 102 resulted in conviction. The fines imposed amounted to Rs. 1,711 against Rs. 1,247 in 1880-81, and the number of persons convicted was 121.

LICENSE-TAX.

In the first year of its introduction the difference between the original assessment and the final demand was naturally more marked than in subsequent years in which the experience acquired has been utilised, and as a consequence the reductions made on appeal have been less. The working of the Act does not now present any difficulties, and as incomes less than Rs. 500 a year are not assessed, complaints have ceased, or, if made, they refer to the exemption of officials and professionals from assessment. In 1881-82 the assessment was Rs. 14,21,190, but after the disposal of appeals the amount was reduced to Rs. 12,66,460. In 1878 the final demand was Rs. 12,41,000, which was increased to Rs. 12,94,000 in the following year and to Rs. 13,07,000 in 1880-81. This indicates that the growth of the revenue from this source, which had been progressive for three years, has received a check and may be ascribed to greater leniency in the assessments and to the decrease in the profits of money-lenders which has been caused in some measure by the Dekkhan Agriculturists' Relief Act, and in a greater degree by the general agricultural prosperity making the people independent of the savkars.

It appears that on an average only one person in every 300 of the population contributes to the tax, and the effect of the abolition of the tax on the lower incomes has been to relieve eleventhirteenths of the people who used to be taxed. The incidence of the tax on the remainder who continue subject to it is now Rs. 24½ per head: it is naturally highest in the city of Bombay at Rs. 39 per head, but it appears to be unduly low in the Northern Division at Rs. 19-14-1, where wealth is more generally diffused Chap. V.
REVENUE
AND
FINANCE.

than in the Central and Southern Divisions, and yet in these divisions the incidence is higher. Nor is it credible that the proportion of persons liable to the tax in the district of Alexadabad is about double the proportion liable in the district of Surat, or that there is a much larger proportion of persons deriving large incomes from industries other than agriculture in Khándesh than in any other district.

The balances outstanding at the close of the year are generally very small, and the expenditure incurred in the collection of the tax is also very trifling, except in Bombay, where over Rs. 18,000 was spent. The average rate is only 1.6 per cent. on the amount collected. The net sum collected in 1881-82 was Rs. 12,40,892, which is obviously a small result from the only direct form of Imperial taxation in the Presidency.

LOCAL FUNDS.

Incorporated Local Funds.

> Road Fund

The receipts of the Incorporated Local Funds amount to Rs. 41,34,556 and the expenditure to Rs. 39,22,766. The receipts were better than the estimate by over 6 lakhs, and the expenditure was also more by Rs 60,000 than what was anticipated. large increase of nearly 32 lakes occurred in the item of the District Road Fund, of which over a lakh was a contribution from the Provincial Funds and nearly 1 lakh was derived from the sale of roads in the Panch Maháls to the railway company. Nearly half a lakh was received as contributions from private persons, and the remainder of the merease is due to a general improvement in most of the sources of the fund, except fisheries, under which there is a decline of Rs. 16,231. A comparison with the actuals of 1880-SI gives very much the same results. The road-cess follows the revenue and improves with it, and the increase under sand and quarries and tolls is a satisfactory indication of general prosperity, the latter especially pointing to an increase of local traffic where it has not been caused by new toll bars. The expenditure of the District Road Fund, Rs. 24,87,470, was 21 lákhs more than the actuals of the previous year, but only a little less than the estimate, the principal increase occurring under the items of road-side trees, on which nearly one lakh mere was expended, and under public works, upon which Rs. 65,000 more was spent. The items of staging bungalows and medicines also show a larger expenditure.

Educational Fund. The receipts of the Educational Fund were over a lakh more than expected, and nearly 60,000 more than the actuals of 1880-81. The income is chiefly derived from a share of the anna cess, and has increased with the increase of the revenue; but it is extremely satisfactory to notice the large increase of Rs. 22,198 under school fees and a larger contribution of Rs. 7,500 from private persons. The expenditure amounted to 13 lakhs, which is more than a lakh greater than the amount in 1880-81, but nearly \frac{1}{2} a lakh less than the amount which had been provided. The larger expenditure on head-masters and teachers, contingencies and public works accounts for the increase.

Other Funds.

The receipts and charges of the Steam Boiler Inspection Fund have been referred to under that section in a previous chapter.

It was expected that the Civil Jail Fund would have been extinguished as a separate fund and the receipts credited to Provincial Peronues, but the change was not effected during the year pending legislation on the subject, which has now been passed. The Pension Fund does not require any special notice, and the Central Book Depôt Fund has been lately transferred to Local Funds.

There are certain funds which have been created for such special and limited purposes that it is necessary to keep them distinct from the general local funds which are common to all districts, and hence they are known as Excluded Local Funds. Their combined receipts amount to Rs. 5,72,023 and their expenditure to Rs. 5,88,652, but there is nothing specially important in the fluctuations of their receipts and charges which requires to be noticed. The accounts are given in the Appendix, and the most important are the Port Funds and the Cautonment Funds. The former shows less receipts from port dues and pilotage and wharfage fees, while the receipts of the latter fund have increased owing to the revised taxes introduced into cantonments.

MUNICIPAL REVENUE.

The income and expenditure of the Bombay Municipality and of the District Municipalities have been treated in the section on municipalities under Chapter III, and further details have been given relating to the latter in the statements in the Appendix.

Excluded Local Funds.

CHAPTER VI.—VITAL STATISTICS AND MEDICAL SERVICES.

The Results of the Census.

Densities,

By the census taken on the night of the 17th February 1881, the total population of the Presidency was 16,454,414, thus made up:—

8,497,718 males. 7,956,696 females.

16,454,414

The total area is 123,860 square miles and the average numbers per square mile are 132.85. The densities range from 15.98 in Thar and Párkar to 35,145.27 in the city of Bombay; but excluding this over-crowded city and the sparsely populated Province of Sind, the general average for the other districts is 174.37 persons per square mile:—

Abstract.

Divisions.	Area in	Enum	Enumerated Population				
J/IVIBIORS.	Square Miles.	Males	Females	Persons	Persons per Square Mile.		
Northern Deccan Southern Deccan Konkan Gujarát Sind	10 158	2,161,389 1,726,656 1,821,009 1,471,834 1,316,830	2,091,384 1,721,108 1,661,314 1,385,897 1,096,993	4,252,773 3,447,764 3,482,323 2,857,731 2,413,823	172.93 256.17 281.33		
The Presidency .	123,860	8,497,718	7,956,696	16,454,414	132.85		

Note. - This table includes the military population, which is 35,660.

Births and Deaths.

Births.

The births registered in 1881 were 459,657, whilst in 1880 they were 370,878: so there was an increase for the year of 88,784. The rate per 1,000 of population was 27.93 against 22.85 last year. The proportion of males to females was 109.18 to 100; last year it was 111.22. In every 100 births there were 52.19 males and 47.81 females, and for every 100 males there were 91.59 females. The excess of births over deaths per 1,000 of population is 4.75:—

1	2.	er of Bi Boutere			PER 1,0 OPULATION		in every 100 hoen tiiere wres		For every 100 Male Births the	
	Males	Fe- males.	Persons.	Males.	Fe- males.	Persons.	Males.	» Fe- males.	Femalos Were	
Mean for 9 years. 1881	163,194 23 9,912				18 95 27·02	19·10 27·93	52·64 52·19	47·36 47·81	99-96 91-59	

Taking the statistics of each registration district separately it appears that the highest rate (4003) is for the Panch Maháls and the lowest (7.55) for the Upper Sind Frontier. In 1880 these extremes (33.10) and (8.16) were also in these districts. In Kanara, Násik, Kolába, Bombay City, Karáchi and the Upper Sind Frontier the recorded rates for this year are below those for last year. These decreased ratios may perhaps be accounted for by the increase of population as enumerated at the consus of 1881. The actual numbers registered in these districts. except Bombay City, are higher than those for 1880. In all other districts the ratios are higher. The most notable instances are 30.69 against 16.73 for Broach, 30.67 against 13.26 for Kaládgi and 29.62 against 11.92 for Sholápur.

The number of births recorded monthly from 1872 is shown in the subjoined table, and it will be seen from it that in the year under review the maximum was in July and the minimum in February :--

	Births by Months.									
Years	January	February.	March	Aprıl	Мау.	June.	July.			
Mean for 9 years	22,984	21,117	23,968	24,164	25,303	26,036	28,541

BOMBAY ADMINISTRATION REPORT.

Chap. VI.
VITAL STATISTICS AND
MEDICAL
SERVICES.

Deaths.

The number of deaths registered in 1881 was 381,450 against 328,673 in 1880, an increase of 52,777. The rate per 1,000 of population was 23.18 against 20.25 in 1880. The rate of deaths of males to the whole male population living was 23.79 and for females it was 22.53. The death-rate, as in 1880, was highest in Gujarát and lowest in Sind registration divisions.

The following table shows the number of deaths in 1881 and the ratio of deaths to population in each registration division of the Presidency:—

Divisions	Nu	ABER OF DRAT	RATIO PER 1,000 OF POPULATION			
	Males.	Fernales	Persons	Males.	Females.	Persons.
Northern Deccan Southern Deccan Konkan Gujarát Sind	56,194 40,263 40,806 47,378 17,525	49,708 36,554 36,294 42,340 14,388	105,902 76,817 77,100 89,718 31,913	26·00 23·32 22·41 32·19 13 31		24·90 22·28 22·14 31·39 13·22
Presidency	202,166	179,284	381,450	23.79	22.53	23.18

Death-rate according to Districts. The total number of deaths in each district with the ratios per 1,000 are shown in the following table, from which it will be seen that the ratios ranged from 37.91 in Broach to 6.56 in the Upper Sind Frontier. The highest actual mortality, according to the statistics furnished, is returned from Khandesh (30,661) and the lowest (815) from the Upper Sind Frontier:—

The aggregate population, according to the census of 1881, of the rural circles is 14,351,769, of the town circles 2,041,321, of the cancertainte within British territory 61,324, and of the isolated cantonments 86,549 according to the census of 1872, as the figures for the census of 1881 are not at present available. The subjoined table shows that the highest mean ratio of recorded deaths per mille exists among the urban population:—

			Total	381,450	23:18	100.	100

 $^{\circ}$ N B.—The census tables do not give the following age periods 1 and under 6, 6 and under 12 and 12 and under 20; they are, therefore, shown for the single period

It will be seen that for the Presidency the mortality amongst infants under 1 year was at the rate of 164.69 per 1,000. In 1880 it was at the rate of 94.55. The period of greatest immunity was that "above 20 and under 30" when the rate was 14.14 per 1,000. For those above 60 years of age and upwards the mortality was at the rate of 57.97 per 1,000 of those living. The percentage on total deaths amongst infants (for the Presidency) is at the rate of 19.76. For those "above 1 and under 20" the percentage on total deaths is at the rate of 29.01 for the Presidency.

Deaths by Castes or Classes.

Deaths by castes or classes are shown for Hindus, Mahomedans, Christians and "other castes or classes". By the census of 1881 the Mahomedans numbered 3,106,482 and amongst them there were 51,811 deaths against 42,647 in 1880. The deathrates per 1,000 for those years were respectively 16.68 and 15.00. There are 13,128,729 Hindus, and the total of their deaths was 323,786, making their death-rate 24.66 per 1,000. In 1880 the total was 280,550 and the rate was 21.40 per 1,000. The Christians numbered 138,326, the total of deaths was 2,168 against 2,231 in 1880, and the respective rates are 12.06 and 21.00. For all other castes or classes the deaths were 3,685 or 4803 per 1,000 of their numbers living (80,877). In 1880 their deaths numbered 3,239 and the rate was 19:11. For Mahomedans the maximum rate (37.12) was in the Broach District, and the minimum (5.19) in the Upper Sind Frontier. Amongst Hindus the maximum (38.00) was also in the Broach District, and the minimum (15.43) in Ratnágiri.

Deaths according to Seasons. The following table shows the number of deaths by months from 1872 to 1881. The ratios of the mean morfality per 1,000 of population by months for the last 9 years (1872 to 1880) are contrasted with those for 1881:

	,	COTAL DEAT	на ву Мол	THE FROM A	LL CAUSES.	
	January	February.	March.	April.	May	June

Ratio per 1,000 of population enumerated at the census of 1881	1.91	2 55	2 29		2 00	23 18

Cholera prevailed in 144 out of 285 registration circles, and the total mortality from that disease was 16,694. These deaths Mortality and were distributed over 18 districts and 1,563 units of registration. The ratio per 1,000 of cholera deaths to the population of the Presidency was 1.01. Out of the 223 rural circles, 55 town circles and 7 civil cantonment circles, 115, 25 and 4 were respectively affected. Out of 24,535 inhabited villages, 1,534 were affected.

Out of 55 town circles 25 were affected during the year. collective population of the affected towns was 1,463,689 and the deaths in them were 2,697,—that is, one death occurred out of every 543 living. In the following table there are shown 6 towns in which the death-rate exceeded 5 per 1,000. Of these 6, 2 were in the Ahmednagar Collectorate, 2 in the Sholapur Collectorate and 1 each in those of the Kolába and the Surat Collectorates. The town of Sangamner, in the Ahmednagar District, heads the list, and the death-rate per 1,000 of population recorded there was 10.57 :-

Cholera. Ratios for the Presidency generally.

> Mortality in Towns.

						LEKA	Corre-	
Number in sequence	Name of Town.		Name of District	Population by Ceusus of 1881	Number	Ratio per 1 000 of Popula- tion	sponding Number in Cholers Mup	
					-	-		
	Sangamner Bársi Surat Ahmednagar Pandharpur Mahád	,	Ahmednagar Sholápur Surat Ahmednagar Sholápur Kolába	8,796 16,126 109,814 32,798 16,910 6,804	93 151 910 221 113	10·57 9·36 8·28 6·74 0·68 6·58	51 71 181 50 72 111	

Mortality in Civil Cantonments. There are 7 civil cantonments in the Presidency, of which 4 were affected—1 each in the Nasik, Ahmednagar, Poonagand. Ahmedabad Collectorates. The collective population was 50,656, and the deaths in them were 23, which equals 1 death in every 2,202 living.

In Villages.

The affected area included 1,534 out of 24,535 villages in the Presidency. The largest number of villages affected in any district during the year was 328 out of 2,679 in the Khándesh District and 267 out of 1,331 in the Ahmednagar District. In Surat, Násik, Sátára and Sholápur they were 149, 147, 128 and 100 out of 780, 1,629, 1,340 and 709 villages respectively. In the remaining 10 districts the number of villages affected in each was below 100. The affected population, according to the census of 1881, of the area which includes these villages, was not available for this report. The table subjoined shows the number of villages affected by cholera month by month in each district, and the last column shows the percentage of the affected villages to the total villages:—

Fever.

The deaths from fever in 1881 were 272,403 against 246,779 last year, and by sexes there were 143,923 of males and 128,474 of females; this shows an increase of 25,624 deaths during the year. *In the following table these deaths are shown by districts and divisions; the 9 years' means and ratios per 1,000 of population are also given together with the deaths and their ratios for 1881:—

DRATHS FROM FRUER IN

Divis	Number	Districts		Mean Deaths from Fover	Mean Ratio por 1,000 Population on Census of 1872	1881.	Ratio per 1,000 of Populatio on Census of 1881

Mean for 8 years.

From the above table it will be seen that in the Northern Deccan, Gujarát and Sind Divisions there is an increase of 32,257 deaths over those of last year, whilst there is a decrease of 6,633 in the Konkan and the Southern Deccan Divisions. For the

Presidency the total increase for the year is 25,624. With the exception of the Belgaum, Dhárwár, Kaládgi and Ratnágiri tricts and Bombay City there is an increase, more or less, in district over that of last year. The highest ratio of mortality during the year was 33·14 in Broach, and the lowest was 5·37 on the Upper Sind Frontier. By divisions the maximum mortality (25·62) was in Gujarát and the minimum (11·42) in Sind.

The next table shows the mortality by the conventional seasons for each year from 1872 to 1881 inclusive, and the totals for the year under report are so placed as to contrast with the means of the preceding 9 years. It will be seen that the numbers for 1881 for each season exceed the mean for 9 years; and for each month except February and March, and for each season except the cold, they are higher than the numbers for last year:—

Abstract.

Seasons.	1872.	1878	1874	1875. 1876	1877.	1678.	1879.	1880.	Mean.	1881.
Cold Hot and Dry Rainy Hot and Damp	66,032 80,369 69,078 41,268	67,472 27,601 56,560 36,568	64,590 27,245 55,381 36,501	68,801 75,872 84,260 31,083 75,465 72,036 39,630 89,840	48,566, 121,309	50,201	39,772 85,100	93,800 38,188 73,746 40,745	82,090 36,620 81,757 49,071	93,438 40,204 87,466 50,795
Total	206,747	188,201	183,717	219,156 220,833	3 336,865	357,376	286,526	246,779	249,578	272,408

The general increase in the number of deaths under each head, except cholera, small-pox and injuries, is probably due to improved registration.

Bowel Complaints.

The deaths from bowel complaints during the year under report are 30,842 against 24,452 last year, showing therefore an increase of 5,890. By sexes there were 16,842 of males and 13,500 of females. In the following table are shown for each district the deaths for each year since 1872, the means and ratios per 1,000 of population for 9 years, and the deaths and their ratios for 1881:—

DEATHS FROM BOWEL COMPLAINTS IN

Divi	Number	Districts.	1880.	Mean for 9 years from 1872 to 1880.	Ratio per 1,000 of Population on Census of 1872.	1881.	Ratio per 1,000 of Population on ('ensus of 1881.

'Mean to: 8 years

From the above table it will be seen that, except in the Sind Division, there is an increase in the number of deaths from bowel complaints during the year under report, but compared with the mean there is a decrease for the Presidency of 3,710, and when compared with the number of the previous year there is an increase in each district except in Kánara, Kolába, Panch Maháls, Hyderabad and Thar and Párkar. The highest ratio 3.68 per 1,000 during the year is in Khándesh, and the lowest 0.03 is in Thar and Parkar.

The next table shows the deaths by seasons from 1872 to 1881 inclusive, and the mean for the last 9 years is so placed as to contrast with the totals of 1881. It will be found that in all the months and seasons the number of deaths exceed those for last year, and when compared with the mean there is a decrease in each month (except in December). The four seasons contrast favourably with the mean —

Abstract.

Shasons	1872	1873.	1574	1875	1876	1877	1878 ,	1879	1880 Means	1881
Cold Hot and Dry Rainy Hot and Damp	8,579 4 380 15,134 5,568	7,814 3,926 9,705 4,814	7,900 3,871 10 f 27 4,6 J2	9,032 4 846 14,268 5,004	9,581 5,17 13 641 5,836	11 675 7 728 29 6 1 11 198	9,685 5 103 19 42) 6,948	8,3 6 3,645 9,696 4,602	8,024 8 955 3,568 4,694 5,8 3 14 543 4,027 5,860	8,606 4,30 4 11 783 5,649
Total	98,661	26,259	26,930	3,600	33 05 1 ₁	60,2,7	41 16	215 8 10	21,402 34,052	0,842

There were 5,950 deaths from injuries, and by sexes they were 3,424 of males and 2,526 of females, their ratio per 1,000 of population was 0.36. For 1880 the total was 6,082, the ratio being 0.37. This shows a decrease in the total of 132, and in the ratio

Injuries.

of 0.01. Of the 5,950 deaths there were 2,636 by drowning, 1,209 by snake-bites, 382 from wounds, 217 by hanging, 120 attacks by wild beasts, 113 by poisoning and 3,273 from ca other than those specified. They are shown by sexes in the subjoined table:-

			1881.		1890			
		Mules.	Females.	Total.	Males,	Fomales.	Total.	
Drowning Poisoning . Hanging Wounding Wild beasts Snake-bites Other causes		 1,213 75 134 267 90 788 857	1,423 38 83 115 30 421 416	2,636 113 217 382 120 1,209 1,273	1,288 64 161 273 103 759 854	1,581 30 77 86 40 420 346	2,869 94 238 359 143 1,179 1,200	
	Total	 3,424	2,526	5,950	3,502	2,580	6,082	

It will be seen from the above table that on the whole there is a decrease, but there is an increase of 30 deaths under snake-bites, of 23 under wounding, of 19 under poisoning, and of 73 under other causes. The large decrease of 233 is under drowning, and of 21 and 23 under hanging and wild beasts.

SERVICES.

Emigration

There is nothing to record under this head.

Medical Relief.

The schools at Poona and Ahmedabad have made and continue to make very satisfactory progress, and that started at Hydorabad in July 1881 has begun its career under most favourable auspices. The latter school meets a great want, and will in time materially lessen the difficulty at present experienced by the Medical Department in supplying the Province of Sind with properly qualified subordinates. The school at Poona was called upon a second time to reliove a sudden strain on the Subordinate Medical Department, and 15 students were found qualified to enter the service. The question of the establishment of a medical school at Kolhápur, in the Southern Marátha Country, is under consideration.

Poons and Ahmedabad Medical Schools.

The hospital and dispensary buildings generally are reported in an efficient state of repair, and the conservancy has been carefully attended to. No case has come to notice which would suggest an unhygienic state of hospital wards and buildings. The accommodation is said to be sufficient, but the surgeon of the Gokaldas Tejpal Hospital again brings to notice the want of a separate building in which out-door patients could be received.

Hospitals.

Of first class civil hospitals there are 6 against 5 in the previous year, of the second class 10-being the same number as in the preceding year, and of the third class 25 against 28. total number is now 41 as compared with 43 in the previous year. The reduction in the number is due to the removal of a civil surgeon from Gogha and the change of the designation of the hospital at Alíbág. The two institutions at Gogha and Alíbág are now termed dispensaries. In the Konkan there is a decrease of one in the third class; in the Deccan a second class hospital has become a first class one; in Gujarát one third class has become second class, and one has been converted into a dispensary. In Sind and among foreign hospitals there has been no change of class.

Of dispensaries there are 25 first class, 60 second class and 61 Dispensaries. third class, against 25, 55 and 64 respectively in the previous year: the total is, therefore, 146 against 144. In the Konkan there is an increase of one in the number of dispensaries, namely, Alibag. In the Deccan the number is the same as last year, but

there is an increase of one in the first class and a decrease in the third class. In Gujarátothere has been an increase of 3 in the second class, namely Gogha, and 2 formerly in the last class, but now brought down to the second class. In Sind there has been an increase of 2 in the first class and a corresponding decrease in the third class. The foreign dispensaries are unchanged. During the year, besides the changes in designation of the institutions at Alíbág and Gogha, the dispensary at Kashmor in Sind has been re-opened, but the dispensary at Tháno Bula Khán was closed at the end of the year.

In-door and out-door Patients.

The total number of patients treated at the various institutions in the Presidency, both in-door and out-door, was 1,275,494 as compared with 1,235,455 in the year 1880. The number of indoor patients was 35,679 against 35,059, and of out-door patients 1,239,815 against 1,200,396. There has thus been a small increase of 620 in-door patients; the numbers have, however, differed somewhat in the various provinces: thus there is an increase of 742 patients in the Konkan, a decrease of 471 in the Deccan, an increase of 282 in Gujarát, an increase of only 25 in Sind, and an increase of 42 in foreign institutions. Of the total in-door patients 27,073 were cured, 1,063 were relieved, 2,694 were discharged otherwise, and 2,913 died; the percentage of deaths to total treated was 8.1 against 7.4 in the previous year. ber of beds available was 3,122 against 3,056, and the daily average number under treatment was 1,797.9 against 1,883 in the previous year. According to sex the daily average was 1,420.3 men, 261.8 women and 115.8 children as compared with 1,459.4, 2015 and 1291 respectively in 1080. The total number of outpatients treated at civil hospitals was 297,392 and at disponsarios 942,423, making a grand total of 1,239,815, an increase of 39,419 over the total of the previous year. The increase was in the Konkan 13,858, in Gujarát 13,369, in the Deccan 6,415, and in Sind 7,245; there was a decrease of 1,468 in the foreign institutions. The daily average attendance at civil hospitals was 2,981.1, at dispensaries 10,080.9, or a total daily average attendance of 13,062 as compared with 12,930.9 in the previous vear.

Malarious Fevers. Again, as is always the case, malarious fevers caused the largest number of patients admitted for treatment. The total admitted for these fevers was 267,420, or 20.9 per cent. of the total treated for all diseases. The ratio per cent. in the various provinces was in the Konkan 25.6, in the Deccan 16.6, in Gujarát 19, in Sind 28.2 and in foreign hospitals 18.9, showing as compared with last year an increase in the Konkan, Gujarát and foreign institutions, and a decrease in the Deccan and Sind.

Cholera.

During the year cholera prevailed in many parts of the Presidency; in the Konkan there were 356 cases, 2,481 in the Deccan, 1,089 in Gujarát, 1 in Sind, and 30 in foreign institutions. These cases, in all 3,957, or 0.31 per cent. of the total admissions from all causes, are only those that were treated in the various hospitals and dispensaries, and cannot be taken as showing the extent of the disease.

Small-pox.

Venereal Diseases.

There are few admissions record d for this disease, only 100 gipst 115 in the previous year. (f these, 41 occurred in Bombay, and of the remainder 43 are re irned from Sind.

The admissions for syphilis alone numbered 21,132, showing a decrease of 2,179 as compared with the previous year. decrease has been distributed fairly over the whole Presidency, except in Gujarát, where it only amounts to 161; in the Konkan it is 657, in the Deccan 750, in Sind 629: there is a slight increase of 18 cases reported from foreign institutions. It is worthy of remark that admissions for this disease in the island of Bombay, which is included in the Konkan, show a reduction of 717. Taken together with generrhea, the total admissions were 34,039, or 2.6 per cent. of the total treated. According to provinces the percentage to admissions was in the Konkan 2.8, in the Deccan 2.1, in Gujarát 2.6, in Sind 35 and in foreign institutions 2.4. The percentage for the island of Bombay, though still higher than in any other division of the Presidency, shows a large reduction, being only 4.1 as compared with 7.9 in the year 1880.

Admissions for various forms of rheumatism numbered 41,315, being 3.2 per cent. of the total treated.

For diseases of the lungs 73,989 patients sought relief, being in the proportion of 5.8 per cent. of the total treated.

There has been an absolute increase in the number of patients Diarrhoss and treated for these complaints, but relatively to the total treated there has been little increase. Dysentery gave 1.5 and diarrhoea 24 per cent., against 1.5 and 2.2 respectively in the previous year, the Konkan again showing the greatest number, namely, 1.7 and 3.6.

From this form of disease 85,081 patients suffered, giving a ratio per cent. of 6.6 on the total treated. The disease was most prevalent in the Konkan and the Deccan, but was comparatively rare in Sind.

Skin diseases gave 153,795 admissions, being 12 per cent. of Skin Diseases. the total treated. They are most common in Gujarát, the Deccan and the Konkan.

For diseases of the eye 101,5#3 patients were treated, and for Disease of the diseases of the ear 37,780, giving a ratio per cent. to all cases Eye and Ear. of 7.9 and 2.9 respectively.

There was a slight decrease in the number of major operations owing to circumcision being now classed as a minor operation. Including 132 remaining from the previous year there were 3,617 cases of operation under treatment against 3,679 in 1880. Of these 2,288 were performed at civil hospitals and 1,329 at dispensaries; 1,121, including 1,068 in Bombay City, were performed in the Konkan, 392 in the Deccan, 353 in Gujarát, 375 in Sind, and 47 in foreign hospitals. Of these operations 963 were performed upon the eye and its appendages, the greater number, 832, being recorded from the Cowasji Jihangir Ophthalmic Hospital. Of operations on joints, chiefly reduction of dislocation, and including 89 of the shoulder, 66 of the elbow, 48 of the jaw, 23 of the wrist and 18 of the hip, there were 295 perRheumatic Affections.

Respiratory Affections.

Dysontery

Intestinal Parasitos.

Surgical Operations, major.

formed. There were 283 imputations including. 2 cases in which two limbs were amputated at the same time; besides the most important were 7 in the shoulder coint with 1 death, 21 of the arm with 2 deaths, 31 of the forearm and 3 deaths, 15 of the thigh with 6 deaths, 61 of the leg with 13 deaths and 15 of the foot with 3 deaths. For relief of stone in the urinary passages, 550 patients were under treatment; they included 484 cases of lithotomy with 41 deaths, or a mortality of 8.4 per cent., and lithotrity 23 cases with one death. Cassarian section was performed once and ovariotomy twice, with death in each case.

Minor Operations. 67,650 minor surgical operations were performed, exhibiting an increase of 4,870 as compared with the previous year. In Gujarát 21,481 were performed, in the Konkan 14,850, in Sind 14,738, in the Deccan 15,102, and in foreign institutions 1,479.

Sex and ('aste &c. of treated

The details of the attendance of patients at the various institutions are as follows:—Of the total treated 621,166 were men, 236,418 were women, and 417,910 were children, being in the proportion of 52.5, 19.6 and 27.9 per cent. respectively as compared with 53.4, 20.1 and 26.5 in 1880, showing a continued increase in the attendance of children. The proportionate attendance of males in the different provinces is in the foreign institutions 629, in Sind 61.3, in the Konkan 531, in Gujarát 50.7, and in the Deccan 487. Of women in the Konkan 21.3, in Gujarát 20.8, in foreign institutions 19.9, in the Deccan 18.7, and in Sind 16.4. Of children in the Deccan 32.6, in Gujarát 28.5, in the Konkan 25.6, in Sind 22.3, and in foreign institutions 17.2. As regards caste 669, per cent. of the total treated were Hindus, 25.8 were Mussalmans, 3.3 Native Christians, 2.4 Parsis, 0.5 Europeans, 0.3 Eurasians, and 0.8 other castes; in 1880 the proportions were 66.4 Hindus, 25.9 Mussalmáns, 3.3 Native Christians, 2.8 Pársis, 0.5 Europeans, 0.3 Eurasians and 018 other classes.

Income and Expenditure

The total income was Rs. 10,28,927-10-1; deducting from this the cash balance in hand at the beginning of the year, the net income was Rs, 9,33,965-8-0 against Rs 9,37,817-0-2 in the This difference is due to the diminution in the previous year. amounts received from local and other tunds. The sums contributed by Government amounted to Rs. 7,34,783-15-1 against Rs. 7,36,010-5-1, and those from local and municipal funds and miscellaneous receipts to Rs. 1,82,251-0-2 against Rs. 1,88,598-13-4. The interest on invested capital amounted to Rs 14,126-7-6 10,686-8-9; subscription from Europeans to agamet Rs. Rs. 1,049 and from Natives to Rs. 1,755-1-3 as compared with Rs. 1,006-0-0 and Rs 1,484-11-0 respectively. The total expenditure, after deducting sums remitted to the treasury on account of paying patients, &c., and the amount invested during the year, is Rs. 5,99,312-11-8 against Rs. 8,90,127-10-4. There is a reduction of expenditure under the heads of bazar medicines and diets and an increase under establishment, European medicines, and buildings and repairs. The average cost of each patient was Re. 0-12-6 against Re. 0-12-7 in the previous year. The cost of each patient according to divisions

SERVICES

was:—Kenkan Rs. 1-7-3, Deccan Re. 0-9-2, Gujarat Re. 0-8-4, and Re. 0-8-7 and foreign Rs. 2-3-9. The proportion of de total cost paid by Government amounts to 81 7 per cent. against 82.7 in the previous yes It may here be pointed out that it has not been the custom, in calculating the proportion of the cost paid by Government, to include the cost of institutions entirely supported by Native States Were these considered, the percentage of cost to Government would in the year under review be reduced to 756 of the total expenditure on medical relief in the Presidency. The average cost of each diet was Re. 0-2-5 against Re 0-2-7 in the previous year.

The account of invested capital during the year shows that on 1st January 1881 there was a balance of Rs 2,72,000, and Rs 5,500 were invested during the year, making a total of Rs. 2,77,500.

Exclusive of the large hospitals at the Presidency town, 23 civil hospitals scattered throughout the Mofussil were visited, and the work of each medical officer in charge carefully examined, by the Surgeon General.

Since the last report two lying-in wards, capable of accommodating 2 European and 6 Native patients, have been added to the Sassoon Hospital at Poona, and an European matron on a monthly salary of Rs 10 sanctioned for the charge The maternity when completed will be advantageous to the middle and poorer classes of females.

The building used as a civil hospital at Ahmednagar is situated Ahmednagar in a thickly inhabited portion of the town, and wholly unsuited to the requirements of so large a station. A properly constructed hospital on a selected site is urgently needed.

The civil hospital at Venguila, being still located in the old The Venguila military camp, is, from its inconvenient distance (3 miles) from the town, rendered almost valueless to the inhabitants. A proposal to abandon the present building and convert the existing travellers' bungalow into a suitable dispensary (erecting a new rosthouse nearer the point of landing) was submitted for the favourable consideration of Government.

The newly constructed hospital at Dhárwar will soon be fit for occupation, but the transfer of the lunatic asylum from that station to Belgaum has as yet, owing to the impossibility of obtaining suitable accommodation for the insanes, been deferred. The station of Belgaum has been made a charge of a civil surgeon of the first class since November 1881.

At Kolhápur a large hospital is now being completed, and in connection therewith it has been recommended that a medical school, superintended by a commissioned officer, should be opened so as to afford the opportunity for giving medical instruction in the Southern Marátha Country.

The means at the Principal's disposal in the Jamsetji Jijibhai Hospital being in all respects complete, the system of instruction may be regarded as excellent It may with confidence be affirmed, that no sounder medical education than that procurable at the Surgeon General.

The Sassoon Hospital.

Hospital.

Dhárwár

Belgaum.

Kolhápur.

Jamsetji Jinbhai Hospital.

Jamsetji Jijibhai Hospital is obtainable in any institution in India.

Since the date of last report a third physician, to whom the chair of pathology is entrusted, has been added to the strength of the medical staff. It is anticipated that much practical benefit to the students will accrue from this appointment.

Under Government Resolution No. 274, dated 27th January 1882, the system of enlisting the services of unpaid, instead of paid, assistant surgeons, was directed to be tried, the experiment commencing in the Gokaldas Tejpal Hospital. The Surgeon General writes:—

The Gokaldas Tejpal Hospital. "No efforts shall be wanting in this department in endeavouring to give effect, in the fullest sense of the term, to the wishes of Government in this matter, it being considered that if members of the medical profession can be induced to give their gratutous services to hospitals 'in consideration of the experience and reputation gained thereby', a great public benefit would be achieved. The progress of the measure will be watched with extreme interest, and the result, after six months' trial, reported to Government."

LUNATIC ASYLUMS.

Asylums.

Lunatic asylums are situated at Colába (Bombay), Poona, Dhárwár, Ahmedabad and Hyderabad (Sind). The numbers confined both at Colába and Dhárwár exceeded the accommodation provided. At Ahmedabad the maximum number was reached and admissions had to be refused. At Poona and Hyderabad the accommodation was sufficient. There was some overcrowding only at Colába, where the number confined at one time reached 342.

Inmates.

The total inmates numbered 903 against 913 in 1880; of this number 752 were males and 151 females. There were 226 males and 26 females admitted, making a total of 252. Only 5 were re-admitted. The number discharged was 223: of these 67 were cured, 154 were transferred to friends (149 improved and 5 unimproved), and 2 were discharged otherwise.

Deaths.

The deaths numbered 53, or 16 in excess of the number in the previous year. 26.1 of the persons admitted were cured and 20.6 died.

Admissions and Discharges. On the 31st December 1880, 90 criminal lunatics remained, 19 males and 1 female were admitted, making the total treated 110, an increase of 5 on the number treated in the previous year. Of these 3 were discharged to undergo their trial, 8 were declared cured, 1 was given over to the care of friends, and 9 died, leaving at the end of the year 84 males and 5 females, total 89. As to the nature of the crimes of these insanes, 48 males and 4 females were confined for murder, 26 for theft, 4 for attempted suicide, 10 for causing grievous hurt, 3 for housebreaking, 7 for mischief and 8 for other crimes.

Admission by Castes. Of the total number of lunatics admitted, 97 were Europeans, 1 Eurasian, 8 Native Christians, 91 Hindus, 52 Mahomedans, and 8 Pársis. Patients are admitted from all parts of this Presidency, the Europeans being chiefly soldiers from different stations in

India. Classing the admissions by occupations, 84 were European soldiers, 50 beggars and fakirs, 42 servants and labourers, 16 clerks, 11 cultivators and 6 unknown. No less than 196 were between the ages of 20 and 40.

Causes of Insanity.

The cause of insanity is given in 416 cases out of 903, and of these 350 are ascribed to physical and 66 to moral causes. Of the former the use of spirits or intoxicating drugs accounts for 178, namely ganja 130, spirits 41 and opium 7. Fever is given as the cause in 32 cases, hereditary in 22, opilepsy 28, previous attack 24, destitution 14, onanism 7, and climate 11; of moral causes, in 45 cases grief is the alleged cause, study in 2, religion in 12, and fear 4.

Receipts and Expenditure,

The total receipts amounted to Rs. 1,07,695; of this Rs. 96,290 were drawn from the treasury, Rs. 9,722 were received from paying patients, and Rs. 1,682 were the value of articles from the manufacture department used for a ylum purposes. Deducting the receipts from paying patients the net cost to Government was Rs. 86,568 against Rs. 91,404 in 1880, and per head it was Rs. 136-13-2 against Rs. 150-2-2. The decrease occurred in all the asylums except Dhárwár, where it is again much in excess of any other asylum, but the account is swelled by special charges expended by the Public Works Department.

The total cost of establishment was Rs. 3,697 a month.

The average number of patients employed in manufactures was 316, or about one-fourth of the whole number confined. The credits were Rs. 5,140 and the debits Rs. 2,194, or a profit of Rs. 2,945 against Rs. 1,328 in 1880.

Sanitation.

Sanitary Works-Military.

The annual cantonment reports of the executive engineers in charge of military stations show the actual outlay on sanitary works (military) during the year 1881 to be Rs. 4,22,109. Of this sum Rs. 2,43,103 were spent at Nasirabad, of which Rs. 2,43,061 were spent on water-supply. At Aden Rs. 39,952 were expended, of which Rs. 7,701 were for constructing a guard-room at the West Gate, Isthmus Position. Rs. 11,014 were for constructing lines for a company of Sappers and Miners at Steamer Point. Rs. 8,160 were for constructing quarters for the engineer in charge Seera Condenser. At Ahmedabad Rs. 25,230 were spent, of which Rs. 13,977 were for a new bakery, and Rs. 4,169 for a new church for Protestants. At Kolába Rs. 25,008 were expended, of which Rs. 8,242 were for constructing an armourer's shop, Rs. 5,919 for covering the gymnasium at Morley Hall, and Rs. 3,425 for making additions to the surgery and dispensary of the Station Hospital. At Baroda Rs. 22,112 were spent, of which Rs. 4,803 were for improving accommodation and ventilation in canteens, and Rs. 14,759 for constructing a bakery for European troops. At Mhow Rs. 21,647 were expended, of which Rs. 9,889 were for constructing elephant sheds. At Purandhar Rs. 11,879 were spent, of which Rs. 4,470 were for a guard-room, and Rs. 7,169 for a new roof to the Sanitarium Hospital. At Neemuch Rs. 11.174 were expended, of which Rs. 10,060 were for improving the drainage of the Sadar Bázár.

Municipalities.

The total amount expended on conservancy by the various municipalities is Rs. 6,33,713. The amount expended by each municipality and the details of the sanitary condition of the municipal towns in this Presidency are given by the Sanitary Commissioner in his annual report for the year 1881. Many of these municipalities have an abundant supply of good water; the notable exceptions are Broach, Surat, Ahmednagar, Nandurbár, Taloda, Násik, Talogaon, Lonávla, Vita, Wái and Dhárwar. At Karáchi a temporary scheme for supplying drinking water was carried out during the year 1880-81 at a cost of Rs. 4,068. Most of the municipal towns have open side drains of masonry in the principal streets: the exceptions are Dholka, Dhandhuka, Modása and Gogha, towns in the Ahmedabad District; Mehmadabad and Kapadvanj in the Kaira District; Kúrla in the Thána District: Trimbak, Sinnar and Igatpuri, towns in the Nasik District; Yamkanmardi and Nipáni, towns in the Belgaum District; Vengurla and Dápoli, towns in the Ratnágiri District; Byádgi and Guddguddápur, towns in the Dhárwar District. Sátara has no side drains: the physical features of the city facilitate natural drainage. Hyderabad City is drained entirely by surface drainage. The following 8 towns-Kaira, Ahmednagar, Sangamner, Násik,

Poona, Talegaon, Sholapur and Sukkur-have under-ground sewers, more or less complete, but of faulty construction. Most of the municipalities have public latrings which are kept clean at the expense of the municipal funds. The exceptions, 66 in number, are mostly small places, but among them are the towns of Godhra. Dohad, Jambusar, Broach and Ratnágiri. In the municipal town of Mahad there are a few public latrines which are not used, as there are no sweepers employed to clean them. A number of the municipalities employ their establishment to clean the private privies of the townspeople; but the practice varies in different districts, and some of the best-managed municipalities-such as Kaira, Kaládgi, Karáchi, Hyderabad and Jacobabad-prefer to allow the owners of private privies to make their own arrangements for cleaning them, making their owners responsible if the work is not properly done. 20 municipalities have urinals within the town in addition to the latrines. Sweepers are employed by almost all the municipalities for cleaning the streets: the exceptions are Lonávla in the Poona District; Ratnágiri; Anklesvar in the Broach District; Jacobabad; and Gogha in the Ahmedabad District. In the last three towns the work is done by contract. Pondrette is prepared and sold as manure at the following towns:-Ahmedabad City, Surat City, Pen, Ahmednagar, Násik, Poona, Sátára, Wái, Sholápur, Pandharpur, Belgaum and Sukkur. Ahmedabad Rs. 7,097 were spent on new works and Rs. 19,655 on repairs. Of the former Rs. 1,269 were expended on wells. At Dholka public latrines were erected at a cost of Rs. 635. At Dhandhuka Rs. 817 were spent on wells and tanks. At Mándvi, in the Surat District, Rs. 256 were expended on a latrine, and Rs. 470 on two wells. At Thana 27 acres and 15 gunthas of marshy ground have been reclaimed. At Alibág, in the Kolába District, 15 dust-bins were constructed at a cost of Rs. 300, and some ground was specially prepared for the manufacture of pondrette. At Ahmednagar Rs. 7,148 were spent on drains, roads, and water-pillars, &c. At Erandol, in the Khandesh District, new drains were constructed at a cost of Rs. 475; on temporary wells Rs. 39 were spent, on conservancy carts Rs. 493, and on new dustbins Rs. 175. At Poona City new roads were made and old ones improved at a cost of Rs. 15,488. On water-supply, new works, such as pipes, settling beds, filters and new cisterns, Rs. 7,457 were expended. On new drains and sewers Rs. 3,653; on urinals, Rs. 383; on new latrines, Rs. 3,534; on new lights in streets, Rs. 1,211, and on dust-bins, Rs. 1,021. At Sátára Rs. 1,214 were spent for water-supply. At Sholapur the construction of reservoirs and erection of special steam pumps for raising water have been completed. At Vengurla Rs. 2,523 were expended on the improvement of the head water-works. At Rájápur Rs. 1,882 were spent on the improvement of the water-works channel. At Ratnágiri Rs. 15,131 were spent on the completion and repairs of the existing water-supply works. At Chiplun Rs. 8,636 were spent on repairs to the head water-works. At Kambar, in Shikarpur District, Rs. 482 were spent on wells and tanks. Besides the above, a number of minor sanitary works were under construction in the various municipalities.

Local Funds.
Sanitary
Inspection.

The expenditure from local funds on sanitation is for the most part confined to the improvements in water-supply.

The following places were inspected by the Sanitary Commissioner:—Sukkur, Sibi, Karáchi, Poona, Násik, Thána, Ahmednagar, Sholápur, Nasirabad, Tárághar, Ahmedabad, Surat, Ron, Shikárpur, Jacobabad and Hyderabad: an account of the watersupply of some of the above places will be found in his report for the year 1881.

Water Analysis. The travelling water analyst of the Sanitary Department examined 247 samples of water: of these 117 were found to be fair, 86 bad and only 44 good.

Vaccination.

The strength of the department was-

- 5 Deputy Sanitary Commissioners.
- 3 Superintendents of Vaccination.
- 31 Inspectors of Sanitation and Vaccination.
 - 5 Assistant Superintendents of Vaccination.
- 28 clerks and kårkúns.
- 432 vaccinators.
- 481 peons.

There were 729,323 persons primarily vaccinated and 56,769 re-vaccinated, against 642,505 and 62,479 in 1880-81, showing a net increase of 86,818 or 13:31 per cont. under primary vaccinations and a net decrease of 5,710 or 9:14 per cont. under re-vaccinations. There was a considerable decrease (5,726 persons) under re-vaccinations amongst Native and European troops, the figures being 54,274 against 60,000 in the preceding year. On the whole, there has been an increase of 81,108, or 11:50 per cent.

The following table shows the number of persons primarily vaccinated, as also the increase or decrease for each of the last ten years:—

Primary Vaccinations.

Primarily			,	RAR9 LN	DED 3181	MARCH				
vaccinated,	1873	1571	187		1877.	1878	1970		1881	1882.
Persons	527,153 570,025									
Increase	12,872	.5,793	45,999	18,822	41,545	(Dect 62,129	CRRC) 108,086	21,532	56,004	86,818

The following table shows for the last two years the number of surviving newly-born children successfully vaccinated in Bombay, exclusive of Native States. The birth and death statistics are taken for the calendar year in calculating the number available for vaccination, because infants are generally not vaccinated until three months after birth:—

Number of surviving newly-born children successfully vaccinated.

Years		CHILDREN bucces	VACCINATED SELLLY	Children available for	Births	Deaths registered	
			Those under 1 year	Those under he wen I		having be n registared	among Children under 1 year,

1881-82			282,480	145,210	381,286	459,657	75,371

Chap. VI.
VITAL STATISTICS AND
MEDICAL
SERVICES

Results in Primary Vaccinations. Out of 729,923 persons primarily vaccinated, 703,923 cases were successful, or 96 52, the highest percentage over attained, against 95.95 in 1830-81, 95.11 in 1879-80 and 94.5% in 1878-79: thus showing that there was an improvement in the quality and the quantity of the work performed during the year. The number of unsuccessful cases also compares favourably with those of the previous years, being 14,061 against 14,721, 15,178 and 19,425. Secondary operations after the failure of the first were performed on 2,701 persons, and 14,040 persons escaped observation.

Results in Re-vaccination. During the year, 56,769 persons were re-vaccinated against 62,479 for 1880-81. In 162 instances the re-vaccinations were repeated; in 6,091 instances the results could not be ascertained; and in 10,165 the re-vaccinations failed. The number of successful cases was 40,675, or 71.65 per cent. against 72.79 in the preceding year.

Results in total operations. The total number of persons operated on was 786,092, of whom 94.72 per cent. were successfully vaccinated. In 1880-81 the percentage was 93.90. 2,863 persons were operated on more than once. In 24,226 cases the results were unsuccessful, and in 20,131 cases they could not be ascertained.

Primary
Vaccinations.
Increase and
Decrease by
Districts and
Circles.

In primary vaccurations an increase of 87,193, or 13:57 per cent., occurred in all the districts and circles except Aden and the British Army. They may be arranged in the following order according to the rate of increase:—The Western Gujarát, Presidency Circle, Baroda, Eastern Gujarát, Southern Deccan, Native Army, Northern Deccan, Cutch, Konkan and Sind, where the rate is only 2:34 per 100

The decrease in Aden and other foreign settlements is owing to only 6 persons having been operated on against 124 last year in Basadore, 140 against 237 in Zanzibár, and 133 against 327 in Muscat.

Re-vaccunations. Increase and Decrease by Districts and Circles.

In re-vaccinations the increase is distributed over Southern Decean, Konkan, Presidency Circle and Baroda; but the decrease (6,845) in the other districts is more than the increase, so that the net decrease is 5,710. The rate of increase for Southern Decean is high, being 13:12 per cent. Next in order are the Konkan, Presidency Circle and Baroda, where the rate is 2:17 per 100. The decrease in other districts is 10:96, or 9:14 per cent. more than the rate of increase. These districts stand in the following sequence:—The British Army, Cutch, Aden, Eastern Gujarát, Northern Decean, Native Army, Western Gujarát and Sind, which gives the rate as 2:61 per cent.

Total operations. Increase and Decrease by Districts and Circles.

Percentage of success reviewed by Districts and Circles.

In the total operations a decrease of 2,614 is to be observed in Aden and among British and Native troops, whilst an increase of 83,722 is distributed over all the other districts and circles. The net increase is 8,108, or 11.50 per cent.

The following table shows by districts and circles the percentages of success in primary vaccinations and re-vaccinations contrasted with those for the previous year:—

No.	Districts and Circles.	Porcentages of Success in Primary Vaccunations.			s of Success cinations	
		1880-81	1881-82.	1880 81.	1881-82	
1 2 3 4 5 6 7 8 9 10 11 12 13	Cutch Circle Konkan Registration District Northern Deccan Registration District Eastern Gujarát Registration District Baroda Circle Southern Deccan Registration District, Sind Registration District Dispensaries Presidency Circle Western Gujarát Circle Native Army British Army Aden	97:11 97:44 98:31 96:80 96:12 96:54 96:12 92:42 91:54 91:54 91:82 83:94 92:56	98 76 98 65 98 37 97 08 96 95 96 83 96 59 93 36 93 36 93 32 83 00 76 01 74 63	76·64 72·91 71·89 47·67 70·31 81·01 75·79 77·21 72·65 64·05 68·66 51·30 59·18	89·53 63·99 65·61 48·57 76·60 77·07 73·81 68·54 96·52 68·58 60·67 56·61 29·41	
	Average for the whole Presidency	95.95	96 52	72 79	71 65	

In the "successful" primary vaccinations the percentages are lower than last year in the British and Native Army owing to there being more "unsuccessful" and "unknown" cases.

Protection per mille of Population.

The ratio to the whole population of protection by successful operation is higher than last year in all the districts and circles. It is lowest in the Southern Deccan and the Presidency Circle. In British and Native territory it is respectively 27.00 and 28.53 against 24.80 and 24.22 per mille of population in the provious year. On the whole, 27.54 persons of all ages per every 1,000 of population against 24.60 last year and 22.26 in 1879-80 were primarily vaccinated successfully.

In primary vaccinations the percentages are higher than in the preceding year in all establishments except the British and Native Army. The highest percentage is 100 in cantonment and the lowest is 76.04 in the British Army. The next highest is 98.81 in Government and the next lowest is 83.00 in the Native Army. In re-vaccinations the lowest percentage is 56.61 in the British Army and the highest is 95.83 under Government.

There were 375,896 males and 353,427 females primarily vaccinated. The re-vaccinated were respectively 30,989 and 25,780, and the totals of persons operated on were 406,885 males and 379,207 females. In primary vaccinations, according to sex, the percentages are respectively 51.54 and 48.46 against 51.83 and 48.17 last year; in re-vaccinations they are 54.59 and 45.41 against 57.42 and 42.58; and in total operations they are 51.77 and 48.23 against 52.32 and 47.68. These ratios show that this year more females were primarily vaccinated as well as re-vaccinated.

Of the total number primarily vaccinated, 4,328 were Christians, 554,826 Hindus, 120,091 Mussalmáns, 2,024 Pársis and 47,994 persons of other castes; and in all classes the numbers are higher than last year, the respective percentages being 0.59, 76.07, 16.47, 0.29 and 6.58; the percentages for Christians, Mussalmáns and Pársis are, however, lower by only 0.05, 0.60 and 0.01.

Sex.

Race,

Chap. VI. VITAL STA-TIBTICS AND MEDICAL SERVICES.

Age.

The age details are compiled for three stages, viz, those under 1 year, those between 1 and 6 years, and those above 6 years. The numbers under each stage primarily vaccinated were respectively 479,000, 231,352 and 18,971 against 396,618, 223,988 and 21,899 during the preceding year. The number of infants successfully vaccinated was 463,311, of children between 1 and 6 years 223,313, and of persons of other ages 17,299. Thus out of every 100 persons primarily vaccinated, there were 65 68 infants, of whom 63.53 were successfully vaccinated against 59.58 in 1880-81, 52.71 in 1879-80, 52.11 in 1878-79, 47.55 in 1877-78, and 42.18 in 1876-77. Thus every year is characterised by a progress in the protection afforded to infants.

Animal Vaccination.

Animal vaccination was carried on in Bombay and Poons. 3 calves out of 13 were inoculated successfully in Bombay with the Brussel's cow-lymph received from Dr. Warlomont. Animal lymph was sent to Tasmania, New South Wales, China and the civil surgeon at Surat. Except in Bombay where animal lymph only is kept up, and in Poona where both animal and human lymph were in use, vaccination in all other places was carried on from arm to arm and with human lymph.

Expenditure.

The total expenditure on account of vaccination may be seen from the following table:--

		TOTAL EXPENDITURE							
Establibiiment				1881-82.					
	Rs.	a.	p.	Rs.	a.	p.			
	94,875	8	10	1,13,995	1	4			
	20,045	8	5	21,939	11	3			
	326	13	6	327	4	6

Cost of each **successful** case, meluding all charges Cost of each successful case, excludmg the pay of the super-Vising officers.

The total cost for the whole Presidency including all charges was Rs. 2,60,355, and the average cost of each successful case was annas 5-10, or 2 pies less than last year.

Excluding the pay of the supervising officers, the average cost of each successful case was annas 4-7, or 5 pies less than for the previous year.

Inspections.

Taking the work of all the Deputy Sanitary, Commissioners, Superintendents, Assistant Superintendents and Inspectors together there were 5,289 encampments; 88,941½ miles travelled in 9,218 days; and 343,652 children inspected in 14,762 villages. Out of every 100 persons operated on, 43.72 were this year in-

Rombay Vaccination Act.

spected against 46.27 in the preceding year, 43.10 in 1879-80, 45.58 in 1878-79, and 35.53 in 1877-78.

The Compulsory Vaccination Act (I. of 1877) has been in force for four years and it is worked fairly well. There is a considerable progress in the number of infants protected, being 12,013 against 10,416 in the proceding year, 7,825 in 1879-80 and 6,558 in 1878-79.

This is the second complete year in which the Karáchi Vaccina- Karáchi Act. tion Act (IV. of 1879) has been worked in that city, and out of every 100 persons primarily vaccinated successfully there were 68:18 infants against 45:61 last year, which shows that the protection afforded to infants is increasing.

CHAPTER VII.—INSTRUCTION.

Education.

Receipts.

The income of the Educational Department in 1881-82 was as under:—

Provincial Funds		Rs. 11,28,148
Cess		7,63,307
Fees { Provincial Local		1,99,282 1,52,492
Funds of Native States Subscriptions		22,336
Municipal Assignments Interest on Endowments		82,342 49.029
Miscellaneous		26,321
	Total of Local Funds	12,95,109
	Grand Total	24,23,257

Expenditure.

The expenditure was as follows-

	Fro Provi Fun	ncia	1	From Loca Funds	.1	Total		
	Rs.	a	p	Rs.		Rs ар		
Direction and subsidiary charges Inspection and subsidiary charges Instruction (including all educational expendi- ture not coming under the above heads)	38,953 1,72,018 9,17,181		8 7	9,672 8 12,67,980 13		38 953 15 5 1,81,686 3 8 21,85,162 1 1		
Total	11,28,148	13	8	12,77,658 6	1	24,05,802 3 9		

and is an increase of Rs. 1,65,392 over the expenditure in 1880-81, chiefly due to the opening of more primary schools.

The following table shows at a glance the state of the department for the last five years:—

YEAR.	Number of Schools.	Number of Scholars.	of Provincial	Expenditure of Local Funds on- trolled by Government Officers	Expenditure of Private Funds on Aided Schools	Schools in Native States in- spected by Department
1877-78 1875-79 1870-80 1880-81 1881-82	E 701	248,140 243,**11 275,138 816,974 858,891	Rs. 11,43,925 10,51,729 11,02,630 10,89,118 11,28,148	Rs. 12,38,699 12,40,365 18,10,546 13,57,984 12,77,658	Rs. 8,41,868 2,44,747 3,68,379 3,79,529 4,14,153	834,493 344,770 356,703 394,258 587,554

Grants.

The grants awarded during the year came to Rs. 85,090. Rs. 4,100 was given to colleges, Rs. 37,775 to schools for Europeans, and Rs. 43,915 to Native schools. In addition to grants paid by results, Rs. 26,532 as fixed grants was paid to certain institutions such as the Bombay Education Society's Byculla Schools, the Pársi Benevolent Institution, the Sassoon Reformatory Rs. 2,751 were given to indigenous and the Anjuman-i-Islam. schools from local funds and Rs. 27,673 were paid by Government as building grants and special grants, chiefly to the Byculla Education Society and the Frere-Fletcher School. The total Government expenditure on aided institutions, including arrears of amounts not paid last year, was Rs. 1,57,307 against Rs. 4,15,963 expended from private sources.

Rs. 1,58,932 was spent on new buildings and repairs. this, Rs. 1,29,493 was spent on Government vernacular schools, Rs. 15,000 on the School of Art, and Rs. 7,945 on the agricultural class-room for the experimental farm at Hyderabad. A further sum of Rs. 31,203 was spent on educational buildings by the Public Works Department.

The Central Book Depôt has paid its way throughout the year Central Book without any subsidy from Government. The sale proceeds were Rs. 7,178, and Rs 7,920 were outstanding.

Depôt,

The number of depôts for the sale of school books is 217. School Books. The stock sold brought in Rs. 1,86,100, and the value of obsoleto and damaged books was written off. In Sind there is a growing demand for school books, and the sale proceeds were Rs. 6,474.

The number of Government colleges and schools was 3,978, of which 3,784 were lower class schools, and the average daily attendance was 179,446. In the 307 aided schools the attendance was 17,589 and in the 1,389 non-aided but inspected schools the attendance was 57,199. The attendance appears to be the best in the aided schools. Including the 30 police and jail schools there were altogether 5,704 schools and colleges, which had an average of 339,833 names on their rolls

Schools.

The percentage of scholars to population is best in the British districts of the Northern Division, where it is 251, and in the British districts in the Southern Division 2.08 of the population The percentage sinks to 1.86 in the North-East go to school Division, to 1.48 in the Central and to 81 in Sind. The Native States in the Southern Division stand at 1.21, while the Northern Division is at 1.13 and the Central at 1.11. Including Native States it would appear that the Southern Division possesses the highest percentage-1.81-of scholars, but by themselves the Native States stand at 1.16 against 1.73 in British districts. There is one school to every 13 square miles in the British districts in the Northern Division, to every 28 in the Southern Division, and 26 in the Central Division. In Sind there is one school to every 228 square miles, and in all the Native States there is one school to every 52 miles, while in the British districts the proportion is 1 to 37.

The number of Government schools has increased to 3,978. which is 243 more than in the previous year; the increase occurs in primary schools 181, in night schools 27, and girls' schools 19. Private aided schools have increased by 36 to 307 and inspected schools have also increased by 80 to 1,389. The increase has occurred in primary schools, night schools and girls' schools. With the increase of 361 schools the scholars were increased by 41,917 to 358,891.

The University.

The most important events in the history of the University are described in the following extracts from the Registrar's report to the Senate:

"Mr. Jairazbhoy Peerbhoy, a Justice of the Peace, offered to the University a sum of Rs. 5,000 m 4 per cent. Government paper for the purpose of founding a scholarship to be annually awarded to the Mahomedau candidate who passes the Matriculation Examination with the highest number of marks, and prosecutes his studies in this University, or proceeds to England with the same view.

"This offer was accepted with the best thanks of the Senate.

"Mr. Varpvandas Madhavadas, a Justice of the Peace and Fellow of this University, has lately offered to the University a sum of Rs 5,000 in 4 per cent. Government paper for the purpose of founding a scholarship to be annually awarded to the candidate who passes the First Examination for the Degree of B.A. with the highest number of marks in Sauskrit.

"The most important alteration in the bye-laws and regulations made during the last year was the abandonment of the limit of age below which candidates were not allowed to present themselves for Matriculation. Further concessions have been made to graduates in science who may be desirous of taking degrees in Medicine and in Arts. And the Senate have lately adopted, with certain modifications, a scheme laid before it by the Syndicate for new bye-laws which it is intended to substitute for the existing ones.

"The Baroda High School, having been raised to the rank of college under the style of the Baroda College, has been recognised in the Faculty of Aits for the purposes of the Previous Examination."

In 1880-81 there were two Previous Examinations, but in 1881-82 one only. 135 Hindus, 78 Pársis, 5 Christians, 2 Mahomedans and 1 other person passed the higher examinations,—that is, 221 out of 643 who were sent up. 3 out of 8 passed the M.A. Examination, 36 out of 125 passed the B.A., and 34 out of 88 passed the First B.A. 71 out of 278 passed the Previous Examination. 2 went up for the First B.Sc. Examination, and both passed; for the Second B.Sc. Examination 2 succeeded out of 7.5 men were admitted to the degree of Backelor of Laws. 37 men passed examinations in Medicine and Surgery and 31 the examination in Engineering. Of the whole 221 who were passed at the different examinations 47 were educated in private colleges.

Comparing the detailed figures for 1881-82 with those for the previous year, for the F.E.A. or Previous Examination 71 passed against 179; for the First B.Sc. 2 against 2; for the B.A. 36 against 34; and for the M.A. 3 against 4. There were also 34 candidates who passed the First B.A. Examination, and 2 who passed the Second B.Sc. Examination-two tests which now for the first time appear in the returns. In Law 5 passed against 17 in the previous year. In Medicine, for the First L.M. & S. 23 passed against 21, and for the L.M. & S. 14 against 24. In Engineering 15 passed for the First L.C.E. against 26 the year previous, and 16 for the L.C.E. against 17.

Arts Colleges.

The Elphinstone College passed 2 men in the First Examination for the Degree of B.Sc., one in the Second Examination for the Degree of B.Sc., and one in the Examination for the Degree of M.A. The Free General Assembly passed one man in the Second Examination for the Degree of BSc., and one in the Examination for the Degree of M.A., and Saint Xavier's passed one man in the Examination for the Degree of M.A.

The results of the Previous Examination were generally poor and much below those obtained in the previous year. But the best average is shown by Saint Xavier's, and the Free General Assembly is about equal to the Elphinstone and ranks above the Deccan College.

In the new examination—the first for the degree of B.A.— Saint Xavier's again has the best average, but is nearly equalled by the Decean College. In the remaining examinations—the First Examination for the Degree of B.Sc. and the examinations for degrees—the figures generally show a slight improvement over those of the previous year, and the Elphinstone College takes the first place.

There is a great falling off in the Gujarát College, which is attributed to the opening of the Baroda College, where the fees are said to be lower.

In the Rajaram College the fee receipts have doubled, and the average attendance has risen from 12 to 22.

Special Colleges.

The fee receipts have risen from Rs. 3,417 to Rs. 4,880, but Law School. there is a falling off in the number of students on the rolls at the end of the year from 152 to 136. 45 out of 65 candidates passed the examination in the Jurisprudence Class, and 5 out of 27 passed the LL.B.

The fee receipts have advanced from Rs. 13,825 to Rs. 14,125, and the number of students in the University classes is the largest number as yet borne on the college rolls.

Grant Medical College.

5 students obtained certificates from the college with the view of prosecuting their studies in England. 44 students sent in their names for the First L. M. & S. Examination of the Bombay University, and 23 passed, 4 in the first and 19 in the second class. In the Final Examination for the L.M. & S. Degree there were 27 candidates, and 14 passed, 5 in the first and 9 in the second class. In the Hospital Apprentice Class 9 candidates passed the final examination, and the two female students of Midwifery having finished their course of study were examined and found qualified for the usual certificates.

College of Science,

The fce receipts have fallen from Rs. 5,917 to Rs. 5,012, and there is a decrease in the attendance returns of all the classes except the University classes.

Civil Engineering Class. The students of the Civil Engineering Department did well at the University examinations; 24 and 22 presented themselves for the L.C.E. and F.C.E. Examinations respectively, of which number 16 passed the L.C.E. and 15 the F.C.E. In the college it has been the invariable custom to hold a searching examination before the end of the second term in each year, and only to permit those who seem to have a fair chance of passing to go up for the University examinations. This of course has the effect of giving a high ratio of men passed to men sent up for examination. The opening of the Southern Marátha and Goa Railways has been the means of giving employment to many members of the class which passed out in December last,

Agricultural Class. The Agricultural Department is not flourishing in point of numbers. Dr. Cooke complains that the passed pupils have no career before them, and there is absolutely nothing to tempt youths to enter the class, and after two years of hard work the youth finds that there is no employment obtainable for which his qualifications specially recommend him.

A course of veterinary lectures and another of botanical lectures were delivered, the latter supplemented by practical demonstrations in the Ganesh Khind Gardens. There is a small farm attached to the college, of which 161 acres are under cultivation, and 5 students out of 6 passed the practical examination in farming.

They were examined practically in the field in the use of agricultural implements—an examination which was conducted thoroughly, and which lasted for some days. The students received lessons in budding and grafting, and each student had himself to work on mango stocks obtained from Bombay. This is by no means the least important part of the practical education of a class. Much may be done to improve the natural fruit of the country, and the cultivation and improvement of the mango has been much neglected.

Forest Class.

Of the Forest Olass Dr. Cooke writes:—"The final examination of the senior class was held in September 1881. 5 students passed the final test. I regret to state that the guarantee of a cortain number of annual appointments awarded by competition to the members of this class has been withdrawn. This of course is discouraging; and unless the class be placed on some sound footing as regards the subsequent employment of its members, it cannot possibly thrive. It seems to me certainly a move in the right direction to endeavour to recruit the subordi-

nate service of a department, which should be a scientific one. with educated men. If it is worth while specially to train gentlemen in England for the upper grades of the forest service, it must surely be equally important to train men for the subordinate grades in India. The cost of training here is a mere nothing, and the success of the system introduced throughout India of training subordinates for the Public Works Department has been such as to justify a similar course as regards the Forest Department. But without some inducement to educated youths, such as that given by the Public Works Department to all the engineering colleges in India, young natives will not be found to come forward and spend, after Matriculation, two years in a course of study from which no advantages are to be gained."

The account of the Mechanical Engineering Department is satisfactory. 'The maistry or sub-overseer class was finally examined in January 1882. 16 candidates presented themselves, of whom 12 passed. The students who passed out of this class last year have all been fortunate enough to obtain employment-3 in the Public Works Department, 2 in the Irrigation Department, 1 on the Southern Marétha Railway, 1 m Local Funds, and 1 with a contractor at Kalyán. The average number of apprentices on the roll of the workshops during the past year has been 71.7, the average daily attendance being 55.9."

Mechanical Engineering Class.

Special and Technical Schools.

The average daily attendance was 112 and the fee receipts were Rs. 1,587. The attendance in the elementary school has School of Art. improved, but in most of the senior classes there is a slight decrease.

Sir J. J.

Out of 206 candidates 57 passed, and the examiners notice that some improvement had been made in the elementary school, especially in practical geometry; they also give a satisfactory account of the ateliers of painting and sculpture, but speak less favourably of the architectural class, where the difficulty is the desire of the students to leave for profitable employment before they have obtained a high degree of proficiency. In woodengraving little improvement has been shown, and the examiners recommend that a qualified teacher should be obtained for this important branch. Of the pottery the examiners speak very favourably, but remark that improvement is much needed in the manufacture, and recommend that the services of a skilled potter should be secured. In the examination in drawing 33 passed out of 139 examined: this is a decided improvement, but some of the Government schools which are provided with drawing-masters have not sent up any candidates.

At the commencement of the year there were but 4 pupils in the school, all of whom went up for examination in July before a committee of officers from the Public Works Department. In this examination 3 candidates were successful, and were provided with employment as overseers or sub-overseers in the Government Department. The school was subsequently closed

shool, Hyderabad. as a separate institution; but in place of it an engineering class has been attached to the high school, and this class is now attended by 10 pupils.

DavidSassoon Reformatory.

The number on the rolls has risen from 204 to 208. Of these 42 were learning English, 106 Maráthi and 32 Gujaráthi. Of the boys learning English half attend on alternate days at the Central Press, where they learn printing, &c.; 20 boys also who are employed during the day at spinning-mills in the neighbourhood, and 7 who are occupied in the gardens, &c., do not attend school. The progress in reading, writing and arithmetic was fair, but the workshops are now so fully employed that perhaps scarcely sufficient time is devoted to mere book-learning. When examined the order and discipline were excellent, the premises clean, well kept and tidy, and the institution evidently in a flourishing state.

Dhárwár Factory, The Inspectors' returns show 69 apprentices against 38 in the previous year. No report has been received from the managing committee; but the examination of the boys in reading, writing and arithmetic showed that progress had been made.

Surat School.

The Fardunji Parekh School of Art and Industry at Surat shows an expenditure of Rs. 5,536 against an income of Rs. 5,901, including a Government grant of Rs. 2,000 and receipts from sale-proceeds amounting to Rs. 1,943. With regard to attendance the Secretary reports that there were 51 boys under instruction, 22 of whom were learning drawing, while 16 were being trained as carpenters and 13 as fitters. The Secretary adds that, in 1881-82, 6 boys left the school to seek for employment as fitters, and 4 of them have been taken on m mills or factories.

Dhulia Workshops. The industrial class at Dhulia has proved to be a failure; the boys commenced well, but after six mouths most of the boys ceased to attend the carpentry-class, because, they say, their parents do not wish them to waste any time in learning carpentry to the prejudice of their regular school studies.

Ratnágiri Factory. No report has been received from the managers of the factory, but the Inspector reports that the number of apprentices has risen from 73 to 80, and that the boys passed a fairly good examination under the first four vernacular standards.

Orphanage Press, Poona.

This institution, which is managed by the Mission of the Free Kirk of Scotland, has been registered under the ordinary grant-in-aid rules and also receives a special grant of Rs. 20 for every pupil learning a handicraft, on condition that fair progress has been made during the year, and that each boy, for whom the special grant is claimed, has attended half-time at an elementary school and is presented for examination by the Inspector. This year special grants were paid for 7 pupils who were learning printing or book-binding.

Orphanage, Pandharpur.

The Pandharpur Orphanage, which is under the management of the municipality, shows an attendance of 65 boys who are to be taught a trade as carpenters or blacksmiths. The institution receives a grant according to the ordinary rules for aided schools,

and it is proposed that it should be annually inspected by an officer of the College of Science.

This institution, which is under the management of the Apprentices' Bombay Education Society, receives boys, Europeans and Indo-Europeans, who are employed in the workshops of the G. I. P. Railway or in other of the larger factories of Bombay. The conditions of Government assistance have been obliged to be altered, and the allowance is now Rs. 10 per mensem for three-fourths of the whole number of inmates: this arrangement to be subject to reconsideration at the end of three years, when it may be hoped that the number of inmates will have so far increased as to make it profitable to the Society to revert to the original terms.

Byculla.

The Byramji Jijibhai School at Poona shows an attendance of 59, or 8 more than in the previous year, and it appears that 20 students of the third year have been granted certificates qualifying for the grade of hospital assistant.

Medical Schools.

The Byramji Jijibhai School at Ahmedabad has not been established long enough for a final examination to be held, but the attendance of pupils has risen from 56 to 65.

A medical school has been established at Hyderabad, and at the close of the year there were 19 scholars on the list.

The Broach class has been closed as a failure, but the attendance in the eight classes now open is 286 against 207 in the previous year. 41 students of the first year and 22 students of the second year passed examinations, the greatest efficiency being observable in Násik, Nadiád and Belgaum.

Agricultural Classes in High Schools.

Matriculation.

The examination was conducted as in the previous year at Bombay, Poona, Belgaum, Ahmedabad and Karáchi. 60 institutions sent up 1,374 candidates, of whem 388 passed. Of these 294 wero Hindus, 53 Pársis, 36 Christians, 2 Mahomedans and 3 others. The second language generally chosen was Sanskrit by 164 boys, 50 took Gujaráthi, 48 Latin, 45 Maráthi, 44 Persian, and a few others took French or Hebrew or other language. The Bombay schools passed 33 per cent. of the pupils they sent up, while the Mofussil schools passed 39 per cent. The schools in Nativo States have done best by passing 50 per cent. of their pupils, Government schools passed 37 per cent., private schools passed 33, and of those who were private students only 8 per cent. succeeded. The general success is not so good as in the previous year, when 34 per cent. were passed, whoreas this year the success was only 28 per cent.; it is said the examination was a very strict one.

High Schools.

The returns show an increase of 4 schools and 831 scholars. Under Government schools there is an increase of 582 scholars. under aided an increase of 5 schools and 37 scholars, and under inspected schools a decrease of 1 school, but an increase of 212 scholars.

The Elphinstone School again shows a large increase in attendance and fee receipts, and the teaching staff has been increased; yet the annual cost of educating each boy has fallen from Rs. 15 The Poona School has also made marked progress during the year. After Elphinstone and Poona comes the Sátára School, and next to Sátara is placed Thána, where an increase in attendance is attributed by the Inspector "partly to the reduction of the fee rates and partly to the increasing efficiency of the school." The fee rates were reduced under instructions from Government, and the people of Thana deserved the favour which was shown them, as they have been liberal in their contributions for the purchase of a new school-house. Mr. Waman Ramchandra Oka has very generously offered Rs. 600 for the purpose of awarding a prize every year in the name of Mr. Coghlan, the late Judge of Thana, to the student from this school who passes the Matriculation Examination with the highest number of marks.

In the University examination the Poona School did well, but the Elphinstone School showed a falling off, owing to the unexpected failure of the Gujaráthi or Pársi boys. The Gujaráthi classes generally contribute most to the success of the institution, but this year the Maráthi side passed double the number which the Gujaráthi side could claim. But the Elphinstone School still heads the list of high schools which are represented at the Matriculation. The Sátára School improved its place in the University list. Ratnágiri did very badly, and General Waddington reports that he cannot speak favourably of the general efficiency and progress of the school. Sholápur did not send up any boys to the Matriculation. Thána has improved its place on the University list, and the results at the Inspector's examination contrast very favourably with those obtained in the previous year.

With regard to the aided schools for natives, the four Mission schools passed 27 boys in the University examination, while the number of boys who passed from the Parsi Bonevolent Institution fell from 18 to 11, but yet this school is highly spoken of. Among the Mission schools the Free General Assembly's Institution in Bombay appears to be first; the Poona Mission School does not rank high.

The schools for Europeans and Eurasians were successful in the University examination, the number of candidates who passed having risen from 27 to 37.

The Inspector was thoroughly well satisfied with St. Mary's School, Poona, and with the Scottish Orphanage at Máhím. He was also pleased with the Bishop's High School, Poona, and with the Bombay Education Society's Girls' School; but in instituting any comparison between the girls' school and the boys' it must be borne in mind that a considerable portion of each girl's time is devoted to needle-work, and also that the whole of the household work is done by the girls themselves.

Some progress has been made at Dhulia and Nasik, and the falling off at Ahmednagar may be attributed to a severe out-

break of cholera, which caused a panic and interrupted schoolwork at the most important period of the year. In the University examination Nasik came first, and Dhulia was easily beaten by Ahmednagar.

Among the Government schools in the Northern Division, Surat Broach and Nadiád all show a good increase, but Ahmedabad has made marked progress. The four Káthiáwár schools are also flourishing and show an increase in attendance, and the Native States are generally most liberal in their educational policy.

The Junagad High School has been completed and is occupied by the school. This is a fine building planned and built by the State engineer. The plans prepared by the late Major Mant, involving a very large expenditure, were not adopted. The Darbar are adding quarters for resident students and a gymnasium. At Bhávnagar the gymnasium has been completed,—a fine pukka building of stone erected by the State engineer. Plans and estimates are ready for a new high school at Navánagar, which will be creeted. The four high schools of Káthiávár will then be supplied with handsome and commodious buildings. Other smaller buildings have been creeted, and the States have shown their usual liberality in meeting suggestions. At Pálanpur the Darbar have nearly completed the large building which is to accommodate the Anglo-vernacular school, vernacular school and girls' schools.

The school at Surat and Broach failed to pass a proportionate number of candidates at the University examination.

The results of the Matriculation were very satisfactory as regards high schools in the Southern Division,—the Sardárs' School at Belgaum and the Kolhápur and Dhárwár schools coming fourth, fifth and sixth in the University list and giving place only to the three great schools of the Presidency and Poona.

The fee receipts at Hyderabad show a satisfactory increase, and the Inspector reports that the Shikarpur School is becoming popular with the townspeople. The examination results of the year were generally satisfactory, and from the greater number sent up for examination it would appear that higher education is now appreciated by the natives of Sind. The aided schools are also flourishing, especially the grammar school.

Middle Class Schools.

The returns for the whole Presidency show an increase of 13 schools and of 1,544 scholars. Government Institutions show an increase of 8 schools and 930 scholars, Aided an increase of 7 schools and of 247 scholars, and Inspected a decrease of 2 schools but an increase of 367 scholars.

The 53 aided schools in the Central Division may be classed as under—

```
"35 schools connected with Missionary or religious bodies—26 for Europeans and Eurasians, or Anglo-Portuguese. 9 for Natives.
18 schools not connected with Missionary belies—10 for Europeans and Eurasians, or Anglo-Portuguese. 8 for Natives.
```

The examination results of the Government schools show that the greatest success is obtained under mathematics and then under English and history and geography, while in the aided native schools the highest success is in English and geography, then mathematics and then history. The European and Eurasian schools passed 50 per cent., obtaining the highest success in writing and mathematics and then in English.

The railway schools at Parel, Lonávla and Sholápur are favourably reported upon, the Lonávla School especially having made great progress. Amongst the new schools aided this year for the first time is the Israelite Benevolent Society's Anglo-Vernacular School at Bombay, which promises well, and will be of much service to the Beni-Israel community. The Alexandra Institution for Pársi girls was found in a very bad way, with no lady superintendent, the whole of the teaching work having boon entrusted, for several months, to an assistant and 3 pupil teachers.

North-East Division. A particularly good account is given of the Government first grado schools at Násik and Ahmednagar, where the classes have outgrown the accommodation which is available for them.

The head-master of the Ahmednagar first grade middle school showed commendable zeal in forming a school museum of natural history. Besides the collection of ferns given by Mr. Fairbank, the school was presented by Khán Bahádur Nasirwanji Kharsetji with 20 interesting specimens from China and Japán. Other objects in the museum were obtained by the boys themselves during excursions with the head-master and his assistants.

The account of the second grade schools is also satisfactory, the most advanced being those at Málegaon and Bhusával. At the former town and also at Yeola the people petitioned for an extension of the present English course up to the standard of the First Class Public Service Certificate Examination. They stated that many parents in those towns who do not wish to give their sons a high school education, are desirous that they should qualify for admission to the public service, or at least put something of a finish to the preliminary studies prescribed in the first three English standards which they now learn.

At Bhusaval the Great Indian Peninsus Railway Company requested that special accommodation might be made in the second grade Anglo-vernacular school for the instruction of the children of their native employés. It has now been arranged to build a new school-house to accommodate 250 children, the company giving a site and Rs. 2,560 towards the cost of the building,

They have also consented to give Rs. 120 per annum as their share of the cost of an extra teacher.

A second grade school at Godhavi, in the Ahmedabad District, has been opened through the liberality of Mr. Virchand Dipchand, who has contributed a sum of Rs. 180 per annum for three years to its support, has supplied a room for the boys to sit in, and has given a donation of Rs. 50 for books and furniture.

In Kaira the people of Umreth and Borsad have guaranteed Rs. 15 per mensem, and classes have been opened which next year will appear as second grade Anglo-vernacular schools. At Kapadyanj also an English class will shortly be opened.

Two local committee schools in Belgaum and two in North Kánara have been opened, while one school in Dhárwár has been closed. A school for European girls at Dhárwár has been put upon the grant-in-aid list, and a new English school has been opened at Lakshmeshvar.

Southern Division.

Northern

Division.

An English class was opened at Rohri in Sind.

Sind.

The Study of English and Optional Languages, &c.

The figures, for the institutions connected with Government show a large increase of 2,988 in the number of students learning English, in all 25,225, the increase chiefly occurring in middleclass and high schools. There is also a satisfactory increase in the numbers learning Sanskrit, Latin and Persian.

The Government schools of the higher class are attended chiefly by sons of officials and private clerks, but it is satisfactory to observe that a large number of boys belonging to the wealthy class and of professional gentlemen as well as the sons of merchants, tradesmen and artisans also attend these schools, besides a few boys of the cultivating class.

Vernacular Schools (Boys').

The number of vernacular schools for boys at the end of the year was 5,012 with 312,771 scholars against 4,705 schools with 275,642 scholars at the end of the previous year.

The details for March 1882 are:-

Number of		Incre	Mo of	
Schools	Scholars	Schools.	Scholars.	
3,603 146 1,233 30	231,272 9,564 70,450 1,485	208 15 82 2	27,594 1,137 8,290 108	

Government ... Aided Inspected Police and Jail School

The increase of the year for second grade and vernacular schools Cess Schools. together is 281 schools and 30,909 scholars against an increase of 323 schools with 30,982 scholars in 1880-81. This increase is due in the first place to the prosperous state of the country

and to the growing desire of the people for education. And as a proof of this increasing desire for elementary instruction it may be noted that the fee receipts rose from Rs. 1,29,107 to Rs. 1,52,491. A second cause for the satisfactory results of the year is to be found in the local fund committees who have worked hard to extend and improve the system of local cess schools throughout the country.

Municipal Grants. The proportion which children of cess-payers bear to the whole number on the rolls is 46 per cent. in the second grade Anglovernacular schools and 61 per cent. in vernacular schools, which is higher than the proprotion last year.

The primary schools in the town of Sukkur have for some years been under the management of the municipality, which receives grants from Government according to the ordinary rules for payment by results. No other town has followed the example set by Sukkur, but large assistance was received from some of the most important municipalities, such as Bombay, Surat and Ahmedabad. The Presidency, in particular, has been most liberalin its assistance, and has lately made an additional grant of Rs. 5,000 per annum in aid of Urdu schools which are to be established by the Anjuman-i-Islam.

Town and Rural Population. With the view of showing the educational position of the urban as compared with the rural population, the following table has been prepared. It shows that in ten years the number of children at school has nearly doubled, and that the progress has been a little better in the rural districts:—

i	Inhabited Towns and Villages	Population	teac Verns Stand	erog- ov the tional	Number of learning V Stand	Veruacular	or Chi	
				March 1882.	March 1871	March 1872	March 1871	March 1882
Towns with a population of 5,000 and upwards Smaller towns and villages	179	2,776,812 18,452,962	499	744 3,242	45,497 86,728	88,063 167,284	1.68	3 19 1·24
Total	26,652	16,229,774	2,344	3,986	132,225	250,897	81	1.57

The increase of local committee schools in the Central Division has been general, but is most marked in Poona, Thána and Ratnágiri.

Central Division. Though the number of schools has not for want of funds increased very much, yet the increase of schools nearly equals that reported last year, showing that the older schools are prospering.

It appears that there are marked signs of progress in the zillás, and that the operations of the committees could be largely extended if funds were available to meet the cost of developing existing schools and of opening the new schools which are urgently required.

The aided schools of the division consist of 17 Mission schools and 44 schools under native managers (including 38 indigenous schools). And of these 61 schools, 3 receive fixed grants and 15 grants by results, while 43 receive sums varying from Rs. 10 to Rs. 50 according to the Inspector's report.

There were 6 free schools in the North-East Division last year. There are now 12, and they are attended by 463 pupils, chiefly of the Mahár caste. These schools are established at the following places:—3 in Khándesh, 1 Nagar town and 8 in Násik. They are well attended. One of these was examined, and the reading, pronunciation and explanation of the Mahár boys were found to be as good as that of intelligent boys of other castes. Besides the boys who attend the above schools, 71 low-caste boys attend the other schools in the district. No demand for separate free schools remains to be satisfied in Násik, as they have been given wherever required. The Deputy Inspector writes:—"I would record with the greatest pleasure that the impetus given to learning has at last reached the lowest stratum of Hindu society."

"No new free school was opened in Ahmednagar Sub-Division, but 129 boys of the lowest castes were attending the ordinary cess-schools. There is besides a large attendance of such children at the Mission schools established in all parts of the zilla.

The Inspector reports :-- "The teaching of the little children in the preparatory class of the vernacular schools has been much improved and enlivened during the last 18 months. Formerly I used to find that their lessons were confined to writing letters of the alphabet on sandboards or slates and to learning by rote integral and fractional multiplication tables. These symbols and numbers were taught without any sort of concrete associations to interest and inform either the eye or the mind; and I was not surprised to find, therefore, that dull children and even bright children who had no love for figures frequently took two years to get out of this dreary forcing-house. The Deputies have now been instructed to see that the uzalani tables are taught in the concrete. Arithmeticons, colour charts, form-boxes and wall-pictures of animals, birds, &c., have been ordered for all the larger schools; and at least one of the object-lessons given each week is taken by the head-master himself. Skilfully used, this apparatus will go far towards making a child's first years at school happy as well as instructive; and it will gradually work improvement in the system of teaching all through the school.

"In furtherance of this object I also instructed some of the most intelligent masters in the division to encourage their pupils to collect specimens for a school museum, and where circumstances favoured to get up a small garden in the school premises. The masters of no less than 48 schools have made very creditable collections of natural objects, and 15 gardens have been begun. Prizes will be given in January next for the three best gardens in each sub-division."

Increased provision has been made for the children of the lower castes in the Southern Division. There are 2 schools in

North-East Division.

Southern Division. Dhárwár, 3 schools and classes in Kánara, 3 in Belgaum and 1 in Kaládgi. The 2 schools in Dhárwár are kept under Mussalmán trained masters. Other schools also are under Mussalmán teachers, but they are untrained and unpassed men. Most of these schools and classes are attended by Mussalmán boys also. The schools at Dhárwár and Hubli are the largest in the Southern Division, with about 75 boys on the roll. Besides these, many low-caste boys attend the ordinary Government school of their village.

Sind.

There were many applications for the establishment of local fund schools in the Karáchi Collectorate, but for want of funds only a few schools could be opened. On the whole it may be said that the desire for education is slowly spreading, and leading zamíndárs or merchants make an offer of a grant-in-aid or bind themselves to secure a regular attendance of a certain number of pupils. Much, however, yet remains to be done before it can really be said that an effective desire exists generally among the country people, and some parts of Sind are very disheartening.

Night Schools.

The night schools have been included above under veruacular schools for boys. There are now 134 schools with 3,919 scholars, the result of the year being an increase of 35 schools and 1,037 scholars.

At Junnar in Poona the school is attended by grown-up men who are generally labourers and artisans. The pupils do not remain long at school, leaving it as soon as they have learnt to read and write a little; but their attendance at school is not regular. The one school at Sánand is mostly attended by adult agriculturists. All the four schools in Sátára are reported to be in a satisfactory condition. The Deputy remarks:—" If funds be available, it will be possible to start a dozen schools of this class in The poor rayats and their sons who are required this district. to work hard in their fields or after their cattle in the course of the day are often found to be very anxious to attend the night schools, and obtain in them the elements of education. I have at present 5 applications for night schools registered in my office which I have been unable to grant for want of funds." The school at Kúrla is almost wholly used by boys working by day in the spinning and weaving mills.

The private night schools of the Theistic Association in Bombay now number 175 pupils. The studies are generally confined to Maráthi reading and writing and a little arithmetic, and the students are mostly working men or peens. The Gujaráthi night school numbers only 32 pupils and it is mantained by the charity of Shett Jeram Shiwjee. The school at Ahmednagar is chiefly attended by Mahomedans, and contains 51 pupils. In Broach the Deputy Educational Inspector reports that they are attended by nearly all castes, except Pársis: three-fourths of the total number are adults, and the schools are becoming gradually more popular.

Indigenous Schools.

The statistics for such of these schools as are connected with the department have been included above under vernacular schools for boys. The separate returns show a total of 73 schools and 3,548 scholars, or a decrease of 2 schools but an increase of 173 pupils.

Besides these it is reported that there are 3,669 indigenous schools which are not recognised by the department or which do not comply with the terms under which they would be recognised. At Godhra there are 7 Mussalmán schools, but of the 7 teachers only one could read and write. In Sind only the Korán is taught.

The Inspector writes: "I have tried to make something of these schools, but with any fixity of procedure nothing can be done. So in the Upper Sind Frontier, where I was well off financially, I have given a sum to be spent exactly as the Deputy Collector thinks fit, reporting to me at the end of the year how he has spent it. The advantage of such looseness of procedure is that it enables a district officer to give a reward on the spot for anything that strikes him as meritorious in education, and many of these village schools might be induced not to teach under Government standards but to impart some knowledge of arithmetic and writing if they thought that the district officer would give them bakhishcesh (present) as an encouragement to their efforts, but we cannot get them to come under our system."

The Education of Mahomedans.

The number of Mussalmans under instruction by the department has risen from 35,865 to 41,688. A Mussalman gentleman has been appointed Doputy Inspector of Mahomedan schools, Central Division and Southern Division, and a Special Doputy was attached to the Northern Division. There are more than 70 Mussalman schools, and a number of classes are attached to Marathi schools for their convenience.

Mussalmán teachers were employed throughout the year in the high schools at Dhulia, Ahmednagar and Násik, but the returns show only 36 Mahomedan boys learning under middle school and 8 under high school standards. The number of Mussalmán children attending Maráthi schools in the Nagar District rose from 713 to 1,312.

Police and Jail Schools.

The returns show 30 of these schools with an attendance of 1,485 scholars, the increase for the year being 2 schools and 108 scholars.

The Poona City Jail School under a trained teacher is in a very thriving condition and passed several scholars. The Poona Police School makes reprogress and is in a very inefficient condition. It is taught by one of the constables. The jail school at Sholápur is fairly reported of. It is held for two hours daily, and is taught by one of the convicts: attendance is optional. In the Satara Police School the examination results were satisfactory. At the Ratnágiri Jail School 47 convicts were presented for examination (39 males and 8 females). The former showed fair progress, the latter none.

The Khandesh School is reported to have made no improvement and the attendance at the Ahmednagar School has fallen off. The Nasik School is in very fair order. The school attached to the Surat Jail contains 4 pupils. Accurately speaking, it is no school; the convicts who are willing to join are made to attend after the whole day's full labour has been done, and are taught by one of the prisoners. They have no books. The Police Line School at Surat contains 106 boys and men and is in a prosperous state. The discipline and progress are very satisfactory. In Ahmedabad there is a school in the Police Lines, which has two departments, one for the children in the lines and one for the sepoys. The school is efficient. In the Bhaddar School for unarmed sepoys only reading is taught.

The Belgaum Police School is doing well under the superintendence of the head-quarters chief constable. The teacher is a trained man. The sons of constables attend this school.

At the Shikarpur Jail School many adults have acquired a knowledge of reading, writing and arithmetic.

Girls' Schools.

The total for these schools is 326 with 19,917 girls, the increase being 28 schools and 2,305 girls. These are exclusive of 28 schools and 1,581 girls shown under high and middle schools and of many girls attending boys' schools.

The aided schools in Bombay and Poona are in many cases very useful institutions, and include 12 Mission schools and 10 schools under native management. Of the Mofussil schools, whether local committee or Native State schools, the Inspector, Central Division, does not give a very satisfactory account:—

"It is only with great difficulty and by sending special servants to collect the children and bring them to school that attendance is secured. I still see but little real interest in or desire for female education. The bulk of the girls that do attend are mere children, and the object which their mothers have in view in sending them is generally to keep them out of mischief. The female school at Ratnágiri has been in existence for more than thirty years, and I see little or no improvement in it in all that long period, nor do I believe it has ever turned out an educated woman."

There are 6 girls' schools in the city of Poona, and it is said that new private schools have been established in their neighbourhood, which offer greater inducements in the way of prizes and presents.

576 girls attend boys' schools in addition to the 440 on the rolls of the girls' schools in Thana. All the existing schools are reported to be in a good state of efficiency, except the one at Murbad.

The Maráthi schools in Bombay appear to be in a good state of progress, and the percentage of attendance is also good. In the Gujaráthi schools the attendance is satisfactory; but the Deputy Inspector is of opinion that the people have not yet learnt to prize education for their girls, nor is it fashionable among

them. Girls are sent to school only while they are too young to be of, use in domestic affairs and to keep them out of mischief at home. He thinks that girls should be bribed and tempted to attend school.

Every considerable town in Ahmednagar is now provided with a girls' school, and the chief school at Ahmednagar is attended by nearly 100 Mussalman girls, several of whom belong to families of good social standing. But by far the first school in the North-East Division in point of organisation and efficiency is the boarding-school of the American Mission at Ahmednagar, which is a model to the whole district.

There are, besides the aided schools in Surat, 8 Pársi Pancháit endowed girls' schools; but the Government girls' schools do not make the improvement that they should, and this is partly due to the fact that as the Surat Zilla sends no women to the Female Training College for training, so trained women sent into Surat will not stay there contentedly, but soon desire to return to their own zillas. In Broach there is little interest taken in female education by the people themselves, and there is an utter absence of that encouragement which municipal and local bodies might give by rewards and scholarships. Some of the girls' schools in Kaira and Ahmedabad are very prosperous. Those at Kapadvanj and Viramgam have especially attracted the notice of the district officers.

The schools at Limbdi, Wadhwan, Bhavnagar, Junagad and Navanagar would compare favourably with the best zilla schools, and the Navanagar School can turn out better needle-work than any other school, except perhaps the Maganbhai School in Ahmedabad. It is reported that mistresses are more popular than male teachers, and can conduct schools in an efficient and orderly manner. At the same time the difficulty of obtaining the most suitable women for training does not diminish. It was hoped at one time that masters would see the advantage of educating their wives. But masters are very backward, both in sending their wives to be trained and in educating their own children.

The school at Kolhápur is supervised by an English lady employed by the Darbár; and particular praise is given to the schools in Native States and specially to the Lakshmeshvar School. The Kánarese school at Anturbentur, in the Gadag Táluka, is a model village mixed school. Some five or six years ago there was no school there, and the patel and kulkarni were the only persons who could sign their names. The school has maintained its reputation for the last two years.

In Sind the main difficulty is to get respectable mistresses whom the people will trust. There is not much abstract opposition to female education; it is mainly that the schools are practically not good ones, and there is almost an insuperable difficulty to get women of any education who also bear good characters. During this year an offer was mde by two Hindu gentlemen to aid in building a Hindu girls' school at Hyderabad, which is an encouraging sign.

Training Colleges and Normal Schools.

At the end of the year there were 145 men under training in the Poona College or 11 more than in the previous year, the increase being due to a large supply of men from the North-East Division. The boarding-house attached to the college contained 134 resident students at the end of the year. The average monthly number was 130, and the cost per head of board and maintenance averaged to Rs. 3-3-5 per mensem. The Poona Female Training College has 42 names on the rolls; great attention is given to plain needle-work, and meetings are held once a fortnight of the women and other native ladies after school hours. Essays written by some of the women are read, and addresses given on some useful or scientific subject by native gentlemen, which call forth a number of remarks and questions.

The Ahmedabad Training College contained 91 students at the close of the year. 20 men were sent out to places in accordance with the marks obtained by them. The results of the annual examination were in every way satisfactory, and the college has been efficiently and quietly managed. At the Normal School for women 31 women were under training. A teacher lent to the Baroda State is very highly appreciated there, having been appointed, on an increased salary, mistress of the newly opened normal class.

The Training College at Rájkot had 63 students on the rolls; 60 were Kathiáwáris and 3 from Cutch. The attendance in the Dhárwár College has risen from 97 to 100, and the examination results were satisfactory.

Schools in Native States.

The expenditure on these schools was Rs. 5,66,745. The largest amount of nearly 2½ lákhs was spent in Káthiáwár. Other large items are Kolhápur Rs. 1,05,000, Cutch Rs. 36,000, Sángli Rs. 30,000, Mahi Kántha and Pálanpur Rs. 28,000, Rewa Kántha Rs. 21,000, Sávantvádi Rs. 14,000, and Miraj Rs. 11,000.

No returns are available for Baroda and Janjira.

In Miraj the schools are very largely attended by the children of cess-payers, the proportion of such to total on rolls being 83. In Jawhar the Chief appears to take an intelligent interest in his schools, and is reported to contemplate building a gymnasium for the Jawhar School. 4 of the schools in Savantvádi teach up to the highest vernacular standard, and in efficiency the schools in this State are generally on a par with Government schools.

In Káthiáwár the number of fund schools has risen to 453, and the number of scholars to 30,483, and may be said to be steadily progressing in popularity and efficiency. The private schools in Káthiáwár are 89 in number, and the number of scholars has risen to 2,217. More attention is being gradually paid to the wants of schools, and buildings are being erected in Pálanpur, Rádhanpur and Mahi Kántha. The State Kárbháris of Dovagadha and Lúnáváda in the Rewa Kántha have agreed to employ in State service boys who pass under the highest standards.

This encouragement will induce boys to remain at school through the whole course. The Darbárs appear to take a real interest in education, and are willing to meet suggestions as far as possible. At Udepur the new administration has been most liberal in opening schools and in sanctioning necessary increases proposed by the department. All schools are gradually being well supplied with buildings, books and furniture.

There are 18 night schools in Káthiáwár and 7 in Cutch, and the attendance is generally satisfactory.

The Education of Chiefs and Minors.

No young Chiefs attend any of the Government schools in the Poona Collectorate, and of the 82 minors under the care of the courts only 6 attend Government schools. Two nephews of the Chief of Vinchúr attend the Vinchúr School, and are making satisfactory progress. The three sons of the Dáng Rája are still at Dhulia School, but they take too many holidays and do not get on very satisfactorily with their studies. The eldest Kuvar of Dharampor is at the Rájkumár College; the two daughters attend the girls' school; Bánsda Kuvar and the Sachín Chief attend the Rájkumár College. The young Kuvar of A'mod and the young Thákor Sáheb of Dehej are educated in the local schools.

There is a large number of wards under the charge of judicial and political officers, and those who are old enough and rich enough are ordered to attend school. The number so ordered is not given, but from the figures of the Central Division it would appear that the orders are not observed very strictly, for out of 1,350 only 212 actually attend school. The richest of these, 5 in number, are taught English.

In the Sardárs' class which is attached to the Rájárám College at Kolhápur there are 10 names on the rolls against 13 last year, and the general progress was satisfactory. The Nawáb of Savanúr was absent during the whole year on account of his marriage. The Rája of Mudhol has left off attending the college, and is studying law and legal procedure with a view to taking up the management of his State.

The Rájkumár College was established for the education of young Chieftains; last year there were 37, and at the close of 1882 there were only 34 on the rolls.

The decrease in numbers, though it must be regretted, is apparently inevitable, as there appear for the present to be no sources whence to draw reinforcements. A college such as this, where the question of quantity's subordinate to that of a limited quality, is necessarily subject to fluctuations, and, for the present, the supply of young Chiefs in the northern half of the Bombay Presidency would seem to be at the ebb. It is well, however, that the college has already had the opportunity of educating several young Chiefs of eminence. At the time when it was first opened, the supply of young Chiefs under Government tutclage was unusually large, and having educated them it is necessary to wait some time for their sons.

The Rájkumár College. Four kooers have joined within the past year, while 7 have been withdrawn. Kooers Hurbhumji of Morvi and Jewansinghji. of Bhávnagar left India at the end of last April for Cambridge, where they are now pursuing their studies under Mr. Borissow, of Trinity College. There is reason to hope that this experiment will be attended with the happiest results. The fact that Hurbhumji has been able to pass the "Previous" in his first term is creditable alike to his energy and ability. He will now give almost exclusive attention to his favourite study of mathematics. Jewansinghji likewise is doing well; but probably he will not remain in England long enough to take a degree.

Maháraja Kesrisinghji of I'dar left after residing two years in the college. Though somewhat wanting in physical activity he had won the esteem of all his companions by the dignity and goodness of his character. He can speak and write English very fairly, and has founded an "I'dar Prize" for the best student in English in remembrance of his connection with the college.

The Nawab of Janjira had also resided only two years in the college. He joined in July 1879, and left at the beginning of last September. As he came at the ago of 17 with little or no education, his case was not at the outset a hopeful one; but he was diligent and persevering and made as much progress as he could: the two years which he spent in college were years of considerable profit.

Amra Wala of Bilkha and Ghujeffur Khan of Manawadar had both spent eight years in the college, having joined in 1873. Both, when they left, were in the second class. Their progress in school was not altogether satisfactory, Amra Wala's work having repeatedly been interrupted by delicate health, and Ghujeffur Khan's tastes leading him more towards riding and field sports than towards study. But both are intelligent and well-disposed, and likely to do well hereafter. Each is fully equal to take an honourable part in the improvement of his State.

The young Mir of Hyderabad, Sind, joined the college on the 18th of July; he left on the 15th of September, and has not since returned.

Students.

The following is the list of students, as now existing, in class-order:—

1st Class.	Age.					
1. The Thákor of Gondal	16					
2. Kalubha of Wadhwan	19					
3. Ladhubha of Rájkot	21					
4. The Thákor of Vala	17					
5. The Thákor of Ilol	18					
6. Bhupatsingji of Bhimrad	20					
2nd Class.						
7. Nasrullah Khan of Sachin	13					
8. Ramsinghji of Sihor	13					
9. Doulutsinghji of Dhrol	16					
10. The Raja of Bansda	17					
11. Edal Khan of Junágad	16					
12. Raisinghji of Bhimrad	16					
13. Nathubbai of Kali Talao	16					
14. Jaysinghji of Sihor	16					
15. The Nawab of Sachin	15					

3rd Class.	Age.			
 Mohandevji of Dharampor Harisinghji of Lákadiya Chandrasinghji of Navánagar Ranjitsinghji of Navánagar Shivasinghji of Gadkha Raisinghji of Mállia 	19 17 16 9 15			
4th Class.				
22. Akhorajji of Vala 23. Khoda Wala of Bilkha 24. Gagubha of Shapur 25. Jivabhai of Ribra 26. Naja Wala of Bilkha	12 20 15 13 19			
5th Class.				
 27. Madhavsinghji of Wadhwan 28. Jaswatsinghji of Lathi 29. Madarsinghji of Sayla 30. Kala Wala of Lunee 31. Giga Wala of Bagasra 32. Jetmal of Dedan 33. Mulwaji of Kotra Sangani 34. Ajitsiaghji of Dhrangadra 	12 14 13 10 9 13 9			

The three eldest Chiefs in the first class were about to leave at the end of the term to take part in the administration of their States.

The general health throughout the year was remarkably good. The out-door games and riding exercises were carried on as usual, and some stimulus has been given to cricket through games with the local gymkhána and high school. The cavalry drill was regularly conducted; and at the commencement of the current term a class of the boys was put through a regular course of musketry with the Snider rifles supplied to the college by permission of His Excellency the Governor.

General Tuble of Castes, &c.

The number of children in schools connected with Government is divided between the different races or castes as under:—

	1881-82.	Per Cent.
Christians Hindus { Bráhmans Others Mahomedans	2,734	2·07 21·16 61·79 11·62 2·40 0·20 0·76
Total	358,891	•••

Two new libraries (at Dholka and Erandol) were registered, and the total number is now 92.

The expenditure from the Dakshina was as under:-

•	$\mathbf{R}\mathbf{s}$.	8.	p.
Allowances to Brahmans	1,413		5
Do. to teachers and students	13,412		6
Rewards to authors	3,685		0
Prize Committee and Accountant	2,171		3
	20,681	12	2

The Dakshina Prize Committee examined a large number of compositions, and awarded prizes of the aggregate value of Rs. 425. With regard to school-books the usual work of revision has been carried on under the supervision of the 4 vernacular committees, and several useful publications have been added to the list of sanctioned text-books.

Resolutions of Government affecting the Educational Department.

Mr. Jacob made a special inquiry into the educational condition of Europeans and Indo-Europeans in the Presidency of Bombay, and on his report Rs. 1,50,000 were granted to clear off claims accumulated under the grant-in-aid rules. An allotment of a grant of Rs. 2,000 was made in aid of the education of destitute and neglected children, and a conditional promise was given that the ordinary grant-in-aid rules shall be made slightly more liberal for all classes of schools, and that increased aid shall be given to industrial education.

The year was also marked by a correspondence between the Government of Bombay and the Supreme Government with regard to a wide application of the principle of self-government in educational matters. Final orders were not passed during the year, but it is proposed to confer large powers on the municipal authorities of great towns, and to make a new departure in educational progress.

Literature and the Press.

LITERATURE.

The total number of works published and catalogued during the year is 931, or 49 less than in the previous year. These 931 works may be first divided as follows:—

Number of Works,

Books	•••	•••	•••		•••	679
Pamphlets		•••		•••	•••	9
Periodicals	•••	•••	•••	•••	•••	.225
Mwcellaneous	•••	•••	•••	•••	•••	18
				Total		931

Among these last may be mentioned the following:-"Butler's

Method of Ethics" by Professor Selby of the Deccan College; "Sindi Ballads, translated from the Sindi, by T. Hart-Davies of

Of these 814 were Oriental and 117 European books.

the Bombay Civil Servico", a small work interesting as an index to the character of the people of Sind so far as ballad poetry can depict the feelings and notions of a people. "The Plants and Drugs of Sind; being a systematic account, with descriptions of the indigenous flora, and notices of the value and uses of their products in commerce, medicine and the arts", by James A. Murray, Curator, Karachi Municipal Museum. "A Lecture on Agricultural Reforms in India", by Assistant Surgeon Vishram Ramji Ghollay, chiefly drawn from the works of Mr. Robertson of Madras. "The Journals of the Bombay Branch of the Royal Asiatic Society for 1880 and 1881" contain several papers from the pen of Mr. E. Rehatsek, M.C.E. The series entitled "Papers for Thoughtful Readers" continues to be issued by the Christian Tract and Book Society of Bombay for the benefit of educated persons, particularly natives of India. Five numbers were issued this year. The Quarterly Journal of the Poona Sárvajanik Sabhá contains papers on such subjects of current and general interest as "Hindu and Mahomedan Religious Endowments"; "Mr. Wedderburn and his Critics on a Permanent Settlement for the Deccan"; "Tobacco, its Cultivation, Manufacture and Cure"; "Factory Legislation in India"; "Indian Vernaculars and University ity

Reform"; Land Law Reform and Agricultural Banks." .1e The journal is conducted and edited by native gentlemen, a crisid contains some well-written articles. "The Theosophist", now in the third year of its existence, continues to differ the information on

English Works. Oriental philosophy, art, literature and occultism, embracing mesmerism, spiritualism and other secret sciences, and is popular with a large section of young educated natives, commanding a comparatively extensive circulation. "The Orient", an Anglo-Indian monthly magazine of literature, science and art, is an ably conducted periodical likely to become popular.

Oriental Publications.

This year there are altogether 814 Oriental publications: of these 347, that is, about 42 per cent., are original; 58 or 7 per cent. are translations; and 409 or 50 per cent. are reprints. the whole 151 are educational works, while the remaining 663 are non-educational. Again, classified according to the languages. the number of "books published in more than one language" is 174 of the total number of publications in Oriental languages. In the years 1878 and 1879 the number of publications under this head was unusually large, owing, as was explained in the reports for those years, to the increased desire evinced by publishers for placing before the Maráthi reading public old Puráns in Sanskrit with their translations into Maráthi. The issue of these publications gradually ceased in 1880 and 1881, owing, it is believed, to the publishers having found the work unremunerative. Of the 174 publications issued in 1881 in more than one Oriental language, 35 are Sanskrit and Maráthi books mainly, of the above nature. Turning to the publications in a single language, it is noticeable that formerly the Maráthi works constituted the majority of the publications, but latterly the number of the publications in Gujaráthi has nearly approached the number of Maráthi publications, and in the year under review whilst the Maráthi books are 228 or about 28 per cent. of the total number of Oriental publications, the Gujaráthi books number 249 or 30 per cent. of the total. Thus the two great vernaculars of the Presidency, Maráthi and Gujaráthi, absorb between them more than half (58 per cent.) of the total of Oriental publications. There have been only 11 books published in Sindi this year, 9 of which are reprints and 2 works in Kánarese. The Hindi and the Urdu, the two forms of Hindustáni, respectively count 13 and 44 of the total. Of these also 9 in the former and 35 in the latter are mere reprints. Brij and Márwádi have three works each, and Afgháni has only one publication. The proportion which the publications appearing in the classical languages bear to the grand total is very small, being 10 per cent. Again, of these 86 classical works 69 are purely Sanskrit, 11 Persian, 4 Arabic, 1 Zend and 1 Mágadhi. Almost all these classical publications are mere reprints of old books.

Biography.

Only 4 works have been registered under this head. 3 of them are in Gujaráthi and one in Maráthi. "The Life and Letters of Gokulji Sampattiráma, and his Views of the Vedánta", is a tolerably well-written work. Gokulji, a Nágar Bráhman, was Diván the Junágad State from 1848 to 1878. He appears to have biself-educated and to have risen by personal merit. The life of ambus and an account of Bacon make two more works under head.

Drama.

There and publications registered under this title. Of these 25 are in Marathlo in Gujarathi, 11 in Urdu and 1 in Sanskrit.

Of the 25 Maráthi publications 8 are founded upon legendary tales given in the Purans, and of the 10 Gujarathi works 2 are drawn from the same source and 2 are epitomés of the drama of Shákuntalá or the Lost Ring. Of the 11 Urdu works, 7 are small dramas in verse founded upon the popular stories of Laila and Majnu, Chhel Batáu and Mohaná Ráni, &c., and are chiefly written in the Gujaráthi character. "Sangit Shákuntalá Nátak", or the musical drama of Shákuntalá, is a Maráthi translation of Shakuntala or the Lost Ring, the popular master-piece of Kálidás. It is particularly adapted to acting, and is interspersed with verses set to different airs and tunes of Indian music. "(Shri) Harischandra Nátak, or a drama based on the story of king Harischandra", dramatises the popular and stirring tradition about king Harischandra of Ayodhyá or Oude which is to be found in the Devi Bhagawat Purán. "Sitame Hasarat ane Nekie Nekbakht, or you will reap as you sow", is a historical piece in Gujaráthi representing the times when inveterate and constant wars were carried on between the kings of Irán and Turán. The principal characters—Nekbakht, king of Irán, and Hasrat, king of Turán—are impersonations respectively of good and evil, and the aim of the author is to represent the triumph of good over evil. "Sawki Matana chhokráná upar Padatan Dukh, a drama describing the miseries inflicted by step-mothers on their step-children", -is another Gujaráthi work deserving notice. "Satikam Prabodha Chandrodayam náma Nátakam, or the rise of the great moon of knowledge", is an old drama of much reputation among the learned. It resembles the old English "Moralities", in which virtues and vices were personated for the purpose of inculcating moral and religious truth.

Under the head fiction there are 41 publications, 13 of which are Maráthi, 18 Gujaráthi and 10 others. Many of these are reprints of well-known popular tales, as the Wetál Panchwishi, or the twenty-five stories of the demon Wetál, the Shuk Bahátari, or the seventy-two tales told by the parrot, the Children's Friend, the Arabian Nights, the Sinhásan Battishi or the thirty-two stories of the statues, the Gul Bankáwali, the Gajará Máru, the Sadewant Sáwling, &c. "Prince Shurasen or the story of Prince Shurasen", a small Maráthi tale, though plain is well written. "The Shirastedár" is also a short Maráthi tale written in an attractive style. The single work in Kánarese, entitled "Kamaláksha and Padmagandhi", is a story based on Shakespeare's tragedy of Romeo and Juliet and adapted to the taste of the Kánarese reader. "Rasselas translated into Sindi" is a translation of Johnson's Rasselas.

There are 44 publications under this head. Of these 28 are Maráthi, 10 Gujaráthi and 6 others. Nearly one-half of them are elementary school-books. Among the remaining half there are in the Maráthi section 17 numbers of the serial entitled "Kawyetihás Sangraha" which is intended for the publication of old chronicles, historical and biographical, and old unpublished poems in Maráthi and Sanskrit. In Gujaráthi the most important addition to Gujaráthi literature is "The History of the Common-

Fiction.

History.

wealth of the Magian Monarchies, which arose out of the fragments of Alexander's conquest of Persia". "Fatu Hussham; or the rise and progress of Mahomedan conquests" is an Arabic work containing a history of the reigns of the successors of Mahomed-Abubakar, Umár, Usmán and Alli. "Riazool Akhbár, the history of Abool Fida from the creation to A.D. 1328, translated from the Arabic; and Kholá Satul Akhbár (abridged) from A.D. 1329 to 1529 translated from the Persian" give a history from Adam down to the Arab descendants of the Prophet Ismail.

Language.

This head comprises 94 publications: 24 are Maráthi, 12 Gujaráthi, 7 Sanskrit, 2 Hindi, 4 Sındi, 1 Arabic, 2 Persian, 1 Urdu, 7 Maráthi and English, 19 Gujaráthi and English, 1 Somáli and English, 1 Sanskrit and Maráthi, 1 Sanskrit and Gujaráthi, 3 Sanskrit and English, 7 Persian and English, 1 Hebrew and Maráthi, and 1 Urdu, Persian, Arabic and Sanskrit. Most of these publications are reprints of school-books in different vernacular and classical languages, books of paraphrase, small elementary grammars, glossaries, &c.

Law.

There are 7 works under this head. Of these 4 are in Gujaráthi. 1 in Marathi, 1 in Sanskrit and 1 in English and Urdu. the productions are either reprints of old works or translations, or summaries of the existing Acts and Regulations.

Medicine.

5 works are registered under this head. Of these 2 are Gujaráthi, 1 Maráthi, 1 Sauskrit and Maráthi, and 1 Arabic. "Dukha Nivárána" is a vory useful attempt to popularise Europe medicines among the Gujarathi-speaking population. "Stri Rog Widnyan; or diseases of women and their treatment" is a Marathi book founded upon European and Indian medical works. remaining works are reprints.

Miscellaneous.

The head miscellaneous comprises 258 volumes or 31 per cent. of the whole number of Oriental publications. Prose translations of the old Vedic hymus and of some of the Puráns, several numbers of the different periodicals in the Maráthi and Gujaráthi languages, both literary and technical, a number of essays, large and small, on a variety of subjects, works on astrology, on military exercises, short accounts of well-known mythological personages; receipts for the preparation of various articles of daily use, maps, &c., have all been put under this general head.

Poetry.

Poetry comprises a large number of publications. They amount to 168, or a little more than 20 per cent. of the total number. Of these 25 are Sanskrit, 51 Maráthi, 42 Gujaráthi, 26 Urdu, and 22 others. They include new editions of some popular Puráns; some reprints of old and popular vernacular and Sanskrit poems, of songs and of hymns, and reveral original pieces.

Politics.

Under this head no work was received for registration.

Philosophy.

37 publications are registered under this head, including mental and moral science, and almost all are reprints. Of these 10 are in Sanskrit, 4 in Maráthi, 6 in Sanskrit and Maráthi, 9 in Sanskrit, Maráthi and English, and 8 others. There are several editions of the well-known Bhagawat Gitá,

some of which are accompanied with translations, "Eknáthi Bhagawat" or the Bhagawat Puran by Eknath. There is also an edition of the well-known Bhagawat Puran. "Panchdashi" or a book on Vedánt philosophy consisting of fifteen chapters by Widyaranya, and some tracts on popular Vedantism were also published during the year.

This important head comprises 68 publications. The collection contains reprints of several respectable treatises on some of the sacred ceremonies of Brahmanism, reprints of portions of the Korán, of Christian Gospels, of Zond Awastá, of works relating to the modern sect of Swami Narayan, of some Jain hymns and Jain religious tracts, and a few works of the Indian Deistic or Rationalistic School.

20 works were registered under the former and 21 under Mathematics the latter of these heads. Almost all the publications comprised under these heads are small school manuals calling for no special notice.

No works have been registered under this head during this

The 79 printing presses in this Presidency are distributed as follows:—Bombay has 37 presses in which 578 books were printed. The Deccan has 23 presses in which 195 books were published. Gujarát has 17 presses in which 147 books were printed. Sind has 2 presses in which only 11 books were published. Of the total number of the publications 674 were printed, while the remaining 257 were lithographed.

THE VERNACULAR PRESS.

At the close of the year 1880 there were 78 newspapers: Newspapers 5 of these were discontinued and 19 others were started during the year, leaving 92 papers at the ond. Of these 4 are entirely English. Last year there were 2 English newspapers only, of which I died during the year under report and 3 new papers appeared in the same period. Last year there were 11 Anglo-Maráthi papers, while this year there are 7. Of the 4 papers which have disappeared from under this head, I has ceased to exist, and 3 have been transferred to the head of purely Maráthi papers. There were 30 Maráthi papers; of these 4 have ceased to exist and their place has been supplied by 12 new publications. There were 4 Anglo-Gujaráthi papers at the close of last year; one of them became a purely Gujaráthi paper during the year, and has been, therefore, transferred to the latter head. Last year there were 27 purely Gujaráthi papers, and 8 additional newspapers and periodicals which have appeared this year have been added to them, making a total of 35. Last year there were single papers in Kanarese, Urdu, Urdu and Hindi, and Persian; the Urdu and Hindi paper has ceased to publish the Hindi portion, and a new one in Persian and Urdu has appeared. The four English papers are printed. Of the 45 Anglo-Marathi and purely Marathi papers 29 are printed and 16 are lithographed. Of the 38 Anglo-Gujaráthi and purely Gujaráthi newspapers 35 are printed and 3 are lithographed. The Kanarese, Urdu and Persian papers are all lithographed. Thus 68 papers are printed and 24 are lithographed.

Religion.

and Natural Science.

Travels and Voyages.

Most of the papers published in cities and large towns, such as Bombay, Poona, Surat, Ahmodabad, Thána and Sátára, are printed, while those published in smaller towns are generally lithographed.

Maráthi Papers. The only daily paper in Maráthi is the *Prabhákar*. The *Dnyán Prakásh* of Poona is bi-weekly. The remaining Maráthi papers are weeklies, except four fortnightly and four monthly periodicals.

Gujaráthi Papers. Of the Gujaráthi papers 3 are dailies, 1 is a tri-weekly and the rest are weeklies, while the 12 periodicals are monthlies. The Kánarese, the Persian, the Persian and Urdu, and one of the two Urdu newspapers are weeklies, the remaining Urdu paper being a tri-weekly.

English
Papers.
Papers where
printed.

Two English papers are printed in Bombay and two at Poons.

11 Maráthi papers are printed in Bombay, 8 in Poona, 4 in Thána, 3 in Sátára, 3 in Ratnágiri (including 1 at Vengurla), 3 in Belgaum, 2 in Násik, 2 in Alíbág, 2 in Sholápur (including 1 at Pandharpur), 2 in Ahmednagar, 2 in Dhulia, and 1 each in Dhárwár, Kaládgi and Kolhápur.

22 Gujaráthi papers are printed in Bombay, 6 in Surat, 4 in Ahmedabad, 3 in Kaira, 2 in Broach and 1 at Rájkot in Káthiáwár.

The Kánarese newspaper is printed in Dhárwár, the two Urdu and single Urdu and Persian paper in Bombay, and the single Persian in Karáchi.

Thus 90 newspapers and periodicals are published in the British territory of this Presidency, and 2 papers are published in Native States, namely, 1 at Kolhápur in the Southern Marátha Country and 1 at Rájkot in Káthiáwár.

All the chief towns of the collectorates of this Presidency, except those of the districts of Kánara, Shikárpur, Hyderabad, Thar and Párkar and Upper Sind which continue to be without any papers of their own, have one or more papers according to the importance of the place. For instance, Poona has 10, Surat 6, Ahmedabad and Thána have 4 each, Sátára, Belgaum, Ratnágiri and Kaira have 3 each, and so on. Bombay alone has 38 papers, the Deccan 37, Gujarát 16, and Sind has 1 only.

Price,

The Satya Prakásh continues to be the cheapest paper, the subscription to it being only 4 annas per annum. 8 others, including the Kesari, charge 1 rupee per annum. The Kesari is a large sheet containing a great deal of matter, and is cheap at the price. The charge for the Deshi Mitra is a rupee and a quarter. The yearly subscription of 8 papers is a rupee and a half; that of 13 papers is 2 rupees; that of 2 papers is 2 rupees and a half; and that of 16 papers is 3 rupees.

Age.

The Bombay Samáchár has attained its 63rd year. The Jáme Jamshed its 51st year. The Prabhákar is 43 years old; and there are 9 others between 26 and 40 years' standing.

Editors.

Of the 92 newspapers and periodicals, 2 English papers are conducted by Deccani Hindus, one by a Pársi, and the remaining one by a Eurasian, while 41 Maráthi and Anglo-Maráthi papers

and periodicals are conducted by Deccani Hindus. One Anglo-Marathi is conducted by a European, apparently assisted by one whose vernacular is Marathi, and who writes the Marathi portion of it. Two Marathi newspapers are conducted by Jews and one Marathi paper is edited by a Gujarathi Hindu. Of the 38 Gujarathi and Anglo-Gujarathi newspapers and periodicals 19 are conducted by Parsis, 18 by Gujarathi Hindus and 1 by a Mahomedan. The Kanarese paper is edited by a Deccani Hindu. Of the 2 Urdu papers one is edited by a Mahomedan and the other by a Hindu from Upper India, and the Urdu and Persian and the purely Persian papers are conducted by Mahomedans.

The Quarterly Journal of the Poona Sárvajanik Sabhá is the organ of the Association at Poona, and is published in English; a monthly journal is also published in Marathi which discusses political questions. The Indu Prakásh and Native Opinion are admittedly the best Maráthi papers, as the Bombay Samáchár and the Jame Jamshed are the best among Gujarathi papers. The Mahrátta and Kesari have distinguished themselves by the violence of their language, notably in the matter of the Diván of Kolhapur, for which their editors were criminally prosecuted for The Dnyánodaya is the organ for Native Christians, while the Din Bandhu is the organ for Shudras, and distinguishes itself by attacks upon the Brahmans. The Yajdán Parast and the Hakh Majdayasnámúm teach the principles of the Zoroástrian religion, while the Israel and the Satya Prakásh strive for the amolioration of the condition of the Jews, and the Kosid-i-Mumbai and Kashfu Akhbár write for Mahomedans. The Pársi Panch (illustrated) and Dútardu are comic papers in Gujaráthi, and the latter has lately contained clever and satiric sketches of Pársi life. The *Hindu Panch* is professedly comic and is said to be coarse.

The Gujaráthi periodicals are three times as numerous as the Maráthi periodicals, and both the Gujaráthi and the Maráthi periodicals contain useful information on literary, scientific and social subjects. They rarely criticise administrative measures, and are mostly published in Bombay.

The Native Press hailed the evacuation of Kandáhár with great pleasure, but was quite alive to the necessity of being wary as to Russian intrigue and of watching Persian movements, and represented that with India content England need not be anxious about Central Asia. Still some advocated help being given to Abdul Rahman while his position was insecure against Ayub. The letter of a native gentleman who gave his experiences of Russia was widely printed with remarks that India was loyal to England, and that Russia need not be feared if the natives were kindly treated, and it was generally thought that the English contribution of five millions pounds sterling to the Afghan war was insufficient and ungenerous and should have amounted to one-half the cost. There was some discontent manifested regarding the tardy fulfilment of Mr. Gladstone's promise to repeal the Vernacular Press Act, but there was universal satisfaction when the Act was repealed without restriction. The repeal or modification of the Arms Act was repeatedly demanded, and it was alleged that the triffing reward for the destruction of wild beasts and snakes had

Character.

Chief Topics of the Press.

caused an increase in the number of lives destroyed, while the number of beasts and snakes killed had decreased owing to the restrictions placed on the possession of arms. The exemption of the professional classes and officials from the license-tax has been noticed with suggestions to bring them under the Act and lower the incidence of the rate on the poorer classes or to repeal the Act altogether, and that this measure and a reduction in salt duties should have preceded any abolition or reduction of the cotton duties, for the retention of which there was the further reason that Indian industries required to be encouraged and even supported by a protective tariff. In dealing with the question of the salt duty it was alleged that the tax was so heavy that disease and death among cattle and even men were caused by its prohibitive price, and that the poor on the Ratnágiri coast are obliged to use sea water instead: but the press considered that the opium monopoly should be maintained, and condemned the agitation in England on this question as moral prudery which while it cost the agitators nothing would cause an enormous loss to the Indian revenue if the monopoly were abolished. The stringency of the ábkári laws and the heaviness of the ábkári duties were complained of, as well as the forest law and the severity with which it is said to be worked. The Dekkhan Agriculturists' Relief Act was criticised unfavourably and described as doomed to failure, as the savkar alone was not answerable for the condition of the rayat, and it was contended that the relations between the two classes being beneficial on the whole, the State should not have interfered to disturb them, although in the kindred policy of a Pawn Brokers' Act many papers maintained such an Act would be beneficial and extremely serviceable as a protection to the poor against extortionate money-lenders.

The policy of encouraging local industries and its practical application in the orders regarding the purchase of stores locally were commented upon with thankfulness and the suggestion made that specimens of the manufacture of each district should be collected by the district officers.

The interference of Government has also again been solicited to superintend the management of religious and charitable endowments which are said to be much mismanaged and the funds misapplied, and the curious insinuation has been made that more good would have been done by the prohibition of early marriage than by the abolition of suttee.

The encouragement given to private capitalists to construct railways was applied, but the decision to carry a line to Goa instead of Kárwár was unhesitatingly condemned and denounced as a sacrifice of Indian interests, while the reduction of telegraph rates and newspaper postage was gratefully acknowledged. The instructions of the Government of India on the restriction to be observed in the revision of land revenue settlements were highly applied, and some papers advocated that progress in this direction should be carried one step further and a permanent settlement introduced into the country. The decentralisation scheme was considered a proof of the great anxiety entertained by Lord Ripon for the progress of the country, and the wide exten-

295 Chap. VII. INSTRUCTION.

sion of the franchise to municipalities was advocated to give a vigorous impulse to local self-government, as it was held that the existing municipal constitutions allowed too much scope for official interference, and the new scheme was commended, provided the power of local authorities was restricted by law. The principle of nominating only men of good family to the Native Civil Service was disapproved; and it was asserted that the gentlemen already nominated to the Service not being men of ability. their nomination would, it was feared, give Government a ground for saying that natives were not fitted for the Covenanted Service. It was, therefore, desired that the Service should be thrown open to competition in India also.

The Marathi papers devoted considerable attention to the Raja of Kolhapur and to affairs at Baroda. They did not believe that the Maharaja was demented, but argued that his unfortunate condition was caused by the great oppression to which he was subjected by the people who surrounded him; and papers, said to be in the handwriting of the Karbhari himself, were referred to as undoubted proofs of his complicity in the offences which were charged against him. It is just to add that these publications formed the subject of a criminal prosecution for libel in which several editors were convicted and sentenced to imprisonment and fine. The Diván of Baroda also received the censure of the Maráthi Press, and his administration was denounced as a failure by the same papers which attacked the Karbhari of Kolhapur. The papers published in Gujarát freely criticised the conduct of the Native States of Kathiawar, and particularly condemned the Chiefs of Junágad and Navánagar for their mal-administration.

These are some of the principal subjects upon which opinions were expressed in Native papers; there are many others perhaps equally important, but space will not permit of their being referred to.

BOMBAY BRANCH OF THE ROYAL ASIATIC SOCIETY.

During the year 18 resident and 3 non-resident members were elected. 8 resident members have withdrawn and 1 died, so that there remain on the roll 156 resident and 81 non-resident members.

Members.

There are 18 members on the roll of the geographical section of the Society, 4 resident and 14 non-resident.

The following papers were read during the year:-

The Alexander Myth of the Persians.—By E. Rehatsek, Esquire.

Specimens of PregIslamitic Poetry, selected and translated from the Hamasah.—By E. Rehatsek, Esquire.

Emporia, chiefly ports of Arab and Indian International Commerce before the Christian era.—By E. Rehatsek, Esquire.

Peculiarities of Hindu Rites and of their Times: Translation, with notes, of Chaps. 4-13 of Dharma Sindha.—By Rev. A. Bourquin.

List of Plants seen at Mahábaleshvar; or a short contribution to the Botany of the place.—By Dr. J. C. Lisboa.

Translation of select Abhangs of Tookaram.—By Rev. Dr. Murray Mitchell.

During the year under report 11,945 new works and 5,353 old works were issued to members and subscribers. The daily average issue was 48 works: 435 works were bought by the Society against 408 works purchased in 1880; and 167 works and 61 pamphlets, together with charts of the Marine Survey and maps of the Revenue Survey of the Great Trigonometrical Survey of India, were presented to the Society.

The subscriptions received from the different classes of members in 1881 amounted to Rs. 9,871-14-0 against Rs. 10,637-4-0 in 1880.

MECHANICS' INSTITUTE.

During the year under review 94 works were bought against 150 works in the previous year, besides 33 newspapers and 35 periodicals: 43 works and 189 pamphlets, &c., were presented to the Institute, and there are now altogether 9,489 volumes in the library.

The number of volumes of specifications of patents in the library was 2,701, and 41 were received during the year.

The number of books, periodicals and newspapers issued during the year was as follows:—

Books	•••	•••	•••	•••	•••	18,607
Periodicals	•••	•••	•••	•••	•••	4,780
Newspapers		•••	•••	•••		3,874

The following lectures were delivered:—

Atmospheric Prossure, with experiments, by Mr. Jiwáji Jamsetji Modi, B.A.

The Unity of Nature, illustrated with experiments, by Rev. D. Mackichan, M.A., B.D.

The Practicable Improvements of Bombay, with special reference to the drainage, by Surgeon-Major H. Cook, M.D., M.R.C.P.

Gleanings from the Vedas by Professor P. Peterson, M.A.

There were 116 life members and 238 subscribers on the rolls of the institution at the close of the year.

Arts and Sciences.

The classified catalogue of the articles exhibited in the Museum is now in the Press, and will include the local vernacular names of the specimens as far as possible, so as to make the publication much more useful than if it were to contain simply the Latin scientific names, which only a few, comparatively, understand or know.

It has been decided by Government to give an annual grant of Rs. 1,200 for the collection of specimens, and it is hoped that the Museum will now improve rapidly, as hitherto it has depended almost entirely on contributions from private sources.

Victoria and Albert Museum.

A collection of specimens of cereals, pulses, oils, oilseeds, wines allway Chaptes is boing made for a Museum in Germany at the lasters of High timent.

Harbour Chaptain have a first vitors to the Museum during the years.

under report was 480,160%, and the average daily attendance 1,650.

CHAPTER VIII.—ARCHÆOLOGY.

The fourth volume of the Reports of the Archeological Survey was published during the year. It illustrates the Buddha caves of Western India and contains 133 drawings and 157 inscriptions. The fifth volume was in preparation and will be published about January 1883. Nine Kanarese inscriptions at Bijapur were copied in facsimile and other inscriptions were obtained at Kolar and Bilgi. At Aihole and Pattadakal, plans sections were made and photographs taken of thone at Badaminata in that be found there. The same work was dropies of inscriptions were in its vicinity, and photographs and pery rich in beautiful remains obtained at Gadag which is said to be viction was made of a mound of mediæval architecture. An excavite a Buddha stupa. at Elephanta which was supposed to

CHAPTER IX.—MISCELLANEOUS.

Ecclesiastical.

THE number of clergy at present attached to the Diocese of Bombay is 66, and they are classified as follows:—

Clergy.

Chaplains				27	
Society for the Propagation	n of t	he Go	spel.	14	(12 Europeans and 2 Natives.)
Church Missionary Society	v	•••		14	(9 Europeans and 5 Natives.)
Society of St. John the E	vang			6	to maiofidual and a final tall

Masters of High Schools		•••	•••	$\tilde{2}$	
Harbour Chanlain	• • •		•••	1	
•					
				66	

7 clergymen, besides the chaplains, are in receipt of salaries from Government as Ministers of Holy Trinity Church, Sonápur; St. Peter's, Mázgaon; Kolhápur Camp and Pánchgani, and Chaplains of the Jail and the Harbour, Bombay.

Confirmation was administered for Europeans at Ahmedabad, Confirmation. Aden, Deesa, Mount Abu, Nasirabad, Ajmere, Neemuch, Udaipur and Igatpuri, and for natives of this country at Ajmere and Neemuch. Confirmations were also held during the year for Europeans at St. Mary's and St. Paul's Churches, Poona, Colába, Kirkee, Mázgaon, St. Thomas' Cathedral and Sonápur, and for natives at Kámáthipura, Poona and Dápoli.

The cemeteries in actual use at all the stations visited were in good order, and the Lord Bishop considers that there is not one which does not, according to climate and circumstances, do credit to the officers in charge. A large part of the old cemetery at Deesa and one of the boundary walls has been carried away by a flood. The course of the river has since been diverted, and the question of building a new wall at the present boundary of the cemetery, which is on the edge of a steep bank, is under the consideration of the Superintending Engineer, being complicated by the fact that the river has not yet cut a bed for itself in the course to which it has been diverted, and that a new wall, if erected at present, might be in danger of being undermined like the old one. The new cemetery at Poona, for which there is much need, is in course of being enclosed, and it is hoped will be consecrated before the end of the year. A small piece of ground at Government House, Ganesh Khind, an addition to the cemetery at Baroda granted as a free gift by His Highness the

Cemeteries.

Chap. IX. MISCELLA-NEOUS.

Gáckwár, and a small piece of ground provided by private donors for the burial of Native Christians in the neighbourhood of the city of Poona were consecrated.

New Churches. In September the Lord Bishop consecrated the new Cantonment Church of St. George at Ahmedabad built by Government to take the place of the barrack which had long been used as a place of worship. The church is appropriate without being other than a plain substantial building. Its acoustic properties are excellent, and it is in every way satisfactory. Much has been done by private liberality to add to the fittings provided by Government. The same is true of All Saints' Church, Malabar Hill, which was consecrated on 16th January. At Mount Abu the chancel of St. Saviour's Church, which had already been in use for some years, was also consecrated.

In September of last year the Lord Bishop laid the foundation stone of the Church of St. Saviour for the use of Native Christians at Ahmednagar, which is now almost ready for consecration. The same may be said of a new church at Kolhápur. The Ahmednagar Church is being built with funds raised by private subscription, and both it and the Kolhápur Church, to which Government has contributed, were first set on foct by bequests of the late Bishop Douglas. The Kolhápur Church is also approaching completion.

Seamen's Church, Prince's Dock Subscriptions are coming in slowly for the proposed Seamen's Church to be crected on the site granted by Government near Prince's Dock. There is no apprehension at all as to securing the completion of the church within the time allotted by Government.

Continued progress is reported in the discharge of the educational work of the Church of England.

The Cathedral High School, Bombay.

The Cathedral High School, Bombay, has increased in numbers from 136 in 1881 to 143 in the year under review, and the Government grant carned has increased from Rs. 936 in 1879 to Rs. 3,009 in 1881. The Girls' School in connection with it has increased from 39 in 1881 to 60 in 1882.

The actual progress of the two schools named below is represented by the following figures:—

Grant-in-Aid earned	1870	1881.
The Bishop's School	1,948	2,707
St. Mary's School (about)	1,500	1,900
Number of Pupils.	1881.	1882.
The Bishop's School	108	109
St. Mary's School	82	122 and
	C C	32 infants.

The Pensioners' School, Poons.

The Pensioners' School at Poona, in the management of which the ('haplains of the Church of England are associated with the Presbyterian Chaplain and the Minister of the Free Church of Scotland, has taken possession of the new buildings erected for it in the course of the last year, the trusteeship of which for the purposes of an undenominational school is to be vested in the Bishop as being a Corporation sole.

Stationery.

The value of stationery received amounted to Rs. 1,75,000 and the value of that which was issued to the different departments was Rs. 2,16,000, which is nearly half a lákh less than the value issued in the previous year. The use of half-bleached paper for envelopes has been enforced, white blotting-paper has been procured from the Girgaon Paper Mills, and measures are in progress to carry out the orders of the Government of India to substitute articles of Indian manufacture for English articles wherever practicable with economy.

General Miscellaneous.

GOVERNMENT CENTRAL PRESS.

The financial results of the working of the Government Central Press for the year are:—

			Ks.
Amount credited	•••	•••	3,23,340
Amount debited		•••	2,12,809
Balance in favour of the	e Press		1.10.531

equivalent to a profit of nearly 78½ per cent. upon the capital stock valued at Rs. 1,40,372, and Rs. 30,708 more than in the previous year. The increase during the year under review in the amount credited to the Press was considerable, and took place under every head excepting two, viz., "railway and forwarding charges debited" and "adjustment for work done".

Under expenditure there was an increase during the year in the charges for establishment, piece-work, over-time, contingent expenses, paste-boards and postage. The increase under piecework and over-time charges is the necessary result of the increase of work. The increased expenditure for paste-boards was due to more binding work having been executed during the year and to the rate charged for the boards being nearly double that of the preceding year.

During the year more letter-founding was done, to the great convenience of the Press and saving to Government.

The cost of the work done for different departments and officers of Government was Rs. 2,96,453 and the value of paper consumed was Rs. 1,02,163, being Rs. 10,919 in excess of that used in the previous year.

COMMISSIONER'S PRESS IN SIND.

The value of the work done at the Press amounted to Rs. 17,551 and was less by Rs. 7,880 than the work done in 1880-81. The cash receipts from job work showed a decrease, but receipts from the sale of the Sind Official Gazette nearly doubled. The premises have been enlarged by the addition of a large room, and a new printing machine has been added to the stock.

PHOTOZINCOGRAPHIC OFFICE.

The total number of maps printed was 1,374 against 2,499 in the proceeding year, and the number of copies struck off was 92,237. The decrease of work is attributed to the village maps of the Mysor Survey being no longer printed at this office. The expenditure was Rs. 38,406, and the work turned out is valued at Rs. 39,207, which shows that the department just clears its expenses.

PART III.

STATISTICAL RETURNS.

CHAPTER III.—PROTECTION. A.—LEGISLATIVE (ACTS).

(1.)—Statement of Acts passed by the Legislature of the Presidency of Bombay in 1881-82 (between 1st April 1881 and 31st March 1882) and sanctioned, as required by law.

Date of Sanction.	His Excellency the Governor of Bombay's assent, 10th February 1881. His Excellency the Viefroy and	Governor-veneral is assent, full April 1881. His Excellency the Governor of Bombay's assent, 8th April 1881. His Excellency the Viceroy and Taylor of the Wassent, 17th May 1881.	His Excellency the Governor of Bombay's assent, 20th July 1881. His Excellency the Viceroy and	John August 1881.	,		P	His Excellency the Vicercy and Governor General's assent, 23rd September 1881.
Object and Character of the Act.	The Honourable The object and character of this Act have been fully described at page His Excellency the Governor of L. B. Ashburn- xxxv of the Appendices to the General Administration Report for Bombay's assent, 10th February 1881. His Excellency the Cioffoy and Frience Appendices to the Governor of Bombay's assent, 10th February 1881.	The Honourable The object and character of this Act have been fully described at pages C. G. Kemball. xxxviii and xxxix of the Appendices to the General Administration Report for 1880-81.	The Honourable There is now due to the Secretary of State for India in Council in His Excellency the Governor of E. W. Ravens respect of momes advanced for the construction of the Prince's Dock, Bombay's assent, 20th July croft. Bombay, and the works connected therewith, 76 lakin of rupees. This 1881. Both Annal of the Prince's Dock, Both Annal Office of the Council of the Price of the Price of the July and croft.	34 of the Bombay Port Trust Act, 1819. The Trustees of the Port of Bombay believe they can borrow in the open market of lakhs on security of debentures bearing 4 per cent interest, which would effect a saving to the Trust of Rs. 38,000 per interest, which would effect a saving to the Trust of Rs. 38,000 per	annum The Secretary of State is willing to be repaid the 76 lakhs It is also desirable to empower the Trustees to borrow money for the purpose of paying off any existing or future loans, as and when they may deem it expedient so to do, with the previous consent of Govern-	ment. An opportunity is taken to amend the Port Trust Act by authorising the signature of the Chairman of the Trustees to be engraved, lithographed or unpressed on coupons attached to debentures issued under graphed or unpressed on coupons attached to	4 F	
By whom proposed	The Honourable L. R. Ashburn- er,	The Honourable C. G. Kemball.	The Honourable E. W. Ravens- croft.					
Title of Act.	Act No. I. of 1881. An Act to amend the Bombay Port Trust Act, 1879.	Act No. II of 1881. An Act to confirm the jurisdiction of Presidency Magistrates in Municipal cases.	Act No. III. of 1881. An Act to further amend the Bombay Port Trust Act, 1879.		,		Act No. IV of 1881. An Act	to provide for the appround ment and maintenance of C Village Officers in Sind.

A.—LEGISLATIVE (ACTS)—continued.

24	,		
Title of Act.	By whom proposed.	Object and Character of the Act	Date of Sanction.
Act No. V of 1881. An Act to amend the Law relating to Tolls on Roads and Bridges in the Presidency of Bombay.	The Honourable L. R. Ashburn- er,	As there is no provision in Bombay Act III. of 1875 empowering the Governor in Council to lease the levy of tolls at the rates specified in the Schedule annexed to the Act, and investing the lessess and their agents with the powers and responsibilities of toll collectors appointed under the Act, two snottons have been framed to meet this want, to be inserted between Sections 9 and 10 of the Act; while a necessary amendment has been made in the present Section 10 of the Act to	His Excellency the Governor of Bombay's assent, 20th July 1881. His Excellency the Viceroy and Governor General's assent, 5th October 1881.
Act No. I. of 1882. An Act T for the repeal of (Rombay) Act No. VII. of 1878.	The Honourable E W. Ravens- croft.	The Governor General paying declared his intention of withholding his Bix ellency the Governor General paying declared his intention of withholding his Bonbay S. o. 1880, Bonbay S. assent from Bill No. 3 oi 1880 (the Bonbay Cotton Frault Act, 1880). Bonbay S. assent, 22nd Februate object of which Bill was, while repealing Bonbay Act VII. of 1875. ary 1882. to re-enact with certain modifications Bombay Act IX of 1863; the His Excellency the Viceroy and effect of the veto will be that Bombay Act VII of 1878 will be kept. Governor General's assent, 17th alive.	His Excellency the Governor of Bombay's assent, 22nd February 1882. His Excellency the Viceroy and Governor General's assent, 17th March 1882.
•		Her Majesty's Secretary of State for India in Council having intimated that he has no objection to the introduction of a fresh Bill repealing all former special legi-slation on the subject of cotton frauds, this present Bill has been prepared for the purpose of repealing the only Act which is now in force relating to extend india and is the only special legis.	
Act No. II. of 1882. An Act to amend Bombay Act II. of 1874.	-		His Excellency the Governor of Bombay's assent, 22nd February 1882. His Excellency the Viceroy and Governor General's assent, 17th
Act No. III of 1882. An Act to amend the Bombay and Karáchi Vaccination Acts.		It has been found in practice that in the case of a person who may have a reasonable excuse, such as illness of the child or other unavoidable cause, for not producing a child for inspection at the eighth day after raccination or on some earlier day appointed for the purpose, there is no provision of the law under which such person may be required to produce the child for inspection at eighth day; consequently in many occases.	March 1992. Bombay 8 assent, 22nd February 1882. Hris Excellency the Vicercy and Governor General's assent, 17th March 1882.
		the proper working of the Vacenation Law will be impaired. It is proposed, therefore, by a very simple amendment in Section 8 of the Bombay and Kazichi Vacenation Acts, which are the only two Vaconation Acts in force in this Presidency, to remedy this defect, and to render it possible for the public vacenator or medical practitioner to appoint any earlier or later day than the eighth for the inspection of a child he has vacenated. As Section 8 is the same in each of the said Acts, there is no difficulty in amending both Acts in the manner required by one and the same Amendment Act.	r

A.—LEGISLATIVE (BILLS).

(2.)—Statement of Bills proposed and pending in the Legislature of the Presidency of Bombay in 1881-82.

Title of Bill	By whom proposed.	Object and Character of the Bill.	When introduced	When rejected or withdrawn.	When rejected If pending, why and or withdrawn.
Bill No. 9 of 1878. A Bull to amend the law for the periodical inspection and the management by competent Engineers of Steam Boilers and Prime Movers in the Presidency of Bombay.	The Honourable E. W. Ravens- croft.	The object and character of this Bill have been fully described at pages xxiv and xxv of the Appendices to the Administration Report for 1878-79.	28th November 1878.	:	The Bill has been introduced by publication in the Government Gazette. It has been decided not to proceed with the Bill for with the Bill for with the wealth of the weal
Bill No. 5 of 1881. A Bull to amend Bombay Act III. of 1874.		The Honourable This Bill, which is introduced in substitution for the 4th Bill No. 2 of 1881, proposes to repeal Bombay Act III. of 1881 1874 entirely. Except sections 10 and 13, its principal feature is Part V., relating to "Selection Watans," in which an entirely new procedure for the selection and appointment of officiacy. Is introduced. This procedure has a great advantage over that laid down in Bombay Act III. of 1874 in that it is simple and easily intelligible, and that it accords with the ancient system of appointment in the great majority of hereduting offices. It is proposed, therefore, to declare it application of the official and a feature of the official and a feature of the official and a feature of the official and a feature of the official and a feature of the official and a feature of the official and to all kulkarins within soil but in the remaining kulkarns watans, i.e., in "non-selection watans", the procedure of Bombay Act III. of 1874 will still be kept in force, and to prevent confusion all the provisions distinctively applied to such watans have been brought together in Part VI. of the Bill. These arrangements have necessitated an entire re-cast of the frame of the present Act, and the opportunity has been taken of amending and simplifying its language. Most of the changes proposed in the Bill No. 2 of 1881 have also been inserted in their appropriate places in the present Bill, and a few others have been added, notably Section 6, by which it is proposed to take power to levy a cess for the pur-	4th April 1831.	:	sent. It has been decided by the majority of the Executive Council not to proceed with the bill in its present form.

A.—LEGISLATIVE (BILLS)—continued.

When rejected or withdrawn.	The Bill has since received the assent of His Excellency the Viceroy and Governor General and has been published as Bonnbay as Bonnb
When rejected or withdrawn.	
When introduced.	30th June 1881,
Object and Character of the Bill	officiator in any village in which a new watan is created, and Section 62 by which it is proposed to take away the right of appeal against any order of the Collector under the Act. The power which is still reserved to Government, under section 63 of the Bill to call for and review proceedings is thought to afford quite sufficient safeguard against improper decisions or irregularities. The reason for not repealing Sections 10 and 13 is that although the Council of the Governer of Bombay might repeal those Sections it is thought doubtful whether it would be competent to re-enact them. If, therefore, the present Bill passes into law, it is intended to move the Government of India to take measures for repealing sections 10 and 13 and for re-enacting them as a part of the Bombay Jurisduction Act in a shape suitable to the requirements of the new law. The present Sections 17 and 18 of Act XIVIII. of 1860 relate 30th trade only; and although wholesale dealers who fraudulently to the fraudulent use of false weights and measures in retail trade only; and although wholesale dealers who fraudulent, to obtain, because the Police have no power to seaze such weights and measures. Consequently, it is desirable that the penalty provisions of Section 17 should be expunged, as all cases of the fraudulent use of false weights and measures in wholesale or retail transactions, can be dealt with under the Indian Penal Code. As regards the latter part of the present Section 17, it is only meessary to provide for the custody ought properly to be that of the Presidence Act, 1872, as to standard weights and measures, and such custody ought properly to be defided on evidence. The present Section 18 has been redrafted with necessary alterations and omissions as to what class of Police officers should have power to serze false weights and measures, while the last provision of the section is one redrafted with necessary alterations and one such as been draudulently used as questions of sets of the markets. Then new Section 18 has been de
